The information below is provided for the Varian High Energy Linear Accelerator, following the format of 21 CFR 807.92.

1. **Submitter:** Varian Medical Systems  
   3100 Hansen Way, M/S e110  
   Palo Alto, CA 94304  
   Contact Name: Vy Tran  
   Phone: 650/424.5731  
   Fax: 650/842.5040  
   E-mail: vy.tran@varian.com

2. **Name of the Device:** Varian High Energy Linear Accelerator  
   **Trade / Proprietary Names:** Novalis Tx, Trilogy, Trilogy Tx  
   Clinac iX, Clinac Cx  
   Clinac 2100C, 2100 C/D, 2300 C/D  
   Clinac 21 EX, 23 EX  
   Clinac DHX, DMX

   **Common or Usual Names:** Novalis Tx, Trilogy, Trilogy Tx  
   Clinac iX, Clinac Cx  
   Clinac 2100C, 2100 C/D, 2300 C/D  
   Clinac 21 EX, 23 EX  
   Clinac DHX, DMX

   **Classification Name:** Medical Charged Particle Radiation Therapy System  
   21 CFR §892.5050  
   Class II

   **Product Code:** 90 IYE

3. **Predicate Device:**  
   Varian High Energy Linear Accelerator K100890

4. **Description of the Device:**

   The Varian High Energy Linear Accelerator models provide various selections among the features, specifications, and accessories that have been most recently cleared as the Varian High Energy Linear Accelerator, K100890.

   The changes to the Varian High Energy Linear Accelerator provide support for treatments using the high intensity photon treatment mode, also known as FFF (Flattening Filter Free). Additionally, couch motion rules are modified to enable the use of patient support systems where the targeted anatomy and the treatment isocenter area below the surface of the couch top. Modifications that augment existing safety controls are also included.
All other features of the Varian High Energy Linear Accelerator models remain as cleared by K100890.

5. Intended Use Statement

The Varian High Energy Linear Accelerator is intended to provide stereotactic radiosurgery and precision radiotherapy for lesions, tumors and conditions anywhere in the body when radiation treatment is indicated.

6. Indications for Use Statement

The Varian High Energy Linear Accelerator is indicated for stereotactic radiosurgery and precision radiotherapy for lesions, tumors and conditions anywhere in the body when radiation treatment is indicated.

7. Substantial Equivalence

The modified device, the Varian High Energy Linear Accelerator, is substantially equivalent to the predicate device, the Varian High Energy Linear Accelerator (K100890).

The intended use and indications for use for the device are unchanged — see items 5 and 6 above.

The functionality of the Varian High Energy Linear Accelerator is equivalent to the functionality of the Varian predicate device in safety and effectiveness. Compared with the predicate device, the Varian High Energy Linear Accelerator (K100890), the basic operation is the same.

The comparison table below illustrates the substantial equivalence of the cleared device, Varian High Energy Linear Accelerator (K100890) and the modified device, Varian High Energy Linear Accelerator.

<table>
<thead>

Summary of Performance Testing

The design control procedures applied to the development of the Varian High Energy Linear Accelerator include requirements reviews, risk analysis, and verification and validation testing.

The verification and validation testing results from bench testing support the substantial equivalence of the modified device with its predicate, the unmodified device. Testing included testing against functional requirements, validation of use cases, hazard mitigation and control testing, and testing for compliance with applicable international medical device standards including the general safety standard IEC 60601-1, the electromagnetic compatibility standard IEC 60601-1-2, and the medical accelerator safety standard IEC 60601-2-1.

The objectives of the testing were to ensure that the pre-defined acceptance criteria and pass/fail criteria were met, including all specifications, functional requirements, use cases, hazard mitigations, and compliance with applicable international standards.

The conclusion from the results of the performance testing summarized above is that the defined criteria have been met, and that the specifications have been substantiated by the testing. The table in item 7 presents the key specifications relevant to the modifications for the Varian High Energy Linear Accelerator.

Ms. Vy Tran  
Vice President of Regulatory Affairs and Quality Systems  
Varian Medical Systems  
3100 Hansen Way, M/S E-110  
PALO ALTO CA 94304-1129

Re:   K112839  
Trade/Device Name: Varian High Energy Linear Accelerator  
Regulation Number: 21 CFR 892.5050  
Regulation Name: Medical charged-particle radiation therapy system  
Regulatory Class: II  
Product Code: IYE  
Dated: September 26, 2011  
Received: September 28, 2011

Dear Ms. Tran:

We have reviewed your Section 510(k) premarket notification of intent to market the device referenced above and have determined the device is substantially equivalent (for the indications for use stated in the enclosure) to legally marketed predicate devices marketed in interstate commerce prior to May 28, 1976, the enactment date of the Medical Device Amendments, or to devices that have been reclassified in accordance with the provisions of the Federal Food, Drug, and Cosmetic Act (Act) that do not require approval of a premarket approval application (PMA). You may, therefore, market the device, subject to the general controls provisions of the Act. The general controls provisions of the Act include requirements for annual registration, listing of devices, good manufacturing practice, labeling, and prohibitions against misbranding and adulteration.

If your device is classified (see above) into class II (Special Controls), it may be subject to such additional controls. Existing major regulations affecting your device can be found in Title 21, Code of Federal Regulations (CFR), Parts 800 to 895. In addition, FDA may publish further announcements concerning your device in the Federal Register.

Please be advised that FDA’s issuance of a substantial equivalence determination does not mean that FDA has made a determination that your device complies with other requirements of the Act or any Federal statutes and regulations administered by other Federal agencies. You must comply with all the Act’s requirements, including, but not limited to: registration and listing (21 CFR Part 807); labeling (21 CFR Parts 801 and 809); medical device reporting (reporting of
medical device-related adverse events) (21 CFR 803); and good manufacturing practice requirements as set forth in the quality systems (QS) regulation (21 CFR Part 820). This letter will allow you to begin marketing your device as described in your Section 510(k) premarket notification. The FDA finding of substantial equivalence of your device to a legally marketed predicate device results in a classification for your device and thus, permits your device to proceed to the market.

If you desire specific advice for your device on our labeling regulation (21 CFR Parts 801 and 809), please contact the Office of In Vitro Diagnostic Device Evaluation and Safety at (301) 796-5450. Also, please note the regulation entitled, “Misbranding by reference to premarket notification” (21 CFR Part 807.97). For questions regarding the reporting of adverse events under the MDR regulation (21 CFR Part 803), please go to http://www.fda.gov/MedicalDevices/Safety/Reportaproblem/default.htm for the CDRH’s Office of Surveillance and Biometrics/Division of Postmarket Surveillance.

You may obtain other general information on your responsibilities under the Act from the Division of Small Manufacturers, International and Consumer Assistance at its toll-free number (800) 638-2041 or (301) 796-7100 or at its Internet address http://www.fda.gov/cdrh/industry/support/index.html.

Sincerely Yours,

Mary S. Pastel, Sc.D.
Director
Division of Radiological Devices
Office of In Vitro Diagnostic Device Evaluation and Safety
Center for Devices and Radiological Health

Enclosure
Indications for Use

510(k) Number (if known): K112839

Device Name: Varian High Energy Linear Accelerator

Indications for Use:

The Varian High Energy Linear Accelerator is indicated for stereotactic radiosurgery and precision radiotherapy for lesions, tumors and conditions anywhere in the body when radiation treatment is indicated.

Prescription Use _X___ AND/OR Over-The-Counter Use _____
(Part 21 CFR 801 Subpart D) (21 CFR 807 Subpart C)

(PLEASE DO NOT WRITE BELOW THIS LINE-CONTINUE ON ANOTHER PAGE IF NEEDED)
