TRACLEER SUPPLY – PATIENT INFORMATION SHEET

ATTENTION

Based on a request from your prescriber, we are sending you more than a 30-day supply of Tracleer.

While you are traveling outside of the United States, it is critical that you obtain liver function and pregnancy testing (if you are a female of childbearing potential) EVERY 30 days and have those tests reviewed by your prescriber to assure the results are acceptable. The proof of the testing and the results of those tests should be communicated to your prescriber in the US.

Tracleer can cause liver damage. Therefore you must have a blood test to check your liver function before you start Tracleer and each month after that. See the “What is the most important information I should know about Tracleer?” section of the Tracleer Medication Guide for information about the symptoms of liver problems.

Tracleer can cause serious birth defects if taken during pregnancy. You must not be pregnant when you start taking Tracleer or during Tracleer treatment. Serious birth defects from Tracleer can happen early in pregnancy. Females who are able to get pregnant must have a negative pregnancy test before starting and each month during Tracleer treatment.

Failure to have the tests done, and the results reviewed, could lead to medical problems. By requesting and accepting this shipment containing more than a 30-day supply of Tracleer, you have agreed to obtain liver function and pregnancy tests every 30 days, have them reviewed by a healthcare provider, and have the test results promptly reported to your healthcare provider in the US.

A copy of the full Prescribing Information is included with this supply. Please give it to the healthcare provider who arranges for and reviews your liver and pregnancy tests so that he or she has information on Tracleer.

Should you have ANY medical concerns or experience any side effects, contact your healthcare provider immediately.
