These new drug applications provide for the use of APTIVUS (Tipranavir capsules or oral solution), co-administered with ritonavir, for combination antiretroviral treatment of HIV-1 infected pediatric (age 2 to 18 years) patients who are treatment-experienced and infected with HIV-1 strains resistant to more than one protease inhibitor.

We have completed our review of these applications, as amended. They are approved, effective on the date of this letter, for use as recommended in the enclosed agreed-upon labeling text.

Upon receipt, we will transmit that version to the National Library of Medicine for public dissemination. For administrative purposes, please designate this submission, "SPL for approved NDA21-814 and 22-292."
