iQOS POCKET CHARGER POWER

- *Blinking green: charging*
- *Solid green: charged*
- *Single green: will run out of charge soon*

CLEANING

- *Solid orange: automatic cleaning will start once charged*
- *Blinking green: cleaning in process*

iQOS Holder battery and cleaning lights blinking red: iQOS Pocket Charger is malfunctioning

ENJOYING A *HEATSTICK*

1. Grab *HeatStick* and press it into the *iQOS* Holder, ***tobacco side down*** (press *HeatStick* until filter line aligns with end of holder cap).

2. Press and hold power button for two seconds. Green status light will blink. After status light stops blinking, it's ready to enjoy.

Be sure to recharge your *iQOS* Holder after each use so you can enjoy a *HeatStick* whenever you want. You should get about 14 puffs – about the same as a conventional cigarette.

Status light will change to orange shortly before *HeatStick* is done.

Status light will go out completely when it's done. You can end your experience early by pressing down power button for five seconds.

Make sure you don't twist HeatStick because you might damage the device.

DON'T FORGET:

- *iQOS System works exclusively with HeatSticks. Never use iQOS Holder with a conventional cigarette or other products/objects.*
- *Never light HeatStick with a match, lighter or any other flame source.*

HeatStick cannot be reused, even if you choose to end your experience early.

REMOVING A *HEATSTICK*

1. Pull the cap on your *iQOS* Holder until you hear a click.

2. You can then safely remove *HeatStick* from cap and dispose responsibly. Please be sure to dispose of your *HeatStick* responsibly.

! *Removing HeatStick doesn't stop the heating process, so handle the iQOS Holder with caution.*

CLEANING

There's an automatic cleaner built into the *iQOS* System. Every 20 uses or so, the system will clean itself.

Sometimes, though, some tobacco may get lodged inside. If this happens, use the *iQOS* Cleaner so you can keep enjoying your *iQOS* System.

For m information how to use the iQOS Cleaner, please see the full user guide.

CHARGING
iQOS POCKET CHARGER

One of the great things about the *iQOS* System is that the *iQOS* Pocket Charger can be charging even while you're using the *iQOS* Holder.

Be sure to close hatch and connect *iQOS* Pocket Charger to USB cable.

You can then either use the power adapter (quickest way to charge) or insert the USB into a computer.

The *iQOS* Pocket Charger takes about 90 minutes to charge and will last for 20 uses (the equivalent of a whole pack of *HeatSticks*).

CHARGING *iQOS* HOLDER

The *iQOS* Holder only charges when placed into the *iQOS* Pocket Charger.

1. Press hatch button on *iQOS* Pocket Charger to open it up.

2. Insert the *iQOS* Holder into *iQOS* Pocket Charger, with contacts facing down and *iQOS* logo lined up with buttons on *iQOS* Pocket Charger.

contacts

Once inserted correctly, and with hatch closed, the *iQOS* Holder takes about six minutes to charge.

The iQOS Holder is designed to go in only one way. Do not force it, or you may damage it.
