Transmucosal Immediate Release Fentanyl (TIRF) Products
Risk Evaluation and Mitigation Strategy (REMS)

TIRF REMS Access Program
Education Program for Prescribers and Pharmacists
Products Covered Under this Program:

• Abstral® (fentanyl) sublingual tablets
• Actiq® (fentanyl citrate) oral transmucosal lozenge
• Fentora® (fentanyl buccal tablet)
• Lazanda® (fentanyl) nasal spray
• Onsolis® (fentanyl buccal soluble film)
• Subsys® (fentanyl sublingual spray)
• Approved generic equivalents of these products are also covered under this program
TIRF REMS Access Education Program:

• Before you can enroll in the TIRF REMS Access program, you must review the Education Program, successfully complete the Knowledge Assessment, and sign the acknowledgement statements on the enrollment form.

• The Education Program and enrollment can be completed online at www.TIRFREMSaccess.com. The enrollment form may also be downloaded from the website on the Resources tab, completed and faxed into the program at 1-866-822-1487.

• Renewal of enrollment is required every 2 years. You will receive a reminder to renew your enrollment at the appropriate time.

• Prescribers writing prescriptions for inpatient use only do not need to enroll in the TIRF REMS Access program.
TIRF REMS Access Program Goals:

The goals of the TIRF REMS Access program are to mitigate the risk of misuse, abuse, addiction, overdose, and serious complications due to medication errors by:

1. Prescribing and dispensing TIRF medicines only to appropriate patients, which includes use only in opioid-tolerant patients.

2. Preventing inappropriate conversion between fentanyl products.

3. Preventing accidental exposure to children and others for whom it was not prescribed.

4. Educating prescribers, pharmacists, and patients on the potential for misuse, abuse, addiction, and overdose.
TIRF REMS Access Education Program

Overview

• This Education Program contains key safety information critical for minimizing the risks associated with TIRF medicines.

• The program will address:
  o Appropriate patient selection
  o Understanding each patient’s risk factors for misuse, abuse, addiction and overdose
  o Dosage and administration
  o Patient counseling
  o Effective patient management and follow-up
TIRF REMS Access Education Program
Overview (cont.)

• Information on the TIRF REMS Access program requirements and operations is provided in the TIRF REMS Access program overviews for prescribers and pharmacies, which can be accessed at www.TIRFREMSaccess.com.

• This Education Program is NOT a substitute for reading the Full Prescribing Information for each TIRF medicine.

• Please also review the Full Prescribing Information and familiarize yourself with the contents of the Medication Guide for each product prescribed.
Appropriate Patient Selection

Indication:

• TIRF medicines are indicated only for the management of breakthrough pain in adult patients with cancer 18 years of age and older who are already receiving and who are tolerant to regular opioid therapy for underlying persistent cancer pain.
  – The only exception is for Actiq, and its generic equivalents, which are approved for cancer patients 16 years and older.

• TIRF medicines are contraindicated in opioid non-tolerant patients because life-threatening respiratory depression and death could occur at any dose in patients not taking chronic opioids.
Appropriate Patient Selection (cont.)

Definition of Opioid Tolerance:

- Patients considered **opioid-tolerant** are those who are taking, **for one week or longer**, at least:
  - 60 mg oral morphine/day
  - 25 mcg transdermal fentanyl/hour
  - 30 mg oral oxycodone/day
  - 8 mg oral hydromorphone/day
  - 25 mg oral oxymorphone/day
  - OR an equianalgesic dose of another oral opioid

- TIRF medicines are intended to be used only in the care of opioid-tolerant patients with cancer and only by healthcare professionals who are knowledgeable of, and skilled in, the use of Schedule II opioids to treat cancer pain.
Appropriate Patient Selection (cont.)

Contraindications:

• TIRF medicines must not be used in opioid non-tolerant patients.

• TIRF medicines are contraindicated in the management of acute or postoperative pain, including headache/migraine and dental pain. Please see each TIRF medicine’s Full Prescribing Information for a full list of specific situations in which TIRF medicines are not indicated or are contraindicated.

• TIRF medicines are contraindicated in patients with known intolerance or hypersensitivity to any of its components or the drug fentanyl.

Life-threatening respiratory depression could occur at any dose in opioid non-tolerant patients. Deaths have occurred in opioid non-tolerant patients treated with some fentanyl products.
Determine Patient-Specific Risk Factors

1. Risk of Misuse, Abuse, Addiction and Overdose

• TIRF medicines contain fentanyl, an opioid agonist and Schedule II controlled substance. TIRF medicines can be abused in a manner similar to other opioid agonists, legal and illicit.
• These risks should be considered when prescribing or dispensing TIRF medicines in situations where the prescriber or pharmacist is concerned about an increased risk of misuse, abuse, addiction, or overdose.
• Risk factors for opioid abuse include:
  o A history of past or current alcohol or drug abuse
  o A history of psychiatric illness
  o A family history of illicit drug use or alcohol abuse
• Concerns about abuse and addiction should not prevent the proper management of pain.
Determine Patient-Specific Risk Factors

1. Risk of Misuse, Abuse, and Addiction and Overdose (cont.)

- All patients treated with opioids require careful monitoring for signs of abuse and addiction because use of opioid analgesic products carries the risk of addiction even under appropriate medical use.
- Measures to help limit abuse of opioid products:
  - Proper assessment of patients
  - Safe prescribing practices
  - Periodic re-evaluation of therapy
  - Proper dispensing and storage
  - Keeping detailed records of prescribing information
  - Keeping a signed TIRF REMS Access Patient-Depresciber Agreement Form
  - Informing patients/caregivers to protect against theft and misuse of TIRF medicines
- Manage the handling of TIRF medicines to minimize the risk of abuse, including restriction of access and accounting procedures as appropriate to the clinical setting, and as required by law.
Determine Patient-Specific Risk Factors

2. Accidental Exposure

- TIRF medicines contain fentanyl in an amount which can be fatal in:
  - children,
  - individuals for whom it is not prescribed, and
  - those who are not opioid-tolerant

- Inform patients that these products have a rapid onset of action.

- TIRF medicines must be stored safely and kept out of reach of children of all ages at all times, including toddlers through teens.

- Prescribers and pharmacists must specifically question patients or their caregivers about the presence of children in the home (on a full time or visiting basis) and counsel them regarding the dangers to children from inadvertent exposure.

- Any accidental exposure can be fatal. Talk with your patients about safe and appropriate storage and disposal of TIRF medicines.
Determine Patient-Specific Risk Factors

3. Drug Interactions

- Fentanyl is metabolized mainly via the human cytochrome P450 (CYP3A4) isoenzyme system; therefore, potential drug interactions may occur when TIRF medicines are given concurrently with agents that affect CPY3A4 activity.

- Concomitant use of TIRF medicines with CYP3A4 inhibitors (e.g., certain protease inhibitors, ketoconazole, fluconazole, diltiazem, erythromycin, verapamil) may result in potentially dangerous increases in fentanyl plasma concentrations, which could increase or prolong the drug effects and may cause potentially fatal respiratory depression.

- Patients receiving TIRF medicines who begin therapy with, or increase the dose of, CYP3A4 inhibitors are to be carefully monitored for signs of opioid toxicity over an extended period of time. Dosage increases should be done conservatively.
Dosage and Administration General

- Patients beginning treatment with a TIRF medicine MUST begin with titration from the lowest dose available for that specific product, even if they have taken another TIRF medicine. Carefully consult the initial dosing instructions in each product’s specific Full Prescribing Information.

Appropriate Conversion

- TIRF medicines are **not interchangeable** with each other, regardless of route of administration. Differences exist in the pharmacokinetics of TIRF medicines resulting in clinically important differences in the amount of fentanyl absorbed.

- TIRF medicines are **not equivalent** to any other fentanyl product, including another TIRF medicine, on a microgram-per-microgram basis. The only exception is for substitution of a generic equivalent for a branded TIRF medicine.
Dosage and Administration General

Appropriate Conversion

• As a result of these differences, the conversion of a TIRF medicine for any other TIRF medicine may result in fatal overdose.

• Converting from one TIRF medicine to a different TIRF medicine must not be done on a microgram-per-microgram basis and, must be titrated according to the labeled dosing instructions each time a patient begins use of a new TIRF medicine.
  
  • The only exception is for substitutions between a branded TIRF medicine and its generic equivalents.

• For patients being converted specifically from Actiq to Fentora, Actiq to Subsys, and Actiq to Abstral, you must refer to the Full Prescribing Information for detailed instructions.
Maintenance/Dose Adjustments for all TIRF Medicines

• Once a successful dose is found, that dose should be prescribed for each subsequent episode of breakthrough cancer pain.

• Limit the use of TIRF medicines to 4 or fewer doses per day.

• If the prescribed dose no longer adequately manages the breakthrough cancer pain for several consecutive episodes, increase the dose as described in the titration section of the prescribing information.

• Consider increasing the dose of the around-the-clock opioid medicine used for persistent cancer pain in patients experiencing more than 4 breakthrough cancer pain episodes per day.

<tbody>
<tr>
<td><strong>Abstral</strong>® (fentanyl) sublingual tablets</td>
<td>Abstral is always 100 mcg (unless the patient is being converted from ≥400 mcg ACTIQ - please see Full Prescribing Information).</td>
<td>If adequate analgesia is not obtained the patient may use a second ABSTRAL dose (after 30 minutes) as directed by their healthcare provider. No more than two doses of ABSTRAL may be used to treat an episode of breakthrough pain. Patients must wait at least 2 hours before treating another episode of breakthrough pain with ABSTRAL. If adequate analgesia was not obtained with the first 100mcg dose, continue dose escalation in a stepwise manner over consecutive breakthrough episodes until adequate analgesia with tolerable side effects is achieved. During titration, patients can be instructed to use multiples of 100 mcg tablets and/or 200 mcg tablets for any single dose. Instruct patients not to use more than 4 tablets at one time.</td>
</tr>
<tr>
<td><strong>Actiq</strong>® (fentanyl citrate) oral transmucosal lozenge</td>
<td>Always 200 mcg.</td>
<td>If the breakthrough pain episode is not relieved after 30 minutes, patients may take 1 additional dose using the same strength. Patients should not take more than 2 doses of ACTIQ per breakthrough pain episode. Patients must wait at least 4 hours before treating another breakthrough pain episode with ACTIQ. Closely follow patients and change the dosage level until adequate analgesia with tolerable side effects is achieved with a single unit.</td>
</tr>

Reference ID: 3677583
Patient Counseling

➢ Before initiating treatment with a TIRF medicine, review the product-specific Medication Guide with patients and caregivers, and counsel them on TIRF medicine risks and safe use.

• Tell patients exactly how to take the TIRF medicine. Instruct them to take the TIRF medicine strictly as prescribed, with special regard to dosage, dose titration, administration and proper disposal of partially used or unneeded TIRF medicine.

Tell the patient:

• You must be regularly using another opioid pain medicine, around-the-clock, for your constant pain.

• If you stop taking your around-the-clock opioid pain medicine for your constant pain, you must stop taking your TIRF medicine.

  • Note: Patients have had difficulty comprehending this concept; please emphasize it to your patients.
Patient Counseling

Tell the patient (cont.):

• TIRF medicines can cause serious side effects, including life-threatening breathing problems which can lead to death. You much take TIRF medicines exactly as prescribed.

• Contact me or my office if your TIRF medicine does not relieve your pain. Do not change your dose of the TIRF medicine or take the TIRF medicine more often than I have directed.

• Always store your TIRF medicine in a safe place away from children and teenagers because accidental use by a child, or anyone for whom it was not prescribed, is a medical emergency and can cause death. Use the child safety kit if one is provided with your TIRF medicine.

• Properly dispose of partially used or unneeded TIRF medicine remaining from a prescription. Refer to the Full Prescribing Information and Medication Guide for each product for specific instructions for disposal.
Patient Counseling

Tell the patient (cont.):

• Never give your TIRF medicine to anyone else, even if they have the same symptoms, since it may harm them or even cause death.

• Never sell or give away your TIRF medicine. Doing so is against the law.
Effective Patient Management & Follow-up

- All patients treated with opioids require careful monitoring. At follow-up visits:
  - Assess appropriateness of dose, and make any necessary dose adjustments to the TIRF medicine or of their around-the-clock opioid medicine.
  - Assess for signs of misuse, abuse, or addiction.
  - Be aware that abuse and addiction are separate and distinct from physical dependence and tolerance.
    - Abuse of opioids can occur in the absence of addiction, and is characterized by misuse for non-medical purposes, often in combination with other psychoactive substances.
    - The possibility of physical and/or psychological dependence should be considered when a pattern of inappropriate behavior is observed.
  - Careful record keeping of prescribing information, including quantity, frequency, and renewal requests is strongly advised.
