# **RISK ASSESSMENT and RISK MITIGATION REVIEW(S)**

### Department of Health and Human Services Public Health Service Food and Drug Administration Center for Drug Evaluation and Research Office of Surveillance and Epidemiology Office of Medication Error Prevention and Risk Management

### FINAL RISK EVALUATION AND MITIGATION STRATEGY (REMS) MODIFICATION REVIEW

Date:	August 13, 2015
Reviewers:	Danny S. Gonzalez, Pharm.D., M.S. Division of Risk Management
	Joan Blair, R.N., M.P.H. Health Communications Analyst, DRISK
Team Leader:	Kim Lehrfeld, Pharm.D., BCPS DRISK
Acting Deputy Division Director	Reema Mehta, Pharm.D., M.P.H. DRISK
Drug Name(s):	OxyContin (oxycodone hydrochloride)
Therapeutic Class:	Opioid Agonist
Dosage and Route:	10 mg, 15 mg, 20 mg, 30 mg, 40 mg, 60 mg, and 80 mg extended-release oral tablet
Application Type/Number:	NDA 022272
Applicant/sponsor:	Purdue Pharmaceuticals, LP

\*\*\* This document contains proprietary and confidential information that should not be released to the public. \*\*\*

### **1 INTRODUCTION**

The purpose of this review is to document the Division of Risk Management's (DRISK) evaluation of a proposed modification to the risk evaluation and mitigation strategy (REMS) for the extended release and long-acting (ER/LA) opioid analgesic REMS for OxyContin (oxycodone hydrochloride) (NDA 022272). On December 10, 2014, Purdue Pharmaceuticals, LP (Purdue) submitted prior approval supplement-0027 (PAS-0027) proposing to extend the current indication to pediatric patients 11 years of age and older. Initially, the Sponsor proposed changes only to the labeling and did not propose changes to the ER/LA Opioid Analgesic REMS. On July 30, 2015, the Sponsor was informed of the need to modify the ER/LA REMS and amended PAS-0027 on July 31, 2015 to include a proposed REMS modification. The Sponsor is currently a member of the REMS Program Companies (RPC) and will continue to market their product under the single, shared system ER/LA Opioid Analgesic REMS.

### 1.1 BACKGROUND

Oxycodone hydrochloride (HCl) is an opioid agonist indicated for the management of pain severe enough to require daily, around-the-clock, long-term opioid treatment and for which alternative treatment options are inadequate. The brand name for this product is OxyContin, which is part of the ER LA opioid analgesic drug class. OxyContin (oxycodone HCl) (NDA 22272) 10 mg, 15 mg, 20 mg, 30 mg, 40 mg, 60 mg, and 80 mg extended-release oral tablet strengths were approved on April 5, 2010.

In February 2009, FDA notified Sponsors of ER/LA opioid analgesics that their products would require a REMS to ensure that the benefits of those products continued to outweigh their risks.

On July 9, 2012, FDA approved a single, shared system REMS for ER/LA opioid analgesic drug products.<sup>1</sup> The ER/LA Opioid Analgesics REMS was approved with the following elements:

- Medication Guide
- Elements to Assure Safe Use
  - Prescriber Training
- Timetable for Submission of Assessments

The REMS includes ER and LA opioid analgesic brand name and generic products indicated for the management of pain severe enough to require daily, around-the-clock, long-term opioid treatment and for which alternative treatment options are inadequate formulated with the following active ingredients: buprenorphine, fentanyl, hydrocodone, hydromorphone, methadone, morphine, oxycodone, oxymorphone, and tapentadol.

<sup>&</sup>lt;sup>1</sup>Details of the regulatory history, development, and rationale for the design of the REMS and REMS materials of the ER/LA Opioid Analgesic REMS are discussed in the Executive Memorandum, dated July 6, 2012.

### 1.2 REGULATORY HISTORY

The following is a summary of the regulatory history relevant to the proposed modification to the ER/LA Opioid REMS submitted under PAS -0027:

**December 10, 2014:** The Sponsor submitted the Pediatric Study Report as part of PAS-0027; eCTD Seq. No. 0224 and requested 6 months of pediatric exclusivity. This submission supported their Pediatric Exclusivity Request and included proposed, revised prescribing information related to the proposed pediatric indication. The submission did not include a proposed ER/LA Opioid Analgesic REMS modification.

**May 18, 2015:** The Sponsor submitted a revised version of section 12.3 (Pharmacokinetics) of the Full Prescribing Information including additional pediatric data. The Sponsor did not submit include a proposed ER/LA Opioid Analgesic REMS modification.

June 8, 2015: The Agency's		(b) (4)
	or PAS-0027.	
June 10, 2015: The Agency		<sup>(b) (4)</sup> for PAS-

0027.

**June 18, 2015:** The Agency issued, via email, an updated version of the OxyContin prescribing information (PI) which included the proposed pediatric indication.

**June 25, 2015:** The Sponsor submitted an amendment to the previous Agency IRs which summarized their commitment to conduct post-marketing requirements (PMR) including a drug utilization study (PMR #2923-1) and a post-market adverse event and medication error report (PMR # 2923-2) (PAS-0027; eCTD Seq. No. 254).

**July 30, 2015:** The Agency issued, via email, comments to the Sponsor regarding modifications to the ER/LA REMS document and materials. The recommended modifications were reviewed by DRISK, DAAAP, and OPDP.

**July 31, 2015:** The Sponsor submitted final REMS materials (PAS-0027; eCTD Seq. No. 0262), via the Gateway, for the Agency's review. The Sponsor accepted all the FDA changes and added one proposed revision to Patient Counseling Document to accommodate average patient understanding. These materials are the focus of this review.

### 2 MATERIALS REVIEWED

### 2.1 SUBMISSIONS

• Purdue Pharma, LP. Proposed ER/LA Opioid REMS Materials. Submitted via Gateway July 31, 2015 (PAS-0027; eCTD Seq. No. 0262).

### 2.2 MATERIALS INFORMING THIS REVIEW

The following is a list of materials that informed our review:

- Purdue Pharma, LP. Prescribing Information for OxyContin. Submitted via email June 15, 2015 (PAS-0027)
- Purdue Pharma, LP. Extended Release and Long Acting Opioid Analgesics REMS. Approved June 26, 2015.

- Lee K. OPDP REMS Review for OxyContin, July 24, 2015.
- Walker M. and Lee K. Patient Labeling Review, May 27, 2015.
- Gonzalez D. DRISK REMS Modification Review for OxyContin, August 13, 2015.
- Purdue Pharma, LP. Pediatric Exclusivity Determination Request for OxyContin. Submitted December 10, 2014 (PAS-0027; eCTD Seq. No. 0224)

### **3 RESULTS OF REVIEW OF THE PROPOSED REMS**

### 3.1 REMS DOCUMENT

The Sponsor did not propose changes to the REMS document.

### **3.2 REMS APPENDED MATERIALS**

### 3.2.1 ER/LA Opioid REMS Blueprint

The Sponsor incorporated the changes to the ER/LA REMS Blueprint provided by the Agency on July 30, 2015. The Sponsor did not propose additional changes; therefore, DRISK finds the Blueprint acceptable.

### 3.2.2 Patient Counseling Document (PCD)

The Sponsor proposed changing the phrase, "A child has unintentionally taken this medicine" to "A child has taken this medicine by accident." DRISK and DAAAP have agreed that this language will help patients and caregivers better understand the intended message. Therefore, the proposed change is acceptable.

### 3.2.3 ER/LA REMS Website

The Sponsor incorporated the changes to the ER/LA REMS Website provided by the Agency on July 30, 2015. The Sponsor did not propose additional changes; therefore, DRISK finds the Blueprint acceptable.

### 3.2.4 Timetable for Submission of Assessments

The Sponsor did not propose changes to the timetable for submission of assessments.

## 3.2.5 Assessment Plan

The Sponsor did not propose changes to the REMS assessment plan.

## 4 **DISCUSSION**

The Sponsor submitted a proposed REMS modification on July 31, 2015 based on the Agency's comments received during the review of PAS-0027. DRISK finds the proposed ER/LA Opioid REMS materials (attached) acceptable; therefore, DRISK recommends approval of the REMS appended to this review.

### 5 CONCLUSION

In conclusion, the proposed REMS modification to incorporate the pediatric indication for OxyContin, received July 31, 2015, contains the appropriate and agreed upon revisions to the REMS as stipulated by the Agency. Therefore, the modified ER/LA Opioid REMS for OxyContin is acceptable and the Office of Surveillance and Epidemiology, DRISK recommends approval.

### **6 RECOMMENDATIONS FOR THE REVIEW DIVISION**

DRISK recommends approval of the ER/LA Opioid REMS for OxyContin (oxycodone hydrochloride) (NDA 022272), received July 31, 2015 and as appended to this review.

A REMS Modification Notification Letter should be sent to the other members of the ER/LA Opioid REMS to request the inclusion of these changes in their respective REMS.

### APPENDIX

1. ER/LA Opioid Analgesic REMS Document and REMS Appended Materials

Initial REMS Approval: 07/2012 Most Recent Modification: 08/2015

### EXTENDED-RELEASE (ER) AND LONG-ACTING (LA) OPIOID ANALGESICS RISK EVALUATION AND MITIGATION STRATEGY (REMS)

#### GOAL

The goal of this REMS is to reduce serious adverse outcomes resulting from inappropriate prescribing, misuse, and abuse of extended-release or long-acting (ER/LA) opioid analgesics while maintaining patient access to pain medications. Adverse outcomes of concern include addiction, unintentional overdose, and death.

#### I. REMS ELEMENTS

#### A. Medication Guide

A Medication Guide will be dispensed with each ER/LA opioid analgesic prescription in accordance with 21 CFR  $\S$  208.24.

The Medication Guides for ER/LA opioids are part of the ER/LA Opioid Analgesic REMS program and will be available through the ER/LA Opioid Analgesic REMS website <u>www.ER-LA-opioidREMS.com</u>.

### B. Elements to Assure Safe Use

- Training will be made available to healthcare providers who prescribe ER/LA opioid analgesics.
  - a. Training will be considered "REMS-compliant training" under this REMS if: 1) it, for training provided by CE providers, is offered by an accredited provider to licensed prescribers, 2) it includes all elements of the FDA Blueprint for Prescriber Education for Extended-Release and Long-Acting Opioid Analgesics ("FDA Blueprint"), 3) it includes a knowledge assessment of all of the sections of the FDA Blueprint, and 4) it is subject to independent audit to confirm that conditions of the REMS training have been met.
  - b. The NDA/ANDA holders of ER/LA opioid analgesic products ("NDA/ANDA holders") will ensure that REMS-compliant training is made available to prescribers of ER/LA opioid analgesics and will achieve the following performance goals:
    - i. Not later than March 1, 2013, the first REMS-compliant training will be made available.
    - Within two years from the time the first REMS-compliant training becomes available, 80,000 prescribers (based on 25% of the 320,000 active prescribers in 2011) will have been trained;
    - iii. Within three years from the time the first REMS-compliant training becomes available, 160,000 prescribers (based on 50% of the 320,000 active prescribers in 2011) will have been trained;
    - iv. Within four years from the time the first REMS-compliant training becomes available, 192,000 prescribers (based on 60%)

of the 320,000 active prescribers in 2011) will have been trained.

- c. The content of the REMS-compliant training will be based on the learning objectives established by the FDA Blueprint. The FDA Blueprint contains core messages to be conveyed to prescribers in the training about the risks and appropriate prescribing practices for the safe use of ER/LA opioid analgesics. The NDA/ANDA holders will direct providers of REMS-compliant training to the FDA Blueprint, via the REMS website (www.ER-LA-opioidREMS.com), and via its Request for Grant Applications. No less than annually, NDA/ANDA holders will direct providers of REMS-compliant training to consult the FDA Blueprint for possible revisions (e.g., changes to the drug specific information).
- NDA/ANDA holders will ensure that independent audits of the educational materials used by the providers of REMS-compliant training are conducted. The audits must:
  - Be conducted by an auditor independent of the NDA/ANDA holders. (Accreditation bodies of CE providers would be considered independent of the NDA/ANDA holders and would be eligible to conduct the audits.)
  - ii. Evaluate:
    - whether the content of the training covers all components of the <u>FDA Blueprint</u> approved as part of the REMS;
    - whether the knowledge assessment measures knowledge of all sections of the FDA Blueprint; and
    - 3. for training conducted by CE providers, whether the training was conducted in accordance with the standards for CE of the Accreditation Council for Continuing Medication Education<sup>®</sup> (ACCME<sup>®</sup>), or of another CE accrediting body appropriate to the prescribers' medical specialty or healthcare profession.
  - iii. Be conducted on a random sample of 1) at least 10% of the training funded by the NDA/ANDA holders, and 2)
     REMS-compliant training not funded by the NDA/ANDA holders but that will be counted towards meeting the performance goals in section <u>B.1.b</u>.
- e. To facilitate prescriber awareness of the availability of the REMS and REMS-compliant training, within 30 calendar days of the approval of the REMS, the NDA/ANDA holders will make available, and then

maintain a web site that will contain information about the REMS specified below (www.ER-LA-opioidREMS.com):

- A current list of the REMS-compliant training that is supported by educational grants from the NDA/ANDA holders, when this information becomes available.
- ii. A copy of the Patient Counseling Document (PCD) on Extended-Release/Long-Acting Opioid Analgesics.
- iii. A copy of the Prescriber Letters 1, 2, and 3 (when mailed and for at least one year thereafter) (see section B.1.f).
- f. To make prescribers aware of the existence of the REMS and the prescriber training that will be made available under the REMS, the NDA/ANDA holders will electronically deliver (email or fax), or directly mail letters to all DEA-registered prescribers who are registered to prescribe Schedule II and III drugs:
  - i. <u>Prescriber Letter 1</u> will be sent not later than 60 days after the initial approval of this REMS, notifying prescribers of the existence of the REMS and the fact that prescriber training will be offered, and providing a copy of the Patient Counseling Document (PCD).
  - ii. <u>Prescriber Letter 2</u> will be sent not later than 30 days before the first prescriber REMS-compliant training required by the REMS is offered by providers and will notify prescribers of the imminent upcoming availability of accredited REMS CE courses.
  - iii. The prescribers will be identified via the DEA Registration Database.
  - iv. At least annually from the date of initial approval of the REMS, the DEA Registration Database will be reviewed and <u>Prescriber</u> <u>Letter 3</u> will be sent to all newly DEA-registered prescribers who are registered to prescribe Schedule II and III drugs to inform them of the existence of the REMS, provide them the <u>Patient Counseling Document (PCD)</u>, and notify them of the availability of the REMS-compliant training and how to find REMS-compliant courses.
- g. To further ensure that prescribers are aware of the existence of the ER/LA Opioid Analgesic REMS and the prescriber training that will be made available under the REMS, the NDA/ANDA holders will electronically deliver (email or fax), or directly mail the following two letters to the professional organizations and state licensing entities listed in section <u>B.1.g.iii</u> with a request that the information be disseminated to their members:

	<u>Professional Organization/Licensing Board Letter 1</u> will be sent not later than 60 days after the approval of this REMS, notifying prescribers of the existence of the REMS and the fact that prescriber training will be offered, and providing a copy of the <u>Patient Counseling Document (PCD) on</u> <u>Extended-Release/Long-Acting Opioids</u> .
ii.	<u>Professional Organization/Licensing Board Letter 2</u> will be sent not later than 30 days before the first prescriber REMS- compliant training required by the REMS is offered by providers and will notify prescribers of the imminent upcoming availability of accredited REMS CE courses.
iii.	The letter and enclosures referenced above, will be sent to the following entities:
	a) State Licensing Boards of:
	1) Medicine (allopathic and osteopathic)
	2) Nursing
	3) Dentistry
	b) Associations of State Licensing Boards:
	1) Federation of State Medical Boards
	2) National Council of State Boards of Nursing
	3) American Association of Dental Boards
	<li>c) Learned Societies and Professional Associations, including, but not limited to:</li>
	1) American Academy of Addiction Psychiatry
	2) American Academy of Family Physicians
	3) American Academy of Hospice and Palliative Medicine
	4) American Academy of Neurology
	5) American Academy of Nurse Practitioners
	6) American Academy of Nursing
	7) American Academy of Orofacial Pain
	8) American Academy of Pain Management
	9) American Academy of Pain Medicine
	10) American Academy of Physical Medicine and Rehabilitation
	11) American Academy of Physician Assistants

12) American Association of Colleges of Osteopathic Medicine
13) American Association of Colleges of Nursing
14) American Association of Poison Control Centers
15) American Board of Medical Specialties
16) American Board of Orofacial Pain
17) American College of Nurse Practitioners
18) American College of Osteopathic Family Physicians
19) American College of Physicians
20) American College of Rheumatology
21) American Dental Association
22) American Dental Education Association
23) American Medical Association
24) American Medical Directors Association
25) American Nurses Association
26) American Nurses Credentialing Center
27) American Osteopathic Association
28) American Osteopathic Association of Addiction Medicine
29) American Pain Society
30) American Society of Addiction Medicine
31) American Society for Pain Management Nursing
32) American Society of Anesthesiologists
33) American Society of Pain Educators
34) Association of American Medical Colleges
35) Council of Medical Specialty Societies
36) Hospice and Palliative Nurses Association
37) National Association of Managed Care Physicians
38) National Association of State Controlled Substances Authorities
Authorities 39) National Commission on Certification of Physician
Authorities 39) National Commission on Certification of Physician Assistants
Authorities 39) National Commission on Certification of Physician Assistants 40) National Hospice and Palliative Care Organization
Authorities 39) National Commission on Certification of Physician Assistants 40) National Hospice and Palliative Care Organization
Authorities 39) National Commission on Certification of Physician Assistants 40) National Hospice and Palliative Care Organization

42) Society of Emergency Medicine Physician Assistants

h. NDA/ANDA holders will ensure that an interim single toll-free number call center is implemented no later than July 23, 2012, and a fully operational centralized call center is implemented no later than 90 calendar days after the approval of the REMS.

The following materials are part of the ER/LA Opioid Analgesic REMS and are appended:

- Patient Counseling Document (PCD) on Extended-Release/Long-Acting Opioid Analgesics
- FDA Blueprint for Prescriber Education for Extended-Release and Long-Acting Opioid Analgesics
- Prescriber Letter 1
- Prescriber Letter 2
- Prescriber Letter 3
- Professional Organization/Licensing Board Letter 1
- Professional Organization/Licensing Board Letter 2
- ER/LA Opioid Analgesic REMS website (www.ER-LA-opioidREMS.com)

### II. Implementation System

The ER/LA Opioid Analgesic REMS can be approved without the Elements to Assure Safe Use specifically described under FDCA 505-1(f)(3) (B), (C), and (D) of the Act; therefore an implementation system is not required.

#### III. Timetable for Submission of Assessments

REMS assessments will be submitted to the FDA at 6 months and 12 months after the initial approval date of the REMS (July 9, 2012), and annually thereafter. To facilitate inclusion of as much information as possible, while allowing reasonable time to prepare the submission, the reporting interval covered by each assessment will conclude no earlier than 60 days before the submission date for that assessment. The NDA holders will submit each assessment so that it will be received by the FDA on or before the due date based on the initial approval date of the REMS.

#### Patient Counseling Document (PCD)

### Patient Counseling Document on Extended-Release / Long-Acting Opioid Analgesics

#### Patient Name:

The <u>DOs</u> and <u>DON'Ts</u> of

## Extended-Release / Long - Acting Opioid Analgesics

<u>DO:</u>

- Read the Medication Guide
- Take your medicine exactly as prescribed
- Store your medicine away from children and in a safe place
- Flush unused medicine down the toilet
- Call your healthcare provider for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

#### Call 911 or your local emergency service right away if:

- You take too much medicine
- You have trouble breathing, or shortness of breath
- A child has taken this medicine by accident

#### Talk to your healthcare provider:

- If the dose you are taking does not control your painAbout any side effects you may be having
- About all the medicines you take, including over-thecounter medicines, vitamins, and dietary supplements

#### DON'T:

- Do not give your medicine to others
- Do not take medicine unless it was prescribed for you
- Do not stop taking your medicine without talking to your healthcare provider
- Do not cut, break, chew, crush, dissolve, snort, or inject your medicine. If you cannot swallow your medicine whole, talk to your healthcare provider.
- Do not drink alcohol while taking this medicine

For additional information on your medicine go to: dailymed.nlm.nih.gov

#### Patient Counseling Document on Extended-Release / Long-Acting Opioid Analgesics

Patient Name:

Patient Specific Information

# Take this card with you every time you see your healthcare provider and tell him/her:

- Your complete medical and family history, including any history of substance abuse or mental illness
- If you are pregnant or are planning to become pregnant
- The cause, severity, and nature of your pain
- Your treatment goals
- All the medicines you take, including over-thecounter (non-prescription) medicines, vitamins, and dietary supplements
- · Any side effects you may be having

Take your opioid pain medicine exactly as prescribed by your healthcare provider.

F	DA Blueprint for Prescriber Education for Extended-Release and Long-Acting Opioid Analgesics 08/2015
	Introduction for the FDA Blueprint for Prescriber Education for Extended-Release and Long-Acting Opioid Analgesics
(	n April 2011, FDA announced the elements of a Risk Evaluation and Mitigation Strategy (REMS) to ensure that the benefits of extended-release and long-acting (ER/LA) opioid analgesics outweigh the risks. The REMS supports national efforts to address the prescription drug abuse epidemic.
i	As part of the REMS, all ER/LA opioid analgesic companies must provide:
•	<ul> <li>Education for prescribers of these medications, which will be provided through accredited continuing education (CE) activities supported by independent educational grants from ER/LA opioid analgesic companies.</li> </ul>
	<ul> <li>Information that prescribers can use when counseling patients about the risks and benefits of ER/LA opioid analgesic use.</li> </ul>
	FDA developed core messages to be communicated to prescribers in the Blueprint for Prescriber Education (FDA Blueprint), published the draft FDA Blueprint for public comment, and considered the public comments when finalizing the FDA Blueprint. This final FDA Blueprin contains the core educational messages. It is approved as part of the ER/LA Opioid Analgesic REMS and will remain posted on the FDA website for use by CE providers to develop the actual CE activity. A list of all REMS-compliant CE activities that are supported by independent educational grants from the ER/LA opioid analgesic companies to accredited CE providers will be posted at <u>www.ER-LA-opioidREMS.com</u> as that information becomes available.
	The CE activities provided under the FDA Blueprint will focus on the safe prescribing of ER/LA opioid analgesics and consist of a core content of about three hours. The content is directed to orescribers of ER/LA opioid analgesics, but also may be relevant for other healthcare professionals (e.g., pharmacists). The course work is not intended to be exhaustive nor a substitute for a more comprehensive pain management course.
(	Accrediting bodies and CE providers will ensure that the CE activities developed under this REMS will be in compliance with the standards for CE of the Accreditation Council for Continuing Medical Education (ACCME) <sup>1.2</sup> or another CE accrediting body as appropriate to the prescribers' medical specialty or healthcare profession.
ł	For additional information from FDA, including more detailed Questions and Answers about the REMS for ER/LA Opioid Analgesics, see <u>http://www.fda.gov/Drugs/DrugSafety/InformationbyDrugClass/ucm163647.htm</u> .

#### FDA Blueprint for Prescriber Education for Extended-Release and Long-Acting Opioid Analgesics

#### Why Prescriber Education is Important

Health care professionals who prescribe extended-release (ER) and long-acting (LA) opioid analgesics (hereafter referred to as ER/LA opioid analgesics) are in a key position to balance the benefits of prescribing ER/LA opioid analgesics to treat pain against the risks of serious adverse outcomes including addiction, unintentional overdose, and death. Opioid misuse and abuse, resulting in injury and death, has emerged as a major public health problem.

- Based on the 2010 National Survey on Drug Use and Health, public health experts estimate more than 35 million Americans age 12 and older used an opioid analgesic for non-medical use some time in their life—an increase from about 30 million in 2002.<sup>3</sup>
- In 2009, there were nearly 343,000 emergency department visits involving nonmedical use of opioid analgesics.<sup>4</sup>
- In 2008, nearly 36,500 Americans died from drug poisonings, and of these, nearly 14,800 deaths involved opioid analgesics.<sup>5</sup>
- Improper use of any opioid can result in serious side effects including overdose and death, and this risk can be greater with ER/LA opioid analgesics.

Appropriate prescribing practices and patient education are important steps to help address this public health problem. Health care professionals who prescribe ER/LA opioid analgesics have a responsibility to help ensure the safe and effective use of these drug products. ER/LA opioid analgesics should be prescribed only by health care professionals who are knowledgeable in the use of potent opioids for the management of pain.

The expected results of the prescriber education in this REMS are that the prescribers will:

- a. Understand how to assess patients for treatment with ER/LA opioid analgesics.
- b. Be familiar with how to initiate therapy, modify dose, and discontinue use of ER/LA opioid analgesics.
- c. Be knowledgeable about how to manage ongoing therapy with ER/LA opioid analgesics.
- d. Know how to counsel patients and caregivers about the safe use of ER/LA opioid analgesics, including proper storage and disposal.
- e. Be familiar with general and product-specific drug information concerning ER/LA opioid analgesics.

#### I. Assessing Patients for Treatment with ER/LA Opioid Analgesic Therapy

- Prescribers should consider risks involved with ER/LA opioid analgesics and balance these against potential benefits. Risks include:
  - Overdose with ER/LA formulations, as most dosage units contain more opioid than immediate-release formulations.

<sup>3</sup>Substance Abuse and Mental Health Services Administration. 2011. Results from the 2010 National Survey on Drug Use and Health: Detailed Table, Table 7.1.a. Rockville, MD. http://www.samhsa.gov/data/NSDUH//abs/Sect7peTabs1to45.htm#Tab7.1A. Accessed on May 29, 2015.

<ul> <li>c. Prescribers should be knowledgeable about when and how to supplement pain management with immediate-release analgesics, opioids and non-opioids.</li> <li>d. Prescribers should be knowledgeable about converting patients from immediate-release to ER/LA opioid products and from one ER/LA opioid product to another ER/LA opioid product</li> <li>e. Prescribers should understand the concept of incomplete cross-tolerance when converting patients from one opioid to another.</li> <li>f. Prescribers should understand the concepts and limitations of equianalgesic dosing and</li> </ul>		
<ul> <li>iv. Misuse and addiction.</li> <li>v. Physical dependence and tolerance.</li> <li>vi. Interactions with other medications and substances (See <u>table in Section VI</u> for product-specific information).</li> <li>vii. Risk of neonatal opioid withdrawal syndrome with prolonged use during pregnancy.</li> <li>viii. Inadvertent exposure/ingestion by household contacts, especially children.</li> <li>b. Prescribers should assess each patient's risk of abuse, including substance use and psychiatric history. Prescribers should: <ol> <li>Obtain a complete history and conduct a complete physical examination. The history should include assessment for a family history of substance abuse and psychiatric disorders, as well as special considerations regarding dose and adverse effects in gratric patients, pregnat women, and children. <ol> <li>A history of substance abuse does not prohibit treatment with ER/LA opioid analgesics but may require additional monitoring and expert consultation.</li> <li>Be knowledgeable about risk factors for opioid abuse.</li> <li>Understand and appropriately use screening tools for addiction or abuse to help assess potential risks associated with chronic opioid therapy and to help manage patients using ER/LA opioid analgesics (e.g., structured interview tools).</li> <li>iv. Adequately document all patient interactions and treatment plans.</li> </ol> </li> <li>Prescribers should understand when to appropriately refer high risk patients to pain management specialists.</li> <li>Prescribers should have awareness of federal and state regulations on opioid prescribing.</li> <li>Prescribers should have awareness of federal and state regulations on opioid prescribing.</li> <li>Prescribers should have awareness of federal and state regulations on opioid non-tolerant patients. (See table in Section VI for product-specific information).</li> <li>ii. patients from one opioid to another. f. Prescribers should understand the concepts and limitations of equianalgesic dosing and	e	
	0.	
follow patients closely during all periods of dose adjustments	f.	
		follow patients closely during all periods of dose adjustments.
		3

- g. Prescribers should understand the warning signs and symptoms of significant respiratory depression from opioids and monitor patients closely, especially at the time of treatment initiation and dose increases.
- Prescribers should understand that tapering the opioid dose is necessary to safely discontinue treatment with ER/LA opioid analgesics when therapy is no longer needed.

#### III. Managing Therapy with ER/LA Opioid Analgesics

- Prescribers should establish analgesic and functional goals for therapy and periodically evaluate pain control, functional outcomes, side-effect frequency and intensity, and healthrelated quality of life.
- b. Prescribers should be aware of the existence of Patient Prescriber Agreements (PPAs).
   i. PPAs are documents signed by both prescriber and patient at the time an opioid is prescribed.
  - ii. PPAs can help ensure patients and caregivers understand the goals of treatment, the risks, and how to use the medications safely.
  - PPAs can include commitments to return for follow-up visits, to comply with appropriate monitoring (such as random drug testing), and to safeguard the medication.
- Prescribers should monitor patient adherence to the treatment plan, especially with regard to misuse and abuse by:
  - Recognizing, documenting, and addressing aberrant drug-related behavior.
     Utilizing state Prescription Drug Monitoring Programs, where practical, to identify behaviors that may represent abuse.
  - iii. Understanding the utility and interpretation of drug testing (e.g., screening and confirmatory tests), and using it as indicated.
  - iv. Screening and referring for substance abuse treatment as indicated.
  - v. Performing medication reconciliation as indicated.
- d. Prescribers should understand how to anticipate and manage adverse events associated with ER/LA opioid analgesics.
- e. Prescribers should be aware that there are no adequate and well-controlled studies of ER/LA opioid analgesics in pregnant women. ER/LA opioid analgesics should be used during pregnancy only if the potential benefit justifies the risk to the fetus.
- f. Prescribers should be aware of the pregnancy status of their patients. If opioid use is required for a prolonged period in a pregnant woman, prescribers should advise the patient of the risk of neonatal opioid withdrawal syndrome and ensure that appropriate treatment will be available.
- g. Prescribers treating patients with ER/LA opioid analgesics should periodically assess benefits and side effects of these drugs, and the continued need for opioid analgesics.
- h. Prescribers should understand the need for reevaluation of patient's underlying medical condition if the clinical presentation changes over time.
- i. Prescribers should be familiar with referral sources for the treatment of abuse or addiction that may arise from the use of ER/LA opioid analgesics.

#### IV. Counseling Patients and Caregivers about the Safe Use of ER/LA Opioid Analgesics

a. Prescribers should use the Patient Counseling Document as part of the discussion when prescribing opioid analgesics.

FD	A Blueprint for Prescriber Education for Extended-Release and Long-Acting Opioid Analgesics 08/2015
b.	Prescribers should explain product-specific information about the prescribed ER/LA opioid analgesic.
	Prescribers should explain how to take the ER/LA opioid analgesic as prescribed. Prescribers should explain the importance of adherence to dosing regimen, how to handle
e.	missed doses, and to contact their prescriber should pain not be controlled. Prescribers should inform patients and caregivers to read the specific ER/LA opioid
f.	analgesic Medication Guide they receive from the pharmacy. Prescribers should warn patients and caregivers that under no circumstances should an ora ER/LA opioid analgesic be broken, chewed or crushed, and patches should not be cut or torn prior to use, as this may lead to rapid release of the ER/LA opioid analgesic causing overdose and death. When a patient cannot swallow a capsule whole, prescribers should refer to the product labeling to determine if it is appropriate to sprinkle the contents of a
g.	capsule on applesauce or administer via a feeding tube. Prescribers should caution patients and caregivers that the use of other CNS depressants such as sedative-hypnotics and anxiolytics, alcohol, or illegal drugs with ER/LA opioid analgesics can cause overdose and death. Patients and caregivers should be instructed to only use other CNS depressants, including other opioids, under the instruction of their prescriber.
	Prescribers should instruct patients and caregivers to tell all of their doctors about all medications the patient is taking.
i.	Prescribers should warn patients and caregivers not to abruptly discontinue or reduce the ER/LA opioid analgesic and discuss how to safely taper the dose when discontinuing.
j.	Prescribers should caution patients and caregivers that ER/LA opioid analgesics can cause serious side effects that can lead to death, even when used as recommended. Prescribers should counsel patients and caregivers on the risk factors, signs, and symptoms of overdose and opioid-induced respiratory depression, gastrointestinal
k.	obstruction, and allergic reactions. Prescribers should counsel patients and caregivers on the most common side effects of ER/LA opioid analgesics, and about the risk of falls, working with heavy machinery, and driving.
	Patients or caregivers should call their prescriber for information about managing side effect Prescribers should explain to patients and caregivers that sharing ER/LA opioid analgesics with others may cause them to have serious side effects including death, and that selling or giving away ER/LA opioid analgesics is against the law.
	Prescribers should counsel patients and caregivers to store ER/LA opioid analgesics in a safe and secure place away from children, family members, household visitors, and pets.
pro	Prescribers should warn patients and caregivers that ER/LA opioid analgesics must be tected from theft.
	Prescribers should counsel patients and caregivers to dispose of any ER/LA opioid algesics when no longer needed by flushing them down the toilet.
	Prescribers should counsel patients and caregivers to inform them about side effects. Adverse events should be reported to the FDA at 1-800-FDA-1088 or via
	http://www.fda.gov/downloads/AboutFDA/ReportsManualsForms/Forms/UCM163919.pdf.
. Ger	neral Drug Information for ER/LA Opioid Analgesic Products
	escribers should be knowledgeable about general characteristics, toxicities, and drug eractions for ER/LA opioid analgesic products. For example,
a.	ER/LA opioid analgesic products are scheduled under the Controlled Substances Act and

FDA Blueprint for Prescriber Education for Extended-Release and Long-Acting Opioid Analgesics 08/2015 can be misused and abused.

- Respiratory depression is the most important serious adverse effect of opioids as it can be immediately life-threatening.
- c. Constipation is the most common long-term side effect and should be anticipated.
- d. Drug-drug interaction profiles vary among the products. Knowledge of particular opioid-drug interactions, and the underlying pharmacokinetic and pharmacodynamic mechanisms, allows for the safer administration of opioid analgesics.
  - Central nervous system depressants (alcohol, sedatives, hypnotics, tranquilizers, tricyclic antidepressants) can have a potentiating effect on the sedation and respiratory depression caused by opioids.
  - Some ER opioid formulations may rapidly release opioid (dose dump) when exposed to alcohol. Some drug levels may increase without dose dumping when exposed to alcohol. See individual product labeling.
  - Using opioids with monoamine oxidase inhibitors (MAOIs) may result in possible increase in respiratory depression. Using certain opioids with MAOIs may cause serotonin syndrome.
  - Opioids can reduce the efficacy of diuretics by inducing the release of antidiuretic hormone (ADH).
  - v. Some opioids (methadone, buprenorphine) can prolong the QTc interval.
  - vi. Concomitant drugs that act as inhibitors or inducers of various cytochrome P450 enzymes can result in higher or lower than expected blood levels of some opioids.
     vii. See table in Section VI for product-specific information.
- Tolerance to sedating and respiratory-depressant effects of opioids is critical to the safe use of ER/LA opioid analgesics.
  - i. For ER products, patients must meet the criteria for opioid tolerance, described in the <u>table in Section VI</u>, before using:
    - a. certain products,
    - b. certain strengths,
    - c. certain daily doses, and
    - d. in specific indicated patient populations (e.g., pediatric patients).
    - iii. See the table in Section VI for product-specific information.
- f. ER/LA opioid analgesic tablets must be swallowed whole. ER/LA opioid analgesic capsules should be swallowed intact or when necessary, the pellets from some capsules can be sprinkled on applesauce and swallowed without chewing.
- g. For transdermal products, external heat, fever, and exertion can increase absorption of the opioid, leading to fatal overdose. Transdermal products with metal foil backings are not safe for use in MRIs.
- Follow the instructions for conversion in the Dosage and Administration section (2.1) in the *Prescribing Information* of each product when converting patients from one opioid to another.

#### VI. Specific Drug Information for ER/LA Opioid Analgesic Products

Prescribers should be knowledgeable about specific characteristics of the ER/LA opioid analgesic products they prescribe, including the drug substance, formulation, strength, dosing interval, key instructions, specific information about conversion between products where available, specific drug interactions, use in opioid-tolerant patients, product-specific safety concerns, and relative potency to morphine. The attached table is a reference. For detailed information, prescribers can refer to prescribing information available online via DailyMed at www.dailymed.nlm.nih.gov or Drugs@FDA at www.fda.gov/drugsatfda.

Avinza (morphine sulfa	(ER/LA opioi	ded-Release and Long-Acting Opioid Analgesics d analgesics) Butrans (buprenorphine transdermal system)

Drug information Comm	non to the Class of Extended-Release and Long-Acting Opioid Analgesics (ER/LA opioid analgesics)
Drug Interactions Common to the Class	<ul> <li>Concurrent use with other central nervous system depressants (sedatives, hypnotics, general anesthetics, antiemetics, phenothiazines, other tranquilizers, and alcohol) can increase the risk of respiratory depression, hypotension, profound sedation, or coma. Reduce the initial dose of one or both agents.</li> <li>Avoid concurrent use of mixed opioid agonist/antagonists (i.e., pentazocine, nalbuphine, and butorphanol) or partial opioid agonists (buprenorphine) in patients who have received or are receiving a course of therapy with a full opioid agonist. In these patients, mixed opioid agonist/antagonists and partial opioid agonists may reduce the analgesic effect and/or may precipitate withdrawal symptoms.</li> <li>Opioids may enhance the neuromuscular blocking action of skeletal muscle relaxants and produce an increased degree of respiratory depression.</li> <li>Concurrent use with anticholinergic medication increases the risk of urinary retention and severe constipation, which may lead to paralytic ileus.</li> </ul>
Use in Opioid-Tolerant Patients	<ul> <li>Adult patients considered opioid-tolerant are those receiving, for one weel longer:         <ul> <li>at least 60 mg oral morphine/day</li> <li>25 mcg transdermal fentanyl/hour</li> </ul> </li> </ul>
	o 30 mg oral oxycodone/day
	<ul> <li>8 mg oral hydromorphone/day</li> <li>25 mg oral oxymorphone/day</li> </ul>
	<ul> <li>Pediatric patients (11 years and older) considered opioid-tolerant are those who are already receiving and tolerating a minimum daily opioid dose of at least 20 mg oxycodone orally or its equivalent (applicable to OxyContin's pediatric indication only)</li> </ul>
	<ul> <li>See individual product information for which products:</li> <li>Have strengths or total daily doses only for use in opioid-tolerant patients.</li> <li>Are only for use in opioid-tolerant patients at all strengths.</li> </ul>
Contraindications	<ul> <li>Significant respiratory depression</li> <li>Acute or severe asthma in an unmonitored setting or in the absence of resuscitative equipment</li> <li>Known or suspected paralytic ileus</li> <li>Hypersensitivity (e.g., anaphylaxis)</li> <li>See individual product information for additional contraindications.</li> </ul>
Relative Potency To Oral Morphine	<ul> <li>These are intended as general guides.</li> <li>Follow conversion instructions in individual product information.</li> <li>Incomplete cross-tolerance and inter-patient variability require the use of conservative dosing when converting from one opioid to another - halve the calculated comparable dose and titrate the new opioid as needed.</li> </ul>

Specific Drug Information for Extended-Release and Long-Acting Opioid Analgesics (ER/LA opioid analgesics)		
Avinza	Morphine Sulfate ER Capsules, 30 mg, 45 mg, 60 mg, 75 mg, 90 mg, and 120 mg	
Dosing Interval	Once a day	
Key Instructions	<ul> <li>Initial dose in opioid non-tolerant patients is 30 mg.</li> <li>Titrate in increments of not greater than 30 mg using a minimum of 3 to day intervals.</li> <li>Swallow capsule whole (do not chew, crush, or dissolve).</li> <li>May open capsule and sprinkle pellets on applesauce for patients who can reliably swallow without chewing; use immediately.</li> <li>Maximum daily dose: 1600 mg due to risk of serious renal toxicity by excipient, fumaric acid.</li> </ul>	
Specific Drug Interactions	<ul> <li>Alcoholic beverages or medications containing alcohol may result in the rapid release and absorption of a potentially fatal dose of morphine.</li> <li>P-gp inhibitors (e.g. quinidine) may increase the absorption/exposure of morphine sulfate by about two-fold.</li> </ul>	
Use in Opioid-Tolerant Patients	90 mg and 120 mg capsules are for use in opioid-tolerant patients only.	
Product-Specific Safety Concerns	None	
Butrans	Buprenorphine Transdermal System, 5 mcg/hr, 7.5 mcg/hr, 10 mcg/hr, 15 mcg/hr, 20 mcg/hr	
Dosing Interval	One transdermal system every 7 days	
Key Instructions	<ul> <li>Initial dose in opioid non-tolerant patients when converting from less that 30 mg morphine equivalents, and in mild to moderate hepatic impairmer - 5 mg/hr dose.</li> <li>When converting from 30 mg to 80 mg morphine equivalents - first taper 30 mg morphine equivalent, then initiate with 10 mcg/hr dose.</li> <li>Titrate in 5 mcg/hour or 10 mcg/hour increments by using no more than patches of the 5 mcg/hour or 10-mcg/hour system(s) with a minimum of hours between dose adjustments. The total dose from all patches should exceed 20 mcg/hour</li> <li>Maximum dose: 20 mcg/h due to risk of QTc prolongation.</li> <li>Application         <ul> <li>Apply to intact/non-irritated skin.</li> <li>Skin may be prepped by clipping hair, washing site with water only</li> <li>Rotate site of application a minimum of 3 weeks before reapplying to the same site.</li> <li>Do not cut.</li> </ul> </li> <li>Avoid exposure to heat.</li> <li>Object to the to risk of Uter and the site to getter and flushing down the toilet.</li> </ul>	
Specific Drug Interactions	<ul> <li>CYP3A4 Inhibitors may increase buprenorphine levels.</li> <li>CYP3A4 Inducers may decrease buprenorphine levels.</li> <li>Benzodiazepines may increase respiratory depression.</li> <li>Class IA and III antiarrhythmics, other potentially arrhythmogenic agents may increase risk for QTc prolongation and torsade de pointe.</li> </ul>	
Use in Opioid-Tolerant Patients	Butrans 7.5 mcg/hr, 10 mcg/hr, 15 mcg/hr, and 20 mcg/hr transdermal system are for use in opioid- tolerant patients only.	
Drug-Specific Safety Concerns	<ul> <li>QTc prolongation and torsade de pointe.</li> <li>Hepatotoxicity</li> <li>Application site skin reactions</li> </ul>	
Relative Potency To Oral Morphine	Equipotency to oral morphine has not been established.	

Specific Drug Information for Extended-Release and Long-Acting Opioid Analgesics (ER/LA opioid analgesics)		
Dolophine	Methadone Hydrochloride	
<b>D</b>	Tablets, 5 mg and 10 mg	
Dosing Interval	Every 8 to 12 hours	
Key Instructions	<ul> <li>Initial dose in opioid non-tolerant patients: 2.5 to 10 mg</li> <li>Conversion of opioid-tolerant patients using equianalgesic tables can result in overdose and death. Use low doses according to the table in the full prescribing information.</li> <li>Titrate slowly, with dose increases no more frequent than every 3 to 5 day Because of high variability in methadone metabolism, some patients may require substantially longer periods between dose increases (up to 12 days).</li> <li>High inter-patient variability in absorption, metabolism, and relative analgesic potency.</li> <li>Opioid detoxification or maintenance treatment shall only be provided in a federally certified opioid (addiction) treatment program (Code of Federal Regulations, Title 42, Sec 8).</li> </ul>	
Specific Drug Interactions	<ul> <li>Pharmacokinetic drug-drug interactions with methadone are complex.</li> <li>CYP 450 inducers may decrease methadone levels.</li> <li>CYP 450 inhibitors may increase methadone levels.</li> <li>Anti-retroviral agents have mixed effects on methadone levels.</li> <li>Potentially arrhythmogenic agents may increase risk for QTc prolongation and torsade de pointe.</li> <li>Benzodiazepines may increase respiratory depression</li> </ul>	
Use in Opioid-Tolerant Patients	Refer to full prescribing information.	
Product-Specific Safety Concerns	<ul> <li>QTc prolongation and torsade de pointe.</li> <li>Peak respiratory depression occurs later and persists longer than analgesic effect.</li> <li>Clearance may increase during pregnancy.</li> <li>False positive urine drug screens possible.</li> </ul>	
Relative Potency To Oral Morphine	Varies depending on patient's prior opioid experience.	
Duragesic	Fentanyl Transdermal System, 12, 25, 37.5*, 50, 62.5*, 75, 87.5*, and 100 mcg/hr (*These strengths are available only in generic form)	
Dosing Interval	Every 72 hours (3 days)	
Key Instructions	<ul> <li>Use product specific information for dose conversion from prior opioid</li> <li>Use 50% of the dose in mild or moderate hepatic or renal impairment, avoid use in severe hepatic or renal impairment</li> <li>Application         <ul> <li>Apply to intact/non-irritated/non-irradiated skin on a flat surface.</li> <li>Skin may be prepped by clipping hair, washing site with water only</li> <li>Rotate site of application.</li> <li>Titrate using a minimum of 72 hour intervals between dose adjustmen</li> <li>Do not cut.</li> </ul> </li> <li>Avoid accidental contact when holding or caring for children.</li> <li>Dispose of used/unused patches by folding the adhesive side together and flushing down the toilet.</li> <li>Specific contraindications:</li> <li>Patients who are not opioid-tolerant.</li> <li>Management of post-operative pain, including use after out-patient or day surgery.</li> <li>Management of mild pain.</li> </ul>	

Specific Drug Inf	ormation for Extended-Release and Long-Acting Opioid Analgesics (ER/LA opioid analgesics)
Canadia Dava late anotican	
Specific Drug Interactions	<ul> <li>CYP3A4 inhibitors may increase fentanyl exposure.</li> </ul>
	<ul> <li>CYP3A4 inducers may decrease fentanyl exposure.</li> </ul>
	<ul> <li>Discontinuation of a concomitantly used cytochrome P450 3A4 inducer ma</li> </ul>
	result in an increase in fentanyl plasma concentration.
Use in Opioid-Tolerant	All doses of Duragesic are indicated for use in opioid-tolerant patients only.
Patients	
Product-Specific Safety	<ul> <li>Accidental exposure due to secondary exposure to unwashed/unclothed</li> </ul>
Concerns	application site.
	<ul> <li>Increased drug exposure with increased core body temperature or fever.</li> </ul>
	<ul> <li>Bradycardia</li> </ul>
	<ul> <li>Application site skin reactions</li> </ul>
Relative Potency To Oral	See individual product information for conversion recommendations from
Morphine	prior opioid
Embeda	Morphine Sulfate ER-Naltrexone
	Capsules, 20 mg/0.8 mg, 30 mg/1.2 mg, 50 mg/2 mg, 60 mg/2.4 mg,
	80 mg/3.2 mg, 100 mg/4 mg
Dosing Interval	Once a day or every 12 hours
Key Instructions	<ul> <li>Initial dose as first opioid: 20 mg/0.8 mg.</li> </ul>
	<ul> <li>Titrate using a minimum of 1 to 2 day intervals.</li> </ul>
	<ul> <li>Swallow capsules whole (do not chew, crush, or dissolve)</li> </ul>
	<ul> <li>Crushing or chewing will release morphine, possibly resulting in fatal</li> </ul>
	overdose, and naltrexone, possibly resulting in withdrawal symptoms.
	<ul> <li>May open capsule and sprinkle pellets on applesauce for patients who</li> </ul>
	can reliably swallow without chewing, use immediately.
Specific Drug Interactions	<ul> <li>Alcoholic beverages or medications containing alcohol may result in the</li> </ul>
Specific Drug meractions	rapid release and absorption of a potentially fatal dose of morphine.
	<ul> <li>P-gp inhibitors (e.g. quinidine) may increase the absorption/exposure of morphine sulfate by about two-fold.</li> </ul>
Use in Opioid-Tolerant	Embeda 100 mg/4 mg capsule is for use in opioid-tolerant patients only.
Patients	
Product-Specific Safety	None
Concerns

Specific Drug Information for Extended-Release and Long-Acting Opioid Analgesics (ER/LA opioid analgesics)		
Hysingla ER	Hydrocodone bitartrate Extended-Release Tablets, 20 mg, 30 mg, 40 mg, 60 mg, 80 mg, 100 mg, and 120 mg	
Dosing Interval	Every 24 hours (once-daily)	
Key Instructions	<ul> <li>Opioid-naïve patients: initiate treatment with 20 mg orally once daily. During titration, adjust the dose in increments of 10 mg to 20 mg every 3 to 5 days until adequate analgesia is achieved.</li> <li>Swallow tablets whole (do not chew, crush, or dissolve).</li> <li>Consider use of an alternative analgesic in patients who have difficulty swallowing or have underlying gastrointestinal disorders that may predispose them to obstruction.</li> <li>Take one tablet at a time, with enough water to ensure complete swallowing immediately after placing in the mouth.</li> <li>Use 1/2 of the initial dose and monitor closely for adverse events, such as respiratory depression and sedation, when administering Hysingla ER to patients with severe hepatic impairment or patients with moderate to seve renal impairment.</li> </ul>	
Specific Drug Interactions	<ul> <li>CYP3A4 inhibitors may increase hydrocodone exposure.</li> <li>CYP3A4 inducers may decrease hydrocodone exposure</li> <li>Concomitant use of Hysingla ER with strong laxatives (e.g., Lactulose) that rapidly increase GI motility may decrease hydrocodone absorption and result in decreased hydrocodone plasma levels.</li> <li>The use of MAO inhibitors or tricyclic antidepressants with Hysingla ER main increase the effect of either the antidepressant or Hysingla ER.</li> </ul>	
Use in Opioid-Tolerant Patients	A single dose of Hysingla ER greater than or equal to 80 mg is only for use in opioid tolerant patients.	
Product-Specific Safety Concerns	<ul> <li>Use with caution in patients with difficulty swallowing the tablet or underlyi gastrointestinal disorders that may predispose patients to obstruction.</li> <li>Esophageal obstruction, dysphagia, and choking have been reported with Hysingla ER.</li> <li>In nursing mothers, discontinue nursing or discontinue drug.</li> <li>QTc prolongation has been observed with Hysingla ER following daily dos of 160 mg. Avoid use in patients with congenital long QTc syndrome. This observation should be considered in making clinical decisions regarding patient monitoring when prescribing Hysingla ER in patients with congestit heart failure, bradyarrhythmias, electrolyte abnormalities, or who are takin medications that are known to prolong the QTc interval. In patients who develop QTc prolongation, consider reducing the dose.</li> </ul>	
Relative Potency To Oral Morphine	See individual product information for conversion recommendations from prior opioid	

Specific Drug Information for Extended-Release and Long-Acting Opioid Analgesics (ER/LA opioid analgesics)		
Kadian	Morphine Sulfate Extended-Release Capsules, 10 mg, 20mg, 30 mg, 40 mg, 50 mg, 60 mg, 70 mg, 80 mg, 100 mg, 130 mg, 150 mg, and 200 mg	
Dosing Interval	Once a day or every 12 hours	
Key Instructions	<ul> <li>Product information recommends not using as first opioid.</li> <li>Titrate using a minimum of 2-day intervals.</li> <li>Swallow capsules whole (do not chew, crush, or dissolve).</li> <li>May open capsule and sprinkle pellets on applesauce for patients who ca reliably swallow without chewing, use immediately.</li> </ul>	
Specific Drug Interactions	<ul> <li>Alcoholic beverages or medications containing alcohol may result in the rapid release and absorption of a potentially fatal dose of morphine.</li> <li>P-gp inhibitors (e.g. quinidine) may increase the absorption/exposure of morphine sulfate by about two-fold.</li> </ul>	
Use in Opioid-Tolerant Patients	Kadian 100 mg, 130 mg, 150 mg, and 200 mg capsules are for use in opioid- tolerant-patients only	
Product-Specific Safety Concerns	None	
MS Contin	Morphine Sulfate Extended-release Tablets, 15 mg, 30 mg, 60 mg, 100 mg, and 200 mg	
Dosing Interval	Every 8 hours or every 12 hours	
Key Instructions	<ul> <li>Product information recommends not using as first opioid.</li> <li>Titrate using a minimum of 1 to 2-day intervals.</li> <li>Swallow tablets whole (do not chew, crush, or dissolve).</li> </ul>	
Specific Drug Interactions	P-gp inhibitors (e.g. quinidine) may increase the absorption/exposure of morphine sulfate by about two-fold.	
Use in Opioid-Tolerant Patients	MS Contin 100 mg and 200 mg tablet strengths are for use in opioid-tolerant patients only.	
Product-Specific Safety Concerns	None	
Nucynta ER	Tapentadol Extended-Release Tablets, 50 mg, 100mg, 150 mg, 200 mg, and 250 mg	
Dosing Interval	Every 12 hours	
Key Instructions	<ul> <li>Use 50 mg every 12 hours as initial dose in opioid nontolerant patients</li> <li>Titrate by 50 mg increments using a minimum of 3-day intervals.</li> <li>Maximum total daily dose is 500 mg</li> <li>Swallow tablets whole (do not chew, crush, or dissolve).</li> <li>Take one tablet at a time and with enough water to ensure complete swallowing immediately after placing in the mouth.</li> <li>Dose once daily in moderate hepatic impairment with 100 mg per day maximum</li> <li>Avoid use in severe hepatic and renal impairment.</li> </ul>	
Specific Drug Interactions	<ul> <li>Alcoholic beverages or medications containing alcohol may result in the rapid release and absorption of a potentially fatal dose of tapentadol.</li> <li>Contraindicated in patients taking MAOIs.</li> </ul>	
Use in Opioid-Tolerant Patients	No product-specific considerations.	
Product-Specific Safety Concerns	Risk of serotonin syndrome     Angioedema	
Relative Potency To Oral Morphine	Equipotency to oral morphine has not been established.	

Specific Drug Information for Extended-Release and Long-Acting Opioid Analgesics (ER/LA opioid analgesics)		
Opana ER	Oxymorphone Hydrochloride ER Tablets, 5 mg, 7.5 mg, 10 mg, 15 mg, 20 mg, 30 mg, and 40 mg	
Dosing Interval	Every 12h dosing, some may benefit from asymmetric (different dose given in AM than in PM) dosing.	
Key Instructions	<ul> <li>Use 5 mg every 12 hours as initial dose in opioid non-tolerant patients and patients with mild hepatic impairment and renal impairment (creatinine clearance &lt; 50 mL/min) and patients over 65 years of age</li> <li>Swallow tablets whole (do not chew, crush, or dissolve).</li> <li>Take one tablet at a time, with enough water to ensure complete swallowing immediately after placing in the mouth.</li> <li>Titrate in increments of 5 to 10 mg using a minimum of 3 to 7-day intervals.</li> <li>Contraindicated in moderate and severe hepatic impairment.</li> </ul>	
Specific Drug Interactions	<ul> <li>Alcoholic beverages or medications containing alcohol may result in the absorption of a potentially fatal dose of oxymorphone.</li> </ul>	
Use in Opioid-Tolerant Patients	No product specific considerations.	
Product-Specific Safety Concerns	<ul> <li>Use with caution in patients who have difficulty in swallowing or have underlying GI disorders that may predispose them to obstruction, such as a small gastrointestinal lumen.</li> </ul>	
Relative Potency To Oral Morphine	Approximately 3:1 oral morphine to oxymorphone oral dose ratio	
OxyContin	Oxycodone Hydrochloride Extended-release Tablets, 10 mg, 15 mg, 20 mg, 30 mg, 40 mg, 60 mg, and 80 mg	
Dosing Interval	Every 12 hours	
Key Instructions	<ul> <li>For Adults:         <ul> <li>Initial dose in opioid-naïve and opioid non-tolerant patients is 10 mg every 12 hours.</li> <li>If needed, adult dosage may be adjusted in 1 to 2 day intervals.</li> <li>When a dose increase is clinically indicated, the total daily oxycodone dose usually can be increased by 25% to 50% of the current dose.</li> </ul> </li> <li>For Pediatric patients (11 years and older): Use only in <u>opioid-tolerant</u> patients (see below, <i>Use in Opioid-Tolerant Patients</i> for dosing information).</li> <li>For all patients:         <ul> <li>Hepatic impairment: start with one third to one half the usual dosage</li> <li>Renal impairment (creatinine clearance &lt;60 mL/min): start with one half the usual dosage.</li> <li>Consider use of other analgesics in patients who have difficulty swallowing or have underlying GI disorders that may predispose them i obstruction. Swallow tablets whole (do not chew, crush, or dissolve).</li> </ul> </li> <li>Take one tablet at a time, with enough water to ensure complete swallowing immediately after placing in the mouth.</li> </ul>	
Specific Drug Interactions	CYP3A4 inhibitors may increase oxycodone exposure.     CYP3A4 inducers may decrease oxycodone exposure.	

Specific Drug Into	ormation for Extended-Release and Long-Acting Opioid Analgesics (ER/LA opioid analgesics)
Use in Opioid-Tolerant Patients	<ul> <li>For Adults:</li> <li>Single dose greater than 40 mg or total daily dose greater than 80 mg a for use in adult patients in whom tolerance to an opioid of comparable potency has been established.</li> <li>For Pediatric patients (11 years and older):</li> <li>For use only in <u>opioid-tolerant</u> pediatric patients already receiving and tolerating opioids for at least 5 consecutive days with a minimum of 20 mg per day of oxycodone or its equivalent for at least two days immediately preceding dosing with OxyContin.</li> <li>If needed, pediatric dosage may be adjusted in 1 to 2 day intervals.</li> <li>When a dose increase is clinically indicated, the total daily oxycodone dose usually can be increased by 25% of the current total daily dose.</li> </ul>
Product-Specific Safety Concerns	<ul> <li>Choking, gagging, regurgitation, tablets stuck in the throat, difficulty swallowing the tablet.</li> <li>Contraindicated in patients with gastrointestinal obstruction.</li> </ul>
Relative Potency To Oral Morphine	Approximately 2:1 oral morphine to oxycodone oral dose ratio.
Targiniq ER	Oxycodone Hydrochloride / Naloxone Hydrochloride Extended-release tablets, 10 mg/5 mg, 20 mg/10 mg, and 40 mg/20 mg
Dosing Interval	<ul> <li>Every 12 hours</li> </ul>
Key Instructions	<ul> <li>Opioid-naïve patients: initiate treatment with 10 mg/5 mg every 12 hours.</li> <li>Titrate using a minimum of 1 to 2 day intervals.</li> <li>Do not exceed 80 mg/40 mg total daily dose (40 mg/20 mg q12) of Targin ER</li> <li>May be taken with or without food.</li> <li>Swallow tablets whole. Do not chew, crush, split, or dissolve, as this will release oxycodone, possibly resulting in fatal overdose, and naloxone, possibly resulting in withdrawal symptoms.</li> <li>Hepatic impairment: contraindicated in moderate and severe hepatic impairment. In patients with mild hepatic impairment, start with one third t one half the usual dosage.</li> <li>Renal impairment (creatinine clearance &lt; 60 mL/min): start with one half t usual dosage.</li> </ul>
Specific Drug Interactions	<ul> <li>CYP3A4 inhibitors may increase oxycodone exposure.</li> <li>CYP3A4 inducers may decrease oxycodone exposure</li> </ul>
Use in Opioid-Tolerant Patients	<ul> <li>Single dose greater than 40 mg/20 mg or total daily dose of 80 mg/40 mg are for use in opioid-tolerant patients only</li> </ul>
Product-Specific Safety Concerns	Contraindicated in patients with moderate to severe hepatic impairment.
Relative Potency To Oral	<ul> <li>See individual product information for conversion recommendations from prior opioid.</li> </ul>

	(ER/LA opioid analgesics)
Zohydro ER	Hydrocodone Bitartrate Extended-Release Capsules, 10 mg, 15 mg, 20 mg, 30 mg, 40 mg, and 50 mg
Dosing Interval	Every 12 hours
Key Instructions	<ul> <li>Initial dose in opioid non-tolerant patient is 10 mg.</li> <li>Titrate in increments of 10 mg using a minimum of 3 to 7day intervals.</li> <li>Swallow capsules whole (do not chew, crush, or dissolve).</li> </ul>
Specific Drug Interactions	<ul> <li>Alcoholic beverages or medications containing alcohol may result in the rapid release and absorption of a potentially fatal dose of hydrocodone.</li> <li>CYP3A4 inhibitors may increase hydrocodone exposure.</li> <li>CYP3A4 inducers may decrease hydrocodone exposure.</li> </ul>
Use in Opioid-Tolerant Patients	<ul> <li>Single dose greater than 40 mg or total daily dose greater than 80 mg are for use in opioid-tolerant patients only.</li> </ul>
Product-Specific Safety Concerns	None
Relative Potency To Oral Morphine	Approximately 1.5:1 oral morphine to hydrocodone oral dose ratio.

Presci	iber l	Letter #1 This letter ceased distribution on July 31, 2012
		FDA-Required REMS Program for Serious Drug Risks
Subj	ect:	Announcement of a Risk Evaluation and Mitigation Strategy (REMS) for all extended-release/long- acting opioid analgesic drug products due to their risks of misuse, abuse, addiction, and overdose.
Dear <b>D</b>	EA-Re	egistered Prescriber:
pain in analge	the U sics ar	lease and long-acting (ER/LA) opioid analgesics are approved for the management of chronic moderate-to-sever .S., and can be safe and effective in appropriately selected patients when used as directed. However, opioid e also associated with serious risks and are at the center of a major public health crisis of increased misuse, abus erdose, and death.
necess (addic strateg minim	ary for tion, u y to m ize the	d and Drug Administration (FDA) has determined that a Risk Evaluation and Mitigation Strategy (REMS) is r ER/LA opioid analgesics to ensure that the benefits continue to outweigh the risks of adverse outcomes nintentional overdose, and death) resulting from inappropriate prescribing, abuse, and misuse. A REMS is a nanage a known or potential serious risk associated with a drug product. In the interest of public health and to burden on the healthcare delivery system from having multiple unique REMS programs, pharmaceutical ubject to this REMS have joined together to implement this REMS for all ER/LA opioid analgesic drug products.
The pr	incipa	l components of this REMS are:
	the l	criber training on all ER/LA opioid analgesics, Patient Counseling Document on Extended-Release and Long-Acting Opioid Analgesics (PCD), and ique Medication Guide for each ER/LA opioid analgesic drug product.
The br	anded	and generic drug products subject to this REMS include <i>all</i> :
:	fent	nded-release, oral-dosage forms containing <ul> <li>hydromorphone,</li> <li>morphine,</li> <li>oxycodone,</li> <li>oxycodone,</li> <li>oxymorphone, or</li> <li>tapentadol;</li> </ul> anyl and buprenorphine-containing transdermal delivery systems; and hadone tablets and solutions that are indicated for use as analgesics.
Presci	iber A	Action
Under	the RE	EMS, you are <b>strongly encouraged</b> to do <b>all</b> of the following:
•	edua nom <i>com</i> Pres cour	in <b>(Educate Yourself)</b> - Complete REMS-compliant training offered by an accredited provider of continuing cation (CE) for your discipline. This training is being developed and will be offered early next year at no or inal cost to prescribers. You will be notified when REMS-compliant training will become available. <i>REMS-pliant training</i> will: (a) be delivered by accredited CE providers; (b) cover all elements of the FDA Blueprint for criber Education for Extended-Release and Long-Acting Opioid Analgesics ("FDA Blueprint"); (c) include a post-rse knowledge assessment; and (d) be subject to independent audit of content and compliance with applicable editing standards.
•	pati	nsel Your Patients - Discuss the safe use, serious risks, storage, and disposal of ER/LA opioid analgesics with ents and their caregivers every time you prescribe these medicines. The enclosed <i>Patient Counseling Document o</i> <i>nded-Release/Long-Acting Opioid Analgesics</i> (PCD) should be used to facilitate these discussions.
•	the i	phasize Patient and Caregiver Understanding of the Medication Guide - Stress to patients and their caregiver importance of reading the Medication Guide that they will receive from their pharmacist every time an ER/LA id analgesic is dispensed to them, as the information in the Medication Guide may have changed.
DDRP Le	tter 1	Page 1 of 2

#### Prescriber Letter #1

 Consider Using Other Tools - In addition to the PCD, there are other publicly-available tools to improve patient, household, and community safety when using ER/LA opioid analgesics, as well as compliance with conditions of treatment, including Patient-Prescriber Agreements (PPAs) and risk assessment instruments.

#### **<u>REMS-compliant Training Programs</u>**

A critical component of the ER/LA Opioid Analgesics REMS program is essential safety education for prescribers. REMScompliant training for prescribers, as described previously, will be delivered by accredited CE providers and will include both general and product-specific drug information, as well as information on weighing the benefits and risks of opioid therapy, appropriate patient selection, managing and monitoring patients, and counseling patients on the safe use of these drugs. In addition, the education will include information on how to recognize evidence of, and the potential for, opioid misuse, abuse, addiction, and overdose.

It will be some time before the REMS-compliant training funded by educational grants from the pharmaceutical companies subject to this REMS becomes available. The FDA developed core messages to be communicated to prescribers in the FDA <u>Blueprint for Prescriber Education for Extended-Release and Long-Acting Opioid Analgesics ("FDA Blueprint"</u>), which will be used by accredited CE providers to develop REMS-compliant training courses. A follow-up letter notifying you of the availability of REMS-compliant training funded under this REMS will be sent not later than thirty (30) days before such training is offered. However, REMS-compliant ducation may also be offered by accessfully complete REMS-compliant training offered to improve your ability to prescribe these medications more safely.

#### The Patient Counseling Document on Extended-Release/Long-Acting Opioid Analgesics (PCD)

Enclosed with this letter is the Patient Counseling Document that was developed under the REMS for ER/LA opioid analgesics to assist you in having important conversations with patients for whom you select an ER/LA opioid analgesic. It contains important safety information common to the drug products subject to this REMS, and includes space for you to write additional information to help your patients use their specific ER/LA opioid analgesic safely. The PCD should be provided to the patient or their caregiver at the time of prescribing. <u>Patients and their caregivers should be conseled on</u>:

- the importance of taking these medicines exactly as you prescribe them,
- the need to store ER/LA opioid analgesics safely and securely out of the reach of children, pets, and household members to avoid risks from unintended exposure,
- the importance of not sharing these medications, even if someone has the same symptoms as the patient, and
- the proper methods of disposal of unneeded ER/LA opioid analgesics.

You can re-order or print additional copies of the PCD from www.ER-LA-opioidREMS.com.

#### Adverse Event Reporting

To report all suspected adverse reactions associated with the use of the ER/LA opioid analgesics, contact:

- the pharmaceutical company that markets the specific product, or
- the FDA MedWatch program:
  - by phone at 1-800-FDA-1088 (1-800-332-1088) or
  - online at <u>www.fda.gov/medwatch/report.htm</u>

More information about this REMS can be obtained at: <u>www.ER-LA-opioidREMS.com</u> or by calling the ER/LA Opioid Analgesic REMS Call Center at 1-800-503-0784.

#### Sincerely,

The ER/LA Opioid Analgesic REMS Companies

DDRP Letter 1

This letter ceased distribution on January 28, 2013

#### FDA-Required REMS Program for Serious Drug Risks

Subject: Availability of Risk Evaluation and Mitigation Strategy (REMS)-compliant training under the REMS for all extended-release/long-acting opioid analgesic drug products.

#### Dear DEA-Registered Prescriber:

Extended-release and long-acting (ER/LA) opioid analgesics<sup>1</sup> are approved for the management of chronic moderate-to-severe pain in the U.S., and can be safe and effective in appropriately selected patients when used as directed. However, opioid analgesics are also associated with serious risks and are at the center of a major public health crisis of increased misuse, abuse, addiction, overdose, and death. The U.S. Food and Drug Administration (FDA) determined that a Risk Evaluation and Mitigation Strategy (REMS) was necessary to ensure that the benefits of ER/LA opioid analgesics continue to outweigh the risks of adverse outcomes (addiction, unintentional overdose, and death) resulting from inappropriate prescribing, abuse, and misuse.

Several months ago, you received a letter announcing the REMS for all ER/LA opioid analgesic drug products, which explained that the principal components of this REMS are:

- a) Prescriber training on all ER/LA opioid analgesics,
- b) the Patient Counseling Document on Extended-Release/Long-Acting Opioid Analgesics (PCD), and
- c) a unique Medication Guide for each ER/LA opioid analgesic drug product.

#### **<u>REMS-compliant Training Programs</u>**

The purpose of this letter is to provide notification of the upcoming availability of REMS-compliant training on ER/LA opioid analgesics – provided at a nominal to no cost to prescribers. REMS-compliant training is a critical component of the ER/LA Opioid Analgesics REMS program and constitutes essential safety education for prescribers. *REMS-compliant training* will: (a) be delivered by accredited CE providers; (b) cover all elements of the FDA Blueprint for Prescriber Education for Extended-Release and Long-Acting Opioid Analgesics ("FDA Blueprint"); (c) include a post-course knowledge assessment; and (d) be subject to independent audit of content and compliance with applicable accrediting standards.

REMS-compliant training will focus on the safe prescribing of ER/LA opioid analgesics. The FDA developed core messages to be communicated to prescribers in the FDA Blueprint, which will be used by accredited CE providers to design and deliver REMS-compliant training courses. The FDA Blueprint is available at <a href="http://www.fda.gov/downloads/Drugs/DrugSafety/Informationby/DrugClass/UCM277916.pdf">http://www.fda.gov/downloads/Drugs/DrugSafety/Informationby/DrugClass/UCM277916.pdf</a>

The core messages include:

- Understand how to assess patients and determine which may be appropriate for treatment with ER/LA opioid analgesics.
- Be familiar with how to initiate therapy, modify dose, and discontinue use of ER/LA opioid analgesics.
- Be knowledgeable about how to manage and monitor ongoing therapy with ER/LA opioid analgesics.
- Know how to counsel patients and caregivers about the safe use of ER/LA opioid analgesics, including proper storage
  and disposal.
- Be familiar with general and product-specific drug information concerning ER/LA opioid analgesics.

REMS-compliant training for prescribers also includes information on weighing the benefits and risks of opioid therapy and how to recognize evidence of, and the potential for, opioid misuse, abuse, addiction, and overdose. REMS-compliant training may also be offered by academic institutions or learned societies independent of REMS-related funding. We encourage you to

DDRP Letter 2

Page 1 of 2

<sup>&</sup>lt;sup>1</sup> The branded and generic drug products subject to this REMS include all: a) extended-release, oral-dosage forms containing: hydromorphone, morphine, oxycodone, oxymorphone, or tapentadol; b) fentanyl and buprenorphine-containing transdermal delivery systems; <u>and</u> c) methadone tablets and solutions that are indicated for use as analgesics.

#### Prescriber Letter #2

successfully complete REMS-compliant training from an accredited CE provider to improve your ability to prescribe these medications more safely.

#### **Prescriber Action**

Under the REMS, you are **strongly encouraged** to do **all** of the following:

- Train (Educate Yourself) Complete REMS-compliant training on the ER/LA opioid analgesics offered by an accredited provider of continuing education (CE) for your discipline.
- Counsel Your Patients Discuss the safe use, serious risks, storage, and disposal of ER/LA opioid analgesics with
  patients and their caregivers every time you prescribe these medicines. Use the enclosed Patient Counseling
  Document on Extended-Release/Long-Acting Opioid Analgesics (PCD) to facilitate these discussions.
- Emphasize Patient and Caregiver Understanding of the Medication Guide Stress to patients and their caregivers the importance of reading the Medication Guide that they will receive from their pharmacist every time an ER/LA opioid analgesic is dispensed to them, as information may have changed.
- Consider Using Other Tools In addition to the PCD, there are other publicly-available tools to improve patient, household, and community safety when using ER/LA opioids, as well as compliance with conditions of treatment, including Patient-Prescriber Agreements (PPAs) and risk assessment instruments.

A listing of REMS-compliant training funded under this REMS appears on www.ER-LA-opioidREMS.com.

#### The Patient Counseling Document on Extended-Release/Long-Acting Opioid Analgesics (PCD)

Enclosed with this letter is the Patient Counseling Document that was developed under the REMS for ER/LA opioid analgesics to assist you in having important conversations with patients for whom you select an ER/LA opioid analgesic. It contains important safety information common to the drug products subject to this REMS and includes space for you to write additional information to help your patients use their specific ER/LA opioid analgesic safely. The PCD should be provided to the patient or their caregivers should be counseled on:

- the importance of taking these medicines exactly as you prescribe them,
- the need to store ER/LA opioid analgesics safely and securely out of the reach of children, pets, and household members to avoid risks from unintended exposure,
- the importance of not sharing these medications, even if someone has the same symptoms as the patient, and
- the proper methods of disposal of unneeded ER/LA opioid analgesics.

You can re-order or print additional copies of the PCD from www.ER-LA-opioidREMS.com.

#### Adverse Event Reporting

To report all suspected adverse reactions associated with the use of the ER/LA opioid analgesics, contact:

- the pharmaceutical company that markets the specific product, or
- the FDA MedWatch program:
  - by phone at 1-800-FDA-1088 (1-800-332-1088) or
  - online at <u>www.fda.gov/medwatch/report.htm</u>

More information about this REMS can be obtained at: <u>www.ER-LA-opioidREMS.com</u> or by calling the ER/LA Opioid Analgesic REMS Call Center at 1-800-503-0784.

#### Sincerely,

The ER/LA Opioid Analgesic Companies

DDRP Letter 2

#### Prescriber Letter #3

#### FDA-Required REMS Program for Serious Drug Risks

Subject:	Risk Evaluation and Mitigation Strategy (REMS) for all extended-release/long-acting opioid
	analgesic drug products due to their risks of misuse, abuse, addiction, and overdose

#### Dear DEA-Registered Prescriber:

You are receiving this letter because you recently registered with DEA to prescribe Schedule II or III drugs. The purpose of this letter is to inform you about a Risk Evaluation and Mitigation Strategy (REMS) that has been required by the U.S. Food and Drug Administration (FDA) for all extended-release and long-acting (ER/LA) opioid analgesic drug products.

ER/LA opioid analgesics are used for the management of pain severe enough to require daily, around-the-clock, long-term opioid treatment and for which alternative treatment options are inadequate. Because of the risks of addiction, abuse and misuse with opioids, even at recommended doses, and because of the greater risks of overdose and death with extended-release formulations, reserve ER/LA opioid analgesics for use in patients for whom alternative treatment options (e.g. non-opioid analgesics or immediate-release opioids) are ineffective, not tolerated, or would be otherwise inadequate to provide sufficient management of pain.

They can be safe and effective in appropriately selected patients when used as directed. However, opioid analgesics are also associated with serious risks and are at the center of a major public health crisis of increased misuse, abuse, addiction, overdose, and death.

FDA determined that a REMS was necessary to ensure that the benefits of ER/LA opioid analgesics continue to outweigh their risks of adverse outcomes (addiction, unintentional overdose, and death) resulting from inappropriate prescribing, abuse, and misuse. A REMS is a strategy to manage a known or potential serious risk associated with a drug product. In the interest of public health and to minimize the burden on the healthcare delivery system of having multiple unique REMS programs, the pharmaceutical companies subject to this REMS have joined together to implement the REMS for all ER/LA opioid analgesic drug products.

The ER/LA Opioid Analgesic REMS has three principal components:

- a) prescriber training on all ER/LA opioid analgesics,
- b) a Patient Counseling Document on Extended-Release/Long-Acting Opioid Analgesics (PCD), and
- c) a unique Medication Guide for each ER/LA opioid analgesic drug product.

The branded and generic drug products subject to this REMS include all:

- extended-release, oral-dosage forms containing
  - hydrocodone,
  - hydromorphone,
  - morphine,
  - oxycodone,
  - oxymorphone, or
  - tapentadol;
- fentanyl and buprenorphine-containing transdermal delivery systems; and
- methadone tablets and solutions that are indicated for use as analgesics.

#### Prescriber Action

Under the REMS, you are **strongly encouraged** to do **all** of the following:

- Train (Educate Yourself) Complete REMS-compliant training on the ER/LA opioid analgesics offered by an
  accredited provider of continuing education (CE) for your discipline. REMS-compliant training will: (a) be delivered
  by accredited CE providers; (b) cover all elements of the FDA Blueprint for Prescriber Education for Extended-Release
  and Long-Acting Opioid Analgesics ("FDA Blueprint"); (c) include a knowledge assessment; and (d) be subject to
  independent audit of content and compliance with applicable accrediting standards.
- Counsel Your Patients Discuss the safe use, serious risks, storage, and disposal of ER/LA opioid analgesics with patients and their caregivers every time you prescribe these medicines. Use the enclosed Patient Counseling Document on Extended-Release/Long-Acting Opioid Analgesics (PCD) to facilitate these discussions.

DDRP Letter 3

Page 1 of 2

- Emphasize Patient and Caregiver Understanding of the Medication Guide Stress to patients and their caregivers the importance of reading the Medication Guide that they will receive from their pharmacist every time an ER/LA opioid analgesic is dispensed to them, as information may have changed.
- Consider Using Other Tools In addition to the PCD, there are other publicly available tools to improve patient, household and community safety when using ER/LA opioid analgesics, as well as compliance with conditions of treatment, including Patient-Prescriber Agreements (PPAs) and risk assessment instruments.

#### **REMS-compliant Training Programs**

REMS-compliant training is a critical component of the ER/LA Opioid Analgesics REMS program. REMS-compliant training will focus on the safe prescribing of ER/LA opioid analgesics. The FDA developed core messages to be communicated to prescribers in the FDA Blueprint for Prescriber Education for Extended-Release and Long-Acting Opioid Analgesics ("FDA Blueprint"), which is being used by accredited CE providers to develop the REMS-compliant training courses. The Blueprint is available at <u>http://www.fda.gov/downloads/Drugs/DrugSafety/InformationbyDrugClass/UCM277916.pdf</u>

REMS-compliant training for prescribers includes both general and product-specific drug information, as well as information on weighing the benefits and risks of opioid therapy, appropriate patient selection, managing and monitoring patients, and counseling patients on the safe use of these drugs. In addition, the education includes information on how to recognize evidence of, and the potential for, opioid misuse, abuse, addiction, and overdose. REMS-compliant training may also be offered by academic institutions or learned societies independent of REMS-related funding. We encourage you to successfully complete REMS-compliant training from an accredited CE provider to improve your ability to prescribe these medications more safely.

For a listing of available REMS-compliant training offered by accredited CE providers under the REMS, visit <u>www.ER-LA-opioidREMS.com</u>.

#### The Patient Counseling Document on Extended-Release/Long-Acting Opioid Analgesics (PCD)

Enclosed with this letter is the Patient Counseling Document that was developed under the REMS for ER/LA opioid analgesics and designed to assist you in having important conversations with patients for whom you select an ER/LA opioid analgesic. It contains important safety information common to the drug products subject to this REMS, and includes space for you to write additional information to help your patients use their ER/LA opioid analgesic safely. The PCD should be provided to the patient or their caregiver at the time of prescribing. Patients and their caregivers should be counseled on:

- · the importance of taking these medicines exactly as you prescribe them,
- the need to store ER/LA opioid analgesics safely and securely out of the reach of children, pets, and household members – to avoid risks from unintended exposure,
- the importance of not sharing these medications, even if someone has the same symptoms as the patient, and
   the proper methods of disposal of unneeded ER/LA opioid analgesics.

You can re-order or print additional copies of the PCD from www.ER-LA-opioidREMS.com.

#### Adverse Event Reporting

To report all suspected adverse reactions associated with the use of the ER/LA opioid analgesics, contact:

- the pharmaceutical company that markets the specific product, or
- the FDA MedWatch program:
  - by phone at 1-800-FDA-1088 (1-800-332-1088) or
  - online at <u>www.fda.gov/medwatch/report.htm</u>

More information about this REMS can be obtained at: <u>www.ER-LA-opioidREMS.com</u> or by calling the ER/LA Opioid Analgesic REMS Call Center at 1-800-503-0784.

Sincerely,

The ER/LA Opioid Analgesic REMS Companies DDRP Letter 3

# FDA-Required REMS Program for Serious Drug Risks

Subject: Announcement of a Risk Evaluation and Mitigation Strategy (REMS) for all extended-release/longacting opioid analgesic drug products due to their risks of misuse, abuse, addiction, and overdose

Dear <Professional Organization/Licensing Board>:

We encourage you to share the following information with your <members/licensees>.

Extended-release and long-acting (ER/LA) opioid analgesics are approved for the management of chronic moderate-to-severe pain in the U.S., and can be safe and effective in appropriately selected patients when used as directed. However, opioid analgesics are also associated with serious risks and are at the center of a major public health crisis of increased misuse, abuse, addiction, overdose, and death.

The U.S. Food and Drug Administration (FDA) has determined that a Risk Evaluation and Mitigation Strategy (REMS) is necessary for ER/LA opioid analgesics to ensure that the benefits continue to outweigh the risks of adverse outcomes (addiction, unintentional overdose, and death) resulting from inappropriate prescribing, abuse, and misuse. A REMS is a strategy to manage a known or potential serious risk associated with a drug product. In the interest of public health and to minimize the burden on the healthcare delivery system from having multiple unique REMS programs, pharmaceutical companies subject to this REMS have joined together to implement this REMS for all ER/LA opioid analgesic drug products.

The principal components of this REMS are:

- a) Prescriber training on all ER/LA opioid analgesics,
- b) the Patient Counseling Document on Extended-Release and Long-Acting Opioid Analgesics (PCD), and
- c) a unique Medication Guide for each ER/LA opioid analgesic drug product.

The branded and generic drug products subject to this REMS include all:

- extended-release, oral-dosage forms containing
  - hydromorphone,
  - morphine,
     oxycodone,
  - oxycouolic,
     oxymorphone, or
  - tapentadol;
- fentanyl and buprenorphine-containing transdermal delivery systems; and
- methadone tablets and solutions that are indicated for use as analgesics.

# Prescriber Action

Under the REMS, prescribers are strongly encouraged to do all of the following:

- **Train (Educate Themselves)** Complete REMS-compliant training offered by an accredited provider of continuing education (CE) for their discipline. This training is being developed and will be offered early next year at no or nominal cost to prescribers. You will be notified when REMS-compliant training will become available. *REMS-compliant training* will: (a) be delivered by accredited CE providers; (b) cover all elements of the FDA Blueprint for Prescriber Education for Extended-Release and Long-Acting Opioid Analgesics ("FDA Blueprint"); (c) include a post-course knowledge assessment; and (d) be subject to independent audit of content and compliance with applicable accrediting standards.
- Counsel Their Patients Discuss the safe use, storage, and disposal of ER/LA opioid analgesics with patients and their caregivers every time they prescribe these medicines. The enclosed Patient Counseling Document (PCD) on Extended-Release/Long-Acting Opioid Analgesics should be used to facilitate these discussions.

DPOLB Letter 1

Page 1 of 2

- Emphasize Understanding the Medication Guide Stress to patients and their caregivers the importance of reading the Medication Guide that they will receive from their pharmacist every time an ER/LA opioid analgesic is dispensed to them, as information in the Medication Guide may have changed.
- Consider Using other Tools In addition to the PCD, there are other publicly-available tools to improve patient, household, and community safety when using ER/LA opioid analgesics, as well as compliance with conditions of treatment, including Patient-Prescriber Agreements (PPAs) and risk assessment instruments.

#### **REMS-compliant Training Programs**

A critical component of the ER/LA Opioid Analgesics REMS program is essential safety education for prescribers. REMScompliant training for prescribers, as described previously, will include both general and product-specific drug information, as well as information on weighing the benefits and risks of opioid therapy, appropriate patient selection, managing and monitoring patients, and counseling patients on the safe use of these drugs. In addition, the education will include information on how to recognize evidence of, and the potential for, opioid misuse, abuse, addiction, and overdose.

It will be some time before the REMS-compliant training funded by educational grants from the pharmaceutical companies subject to this REMS becomes available. The FDA developed core messages to be communicated to prescribers in the <u>FDA</u> <u>Blueprint for Prescriber Education for Extended-Release and Long-Acting Opioid Analgesics ("FDA Blueprint")</u>, which will be used by accredited CE providers to develop REMS-compliant training courses. A follow-up letter notifying you of the availability of REMS-compliant training funded under this REMS will be sent not later than thirty (30) days before such training is offered. However, REMS-compliant education may also be offered by academic institutions or professional societies independent of REMS-related funding. We encourage you to successfully complete REMS-compliant training offered to improve your ability to prescribe these medications more safely.

#### The Patient Counseling Document on Extended-Release/Long-Acting Opioid Analgesics (PCD)

Enclosed with this letter is the Patient Counseling Document that was developed under the REMS for ER/LA opioid analgesics to assist you in having important conversations with patients for whom you select an ER/LA opioid analgesic. It contains important safety information common to the drug products subject to this REMS, and includes space for you to write additional information to help your patients use their specific ER/LA opioid analgesic safely. The PCD should be provided to the patient or their caregiver at the time of prescribing. Patients and their caregivers should be counseled on:

- the importance of taking these medicines exactly as you prescribe them,
- the need to store ER/LA opioid analgesics safely and securely out of the reach of children, pets, and household members – to avoid risks from unintended exposure/ingestion,
- the importance of not sharing these medications, even if someone has the same symptoms as the patient, and
- the proper methods of disposal of unneeded ER/LA opioid analgesics.

Prescribers can re-order or print additional copies of the PCD from www.ER-LA-opioidREMS.com.

#### Adverse Event Reporting

To report all suspected adverse reactions associated with the use of the ER/LA opioid analgesics, contact:

- the pharmaceutical company that markets the specific product, or
- the FDA MedWatch program:
  - by phone at 1-800-FDA-1088 (1-800-332-1088) or
  - online at <u>www.fda.gov/medwatch/report.htm</u>

More information about this REMS can be obtained at: <u>www.ER-LA-opioidREMS.com</u> or by calling the ER/LA Opioid Analgesic REMS Call Center at 1-800-503-0784.

# Sincerely,

The ER/LA Opioid Analgesic REMS Companies DPOLB Letter 1

## FDA-Required REMS Program for Serious Drug Risks

 
 Subject:
 Availability of Risk Evaluation and Mitigation (REMS)-compliant training under the REMS for all extended-release/long-acting opioid analgesic drug products.

#### Dear <Professional Organization/Licensing Board>:

Extended-release and long-acting (ER/LA) opioid analgesics<sup>⊥</sup> are approved for the management of chronic moderate-to-severe pain in the U.S., and can be safe and effective in appropriately selected patients when used as directed. However, opioid analgesics are also associated with serious risks and are at the center of a major public health crisis of increased misuse, abuse, addiction, overdose, and death. The U.S. Food and Drug Administration (FDA) determined that a Risk Evaluation and Mitigation Strategy (REMS) was necessary to ensure that the benefits of ER/LA opioid analgesics continue to outweigh the risks of adverse outcomes (addiction, unintentional overdose, and death) resulting from inappropriate prescribing, abuse, abuse, and misuse.

Several months ago, you received a letter announcing the REMS for all ER/LA opioid analgesic drug products, which explained that the principal components of this REMS are:

- a) Prescriber training on all ER/LA opioid analgesics,
- b) the Patient Counseling Document on Extended-Release/Long-Acting Opioid Analgesics (PCD), and
- c) a unique Medication Guide for each ER/LA opioid analgesic drug product.

#### **REMS-compliant Training Programs**

The purpose of this letter is to provide notification of the upcoming availability of REMS-compliant training on ER/LA opioid analgesics – provided at a nominal to no cost to prescribers. REMS-compliant training is a critical component of the ER/LA Opioid Analgesics REMS program and constitutes essential safety education for prescribers. *REMS-compliant training* will: (a) be delivered by accredited CE providers; (b) cover all elements of the FDA Blueprint for Prescriber Education for Extended-Release and Long-Acting Opioid Analgesics ("FDA Blueprint"); (c) include a post-course knowledge assessment; and (d) be subject to independent audit of content and compliance with applicable accrediting standards.

REMS-compliant training will focus on the safe prescribing of ER/LA opioid analgesics. The FDA developed core messages to be communicated to prescribers in the FDA Blueprint, which will be used by accredited CE providers to design and deliver REMS-compliant training courses. The FDA Blueprint is available at http://www.fda.gov/downloads/AboutFDA/ReportsManualsForms/Forms/UCM163919.pdf

The core messages include:

- Understand how to assess patients and determine which may be appropriate for treatment with ER/LA opioid analgesics.
- Be familiar with how to initiate therapy, modify dose, and discontinue use of ER/LA opioid analgesics.
- Be knowledgeable about how to manage and monitor ongoing therapy with ER/LA opioid analgesics.
  Know how to counsel patients and caregivers about the safe use of ER/LA opioid analgesics,
- including proper storage and disposal.
- Be familiar with general and product-specific drug information concerning ER/LA opioid analgesics.

DPOLB Letter 2

Page 1 of 2

<sup>1</sup> The branded and generic drug products subject to this REMS include *all*: a) extended-release, oral-dosage forms containing: hydrocodone, hydromorphone, morphine, oxycodone, oxymorphone, or tapentado; b) fentanyl and buprenorphine-containing transdermal delivery systems; <u>and</u> c) methadone tablets and solutions that are indicated for use as analgesics.

REMS-compliant training for prescribers also includes information on weighing the benefits and risks of opioid therapy and how to recognize evidence of, and the potential for, opioid misuse, abuse, addiction, and overdose. REMS-compliant training may also be offered by academic institutions or learned societies independent of REMS-related funding. We encourage you to successfully complete REMS-compliant training from an accredited CE provider to improve your ability to prescribe these medications more safely.

#### Requested Action

We ask you to encourage your <members/licensees> to successfully complete REMS-compliant training to improve their ability to prescribe these medications more safely. Under the REMS, prescribers are **strongly encouraged** to do **all** of the following:

- Train (Educate Themselves) Complete REMS-compliant training offered by an accredited provider of continuing education (CE) for their discipline.
- Counsel Their Patients Discuss the safe use, serious risks, storage, and disposal of ER/LA opioid
  analgesics with patients and their caregivers every time you prescribe these medicines. Use the
  enclosed Patient Counseling Document on Extended-Release/Long-Acting Opioid Analgesics (PCD) to
  facilitate these discussions. Prescribers can re-order or print additional copies of the PCD from
  www.ER-LA-opioidREMS.com.
- Emphasize Patient and Caregiver Understanding of the Medication Guide Stress to patients and their caregivers the importance of reading the Medication Guide that they will receive from their pharmacist every time an ER/LA opioid analgesic is dispensed to them, as information may have changed.
- **Consider Using Other Tools** In addition to the PCD, there are other publicly-available tools to improve patient, household, and community safety when using ER/LA opioids, as well as compliance with conditions of treatment, including Patient-Prescriber Agreements (PPAs) and risk assessment instruments.

A listing of REMS-compliant training funded under this REMS appears on <u>www.ER-LA-opioidREMS.com</u>.

# Adverse Event Reporting

To report all suspected adverse reactions associated with the use of the ER/LA opioid analgesics, contact:

- the pharmaceutical company that markets the specific product, or
- the FDA MedWatch program:
  - by phone at 1-800-FDA-1088 (1-800-332-1088) or
  - online at <u>www.fda.gov/medwatch/report.htm</u>

More information about this REMS can be obtained at: <u>www.ER-LA-opioidREMS.com</u> or by calling the ER/LA Opioid Analgesic REMS Call Center at 1-800-503-0784.

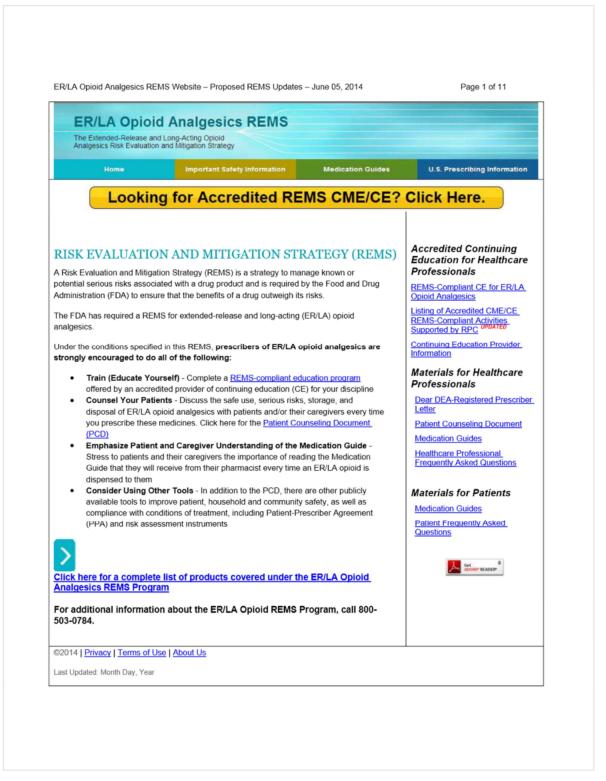

Sincerely,

•

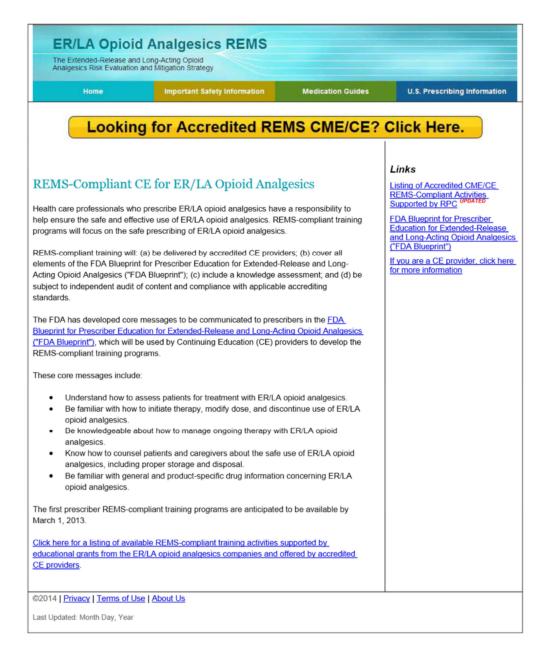

The ER/LA Opioid Analgesic Companies

## Selected Important Safety Information

# ABUSE POTENTIAL AND RISK OF LIFE-THREATENING RESPIRATORY DEPRESSION

The branded and generic drug products subject to this REMS include all:

- extended-release, oral dosage forms containing
  - hydrocodone,
  - hydromorphone,
  - o morphine,
  - o oxycodone,
  - o oxymorphone, or
  - tapentadol;
- fentanyl and buprenorphine-containing transdermal delivery systems; and
- methadone tablets and solutions that are indicated for use as analgesics.

These drug products will be collectively referred to as Extended-Release and Long-Acting (ER/LA) prescription opioid analgesics.

ER/LA prescription opioid analgesics are opioid agonists and Schedule II or, Schedule III, as is the case with transdermal buprenorphine, controlled substances with abuse liabilities similar to other opioid agonists. Schedule II and Schedule III opioid substances have high potential for abuse and risk of fatal overdose due to respiratory depression.

ER/LA opioid analgesics can be abused in a manner similar to other opioid agonists, legal or illicit. This should be considered when prescribing or dispensing ER/LA opioid analgesics in situations where the physician or pharmacist is concerned about an increased risk of misuse, abuse, or diversion.

Persons at increased risk for opioid abuse include those with a personal or family history of substance abuse (including drug or alcohol abuse or addiction) or mental illness (e.g., major depression). Patients should be assessed for their clinical risks for opioid abuse or addiction prior to being prescribed opioids. All patients receiving opioids should be routinely monitored for signs of misuse, abuse and addiction.

ER/LA opioid analgesics containing buprenorphine, fentanyl, hydrocodone, hydromorphone, methadone, morphine, oxycodone, oxymorphone, and tapentadol are indicated for the management of pain severe enough to require daily, around-the-clock, long-term opioid treatment and for which alternative treatment options are inadequate. Extended-release oxycodone (OxyContin) is also indicated in pediatric patients 11 years of age and older who are already receiving and tolerate a minimum daily opioid dose of at least 20 mg oxycodone orally or its equivalent. **ER/LA opioid analgesics are not indicated for acute pain**.

Because of the risks of addiction, abuse and misuse with opioids, even at recommended doses, and because of the greater risks of overdose and death with extended-release formulations, reserve ER/LA opioid analgesics reserved for use in patients for whom alternative treatment options (e.g. non-opioid analgesics or immediate-release opioids) are ineffective, not tolerated, or would be otherwise be inadequate to provide sufficient management of pain. For some of the ER/LA opioid analgesics, certain strengths, certain daily doses, and in specific indicated patient populations (e.g., pediatric patients) are for use in opioid-tolerant patients only. Consult the individual Full Prescribing Information for the definition of opioid tolerance and dosing instructions for patients. ER/LA opioid analgesics are not intended for acute pain, pain that is mild or not expected to persist for an extended period of time, or for use on an as-needed basis.

Page 7 of 11

ER/LA opioid analgesic formulations have product specific dosage and administration instructions. Refer to the individual Full Prescribing Information for specific doses and dosing recommendations.

ER/LA oral dosage forms must be swallowed whole and must not be cut, broken, chewed, crushed, or dissolved. Taking cut, broken, chewed, crushed or dissolved oral dosage forms leads to rapid release and absorption of a potentially fatal dose of the opioid agonist. For patients who have difficulty swallowing their medication whole, certain oral products may be opened and sprinkled on applesauce—refer to the product-specific Full Prescribing Information.

Transdermal dosage forms must not be cut, damaged, chewed, swallowed or used in ways other than indicated since this may cause choking or overdose resulting in death. Avoid direct external heat sources to transdermal application site and surrounding area.

As stated in the **Boxed Warning**, prescribers need to be aware of the following:

- ER/LA Opioid Analgesics exposes users to risks of addictions, abuse and misuse, which can lead to overdose and death. Assess each patient's risk before prescribing and monitor regularly for development of these behaviors and conditions.
- Serious life-threatening or fatal respiratory depression may occur. Monitor closely, especially upon initiation or following a dose increase. Instruct patients to swallow ER/LA Opioid Analgesics tablets whole to avoid exposure/ingestion to a potentially fatal dose.
- Accidental ingestion of ER/LA Opioid Analgesics, especially in children, can result in fatal overdose.
- Prolonged use of ER/LA Opioid Analgesics during pregnancy can result in neonatal opioid withdrawal syndrome, which may be life-threatening if not recognized and treated. If opioid use is required for a prolonged period in a pregnant woman, advise the patient of the risk of neonatal opioid withdrawal syndrome and ensure that appropriate treatment will be available.
- Initiation of CYP 3A4 inhibitors (or discontinuation of CYP 3A4 inducers) can result in a fatal overdose.

ER/LA opioid analgesics are contraindicated in patients with a known hypersensitivity to any of the components of ER/LA opioid analgesics, including the respective active ingredients, or in any situation where opioids are contraindicated; in patients who have significant respiratory depression; in patients who have acute or severe bronchial asthma; or in patients who have or are suspected of having paralytic ileus. **These contraindications are not all-inclusive of those for each individual ER/LA opioid analgesic;** therefore, the Full Prescribing Information for the individual ER/LA opioid analgesics must be consulted.

The concomitant use of ER/LA opioid analgesics containing buprenorphine, fentanyl, methadone, or oxycodone with cytochrome P450 3A4 inhibitors may result in increased opioid plasma concentrations and may cause potentially fatal respiratory depression.

# **Adverse Reactions**

Serious adverse reactions of ER/LA opioid analgesics include life threatening respiratory depression, apnea, respiratory arrest, circulatory depression, hypotension, and death.

Page 8 of 11

Accidental exposure/ingestion of ER/LA opioids, especially in children, can result in death.

With methadone, cases of QT interval prolongation and serious arrhythmia (torsades de pointes) have been observed during treatment. Most cases involve patients being treated for pain with large, multiple daily doses of methadone, although cases have been reported in patients receiving doses commonly used for maintenance treatment of opioid addiction. A positive-controlled study of the effects of transdermal buprenorphine on the QTc interval in healthy subjects demonstrated no clinically meaningful effect at a transdermal buprenorphine dose of 10 mcg/hour; however, a transdermal buprenorphine dose of 40 mcg/hour (given as two 20 mcg/hour transdermal buprenorphine systems) was observed to prolong the QTc interval.

The most common adverse reactions of ER/LA opioid analgesics include constipation, nausea, somnolence, dizziness, vomiting, pruritus, headache, dry mouth, asthenia, and sweating. Additionally, the following have been reported with transdermal buprenorphine and fentanyl products: application site pruritus, application site erythema, and application site rash. Refer to the individual Full Prescribing Information for all product-specific adverse reactions.

Page 9 of 11

#### Adverse Event Reporting

Please report all suspected adverse reactions associated with the use of the specific ER/LA opioid analgesic to the appropriate company. You may also report adverse events directly to the FDA's MedWatch Reporting System:

- by calling 1-800-FDA-1088 (1-800-332-1088),
- online at <u>https://www.accessdata.fda.gov/scripts/medwatch/medwatch-online.htm</u> or
- by mail using the fillable portable document format (PDF) Form FDA 3500, available at http://www.fda.gov/downloads/AboutFDA/ReportsManualsForms/Forms/UCM163919.pdf

## **Patient Counseling Document and Medication Guide**

The Patient Counseling Document (PCD) on Extended-Release/Long-Acting Opioids is a tool unique to this REMS designed to facilitate important discussions with your patients and their caregivers for whom you select an ER/LA opioid analgesic. The PCD should be provided to the patient and/or their caregiver at the time of prescribing. It contains important safety information about the drug products subject to this REMS and includes space for you to write additional information to help your patients use their ER/LA opioid analgesic safely.

Patients and their caregivers should be counseled on: the importance of taking these medicines exactly as you prescribe them, the need to store ER/LA opioid analgesics safely and securely—out of the reach of children, pets, and household acquaintances to avoid risks from unintended exposure, the importance of not sharing these medications, even if someone has the same symptoms as the patient, and the proper methods of disposal of unneeded ER/LA opioid analgesics.

It is important that you encourage your patients and their caregivers to read the relevant Medication Guide when they pick up their prescription from the pharmacy. The Medication Guide provides important information on the safe and effective use of the specific ER/LA opioid analgesic prescribed.
