NADA Number: 125-933	
Trade Name	Romet®-30
Sponsor	Pharmaq AS
Ingredients	Sulfadimethoxine Ormetoprim
Species	**FISH** (Catfish, reared) **FISH** (Salmonids, reared)
Routes of Administration	Per Os
Dosage Form	Medicated feed
Dispensing Status	OTC
Patent Number (Expiration Date)	3903275 (No Expiration Date)
Dosage Amount, Indications & Limitations	558.575 Sulfadimethoxine, ormetoprim. Specifications: Type A medicated articles: 25 percent sulfadimethoxine and 5 percent ormetoprim. Conditions of use: Salmonids Amount: 50 milligrams of active ingredients per kilogram of body weight per day. Indications: For the control of furunculosis in salmonids (trout and salmon) caused by Aeromonas salmonicida strains susceptible to sulfadimethoxine and ormetoprim combination. Limitations: Administer for 5 consecutive days. Withdraw 42 days before release as stocker fish or slaughter. Catfish Amount: 50 milligrams of active ingredients per kilogram of body weight per day. Indications: For control of enteric septicemia of catfish caused by Edwardsiella ictaluri strains susceptible to sulfadimethoxine and ormetoprim combination. Limitations: Administer for 5 consecutive days. Withdraw 3 days before slaughter or release as stocker fish.
Tolerances	Ormetoprim: A tolerance of 0.1 part per million is established for negligible residues of ormetoprim in the edible tissues of chickens, turkeys, ducks, salmonids, and catfish. Sulfadimethoxine: Tolerances are established for residues of sulfadimethoxine in edible products of animals as follows: a. Chickens, turkeys, cattle, ducks, salmonids, catfish and chukar partridges: 0.1 part per million (negligible residue) in uncooked edible tissues b. Milk: 0.01 part per million (negligible residue).Tolerances are established for residues of sulfadimethoxine in edible products of animals as follows: a. Chickens, turkeys, cattle, ducks, salmonids, catfish and chukar partridges: 0.1 part per million (negligible residue) in uncooked edible tissues b. Milk: 0.01 part per million (negligible residue).
