Dear Mr. Emerson:

Please refer to your Supplemental New Drug Application (sNDA) dated and received July 13, 2015, submitted under section 505(b) of the Federal Food, Drug, and Cosmetic Act (FDCA) for Prestalia (perindopril arginine/amlodipine besylate) 3.5/2.5 mg, 7/5 mg, and 14/10 mg Tablets.

This supplemental new drug application provides for labeling revised as follows:

1. Under **WARNINGS AND PRECAUTIONS**, the following text was added:

***Head and Neck Angioedema:*** Angioedema of the face, extremities, lips, tongue, glottis, and larynx has been reported in patients treated with ACE inhibitors (0.1% of patients treated with perindopril in U.S. clinical trials). Angioedema associated with involvement of the tongue, glottis or larynx may be fatal. In such cases, discontinue perindopril treatment immediately and observe until the swelling disappears. When involvement of the tongue, glottis, or larynx appears likely to cause airway obstruction, administer appropriate therapy, such as subcutaneous epinephrine solution 1:1000 (0.3 to 0.5 mL), promptly.

Patients taking concomitant mTOR inhibitor (e.g. temsirolimus) therapy may be at increased risk for angioedema. [see Drug Interaction (7)]

2. Under **DRUG INTERACTIONS**, the following text was added:

**Prestalia**

The pharmacokinetics of perindopril and amlodipine are not altered when the drugs are co-administered.

No drug interaction studies have been conducted with PRESTALIA, although studies have been conducted with perindopril and amlodipine.

**mTOR Inhibitors:** Patients taking concomitant mTOR inhibitor (e.g. temsirolimus) therapy may be at increased risk for angioedema. [see Warnings and Precautions (5.2)]

3. The revision date was updated.

There are no other changes from the last approved package insert.
