WITH MEXORYL™ SX (ECAMSULE): BROAD SPECTRUM UVA/UVB PROTECTION

UVA and UVB rays may increase the risk of skin cancer. UVA rays can diminish the skin's natural protective mechanism. The cumulative effects of exposure to UVA can cause an alteration to the skin structure leading to wrinkles, loss of firmness and the appearance of age spots. UVB rays may also contribute to premature skin aging.

CAPITAL SOLEIL 20's innovative formula combines a unique UVA filter, Mexoryl™ SX (ecamsule), with Parsol® 1789 (avobenzone) to create a new concept in sun protection. **CAPITAL SOLEIL 20** with Mexoryl™ SX protects against both long and short UVA rays, while also providing UVB protection against sunburn. The skin is protected, moisturized and healthy-looking.

Active ingredients: Avobenzone* 2%, Ecamsule** 2%, Octocrylene 10%, Titanium dioxide 2%.

Uses: Helps prevent sunburn. Higher SPF gives more sunburn protection. Retains SPF after 40 minutes of activity in the water or perspiring. Helps provide protection from UVA rays (short and long wavelengths).

Warnings: For external use only. Do not use on broken skin or serious burns. When using this product, keep out of eyes. Rinse with water to remove. Stop use and ask a doctor if rash or irritation develops and lasts. Keep out of reach of children. If swallowed, get medical help or contact a Poison Control Center right away.

Directions: Apply liberally 15 minutes before sun exposure. Reapply after 40 minutes of swimming or perspiring and after towel drying. Children under 6 months of age: ask a doctor.

ULTRAVIOLET RAYS UVA AND UVB

UV rays may contribute to premature skin aging
UVB rays cause sunburn
UVA and UVB rays may increase the risk of skin cancer

UVA rays have been shown to penetrate deeper into the skin, damaging the elasticity of the tissue which may accelerate the aging of the skin. The two types of UVA rays, UVA short and UVA long, penetrate the skin at different levels. UVB rays may also contribute to premature skin aging. UVA and UVB rays may lead to the increased risk of developing skin cancer.

DAMAGE CAUSED AT SURFACE LEVEL AND DEEP WITHIN SKIN TISSUE

What does SPF mean?

SPF, or "Sun Protection Factor", is the degree of protection a sunscreen offers against UVB rays which cause sunburn.

Repeated exposure of unprotected skin to the sun may increase the risk of skin cancer, even if you don't burn.

SUN ALERT

Limiting sun exposure, wearing protective clothing, and using sunscreens may reduce the risks of skin aging, skin cancer, and other harmful effects of the sun.

UV Rays Revealed
Ultraviolet (UV) light is energy from the sun that cannot be seen, but its effects can be observed. Unprotected exposure to UVA and UVB rays can increase the risk of skin cancer. These rays may also cause premature skin aging such as the appearance of wrinkles, age spots and loss of firmness.

UVA rays have the power to penetrate deep into the skin and may cause harm to the elastin and collagen fibers that make skin supple and firm.

UVB rays are the "burning" rays. Overexposure can result in sunburn, but even casual exposure to UVB rays may cause damage to the skin's DNA, which is one of the foremost causes of skin cancer.

Sun Alert:
Limiting sun exposure, wearing protective clothing, and using sunscreens may reduce the risks of skin aging, skin cancer, and other harmful effects of the sun.

SUN ALERT:

SUN ALERT: LIMITING SUN EXPOSURE, WEARING PROTECTIVE CLOTHING, AND USING SUNSCREENS MAY REDUCE THE RISKS OF SKIN AGING, SKIN CANCER, AND OTHER HARMFUL EFFECTS OF THE SUN.

This water-resistant UV protection cream combines two UVA filters, Parsol® 1789* (avobenzone) and Mexoryl™ SX† (ecamsule), to help provide UVA protection from the sun. Our fragrance-free face and body sunscreen provides UVA and UVB broad spectrum protection suitable for even sensitive skin. This sweat and water-resistant formulation protects up to 40 minutes after activity in the water. This formula was dermatologist-tested.

UVA rays penetrate deep into the skin and may contribute to skin damage and premature skin aging, and may damage the collagen and elastin fibers which firm skin. UVB rays may also contribute to premature skin aging. It is important to decrease UV exposure by limiting time in the sun, wearing protective clothing, and using a sunscreen.

UVB + UVA Filtering System

Our formula, with patented filtering technology, offers protection from UVB rays (290-320 nm) with Octocrylene; short UVA rays (320-340 nm) with Mexoryl™ SX (ecamsule); and long UVA rays (340-400 nm) with Parsol® 1789 (avobenzone). These sun filters absorb either UVA or UVB rays. Titanium Dioxide absorbs, reflects, and scatters UVA and UVB rays. The ideal sun protection is one that filters the widest spectrum of UVA and UVB rays.

SECONDARY BACK PANEL

ANTHELIOS 20 helps provide protection from UVA rays.

How does Mexoryl™ SX (ecamsule) protect skin from UVA rays?

Parsol® 1789 (avobenzone) is very effective at the midpoint of the UVA spectrum, but provides less protection against short UVA wavelengths. **Mexoryl™ SX (ecamsule)** provides peak efficacy against these short UVA rays.

The combination of Parsol® 1789 (avobenzone) and Mexoryl™ SX (ecamsule) helps provide UVA protection.

Octocrylene, Mexoryl™ SX (ecamsule) and Parsol® 1789 (avobenzone) absorb UV rays; titanium dioxide absorbs, reflects and scatters UV light.

Sun alert: Limiting sun exposure, wearing protective clothing, and using sunscreens may reduce the risks of skin aging, skin cancer, and other harmful effects of the sun.

0.5 pt hairlines

Gill Sans 6 pt

Even if you do not burn, repeated exposure of unprotected skin while tanning may increase the risk of skin aging, skin cancer, and other harmful effects to the skin.

UVA rays, a daily skin concern:

UVA rays have been shown to penetrate deeper into the skin, damaging its elasticity and contributing to premature skin aging.

U.V. rays, often a short concern:

UVB rays cause sunburn and also contribute to premature skin aging.

SPF, or "Sun Protection Factor," is the degree of protection a sunscreen offers against UVB rays.
