<th>510(k) Summary – Synthes ACIS</th>
</tr>
</thead>
</table>
| **Name of Firm:** | Synthes Spine  
1302 Wrights Lane East  
West Chester, PA 19380 |
| **510(k) Contact:** | Heather Guerin, Ph.D., P.E.  
Senior Regulatory Affairs Specialist  
Telephone: 610-719-5432  
Facsimile: 610-719-5102 |
| **Date Prepared:** | January 27, 2012 |
| **Trade Name(s):** | Synthes ACIS |
| **Classification:** | 21 CFR 888.3080 – Intervertebral fusion device  
Class II (special controls)  
Orthopaedic and Rehabilitation Devices Panel (87)  
Product Code ODP (Intervertebral Fusion Device with Bone Graft, Cervical) |
| **Predicates:** | Synthes Zero-P device (K072981)  
NuVasive CoRoent System (K081611)  
BAK Cervical Interbody Fusion System (P980048)  
Medtronic Cornerstone PSR (K100214)  
Medtronic Prevail (K073285)  
Globus PATRIOT™ Spacers (Colonial™ ACDF) (K072991) |
| **Device Description(s):** | The Synthes ACIS is a radiolucent cervical intervertebral body fusion device. The Synthes ACIS is fabricated from Invibio® PEEK-Optima® LT-1 (ASTM F2026-10) with two anterior and one posterior titanium alloy (Ti-6Al-4V ELI; TAV; ASTM F136-2a) radiopaque markers. The markers allow intra-operative radiographic assessment of the position of the implant.  
The Synthes ACIS is available in a range of heights, in three different sagittal profiles. Pyramidal teeth that assist in stabilization of the construct are located on the inferior and superior surfaces of the spacers. The open architecture of the device allows it to be packed with autogenous bone graft material, i.e., autograft. |
| **Intended Use/Indications for Use:** | The Synthes ACIS is an anterior cervical interbody fusion device indicated for use in skeletally mature patients with degenerative disc disease (DDD) with accompanying radicular symptoms at one level from C2-T1. DDD is defined as discogenic pain with degeneration of the disc confirmed by history and radiographic studies. These patients should have had six weeks of non-operative treatment. The interior of the Synthes ACIS should be packed with autogenous bone graft and implanted via an anterior approach. The Synthes ACIS is intended to be used with supplemental fixation. |
| **Comparison of** | Synthes ACIS is substantially equivalent to the predicates in design,

Re: K120275
  Trade/Device Name: ACIS Spacer and Vertebral Spacer CR
  Regulation Number: 21 CFR 888.3080
  Regulation Name: Inter-vertebral body fusion device
  Regulatory Class: Class II
  Product Code: ODP
  Dated: April 24, 2012
  Received: April 26, 2012

Dear Dr. Guerin:

We have reviewed your Section 510(k) premarket notification of intent to market the device referenced above and have determined the device is substantially equivalent (for the indications for use stated in the enclosure) to legally marketed predicate devices marketed in interstate commerce prior to May 28, 1976, the enactment date of the Medical Device Amendments, or to devices that have been reclassified in accordance with the provisions of the Federal Food, Drug, and Cosmetic Act (Act) that do not require approval of a premarket approval application (PMA). You may, therefore, market the device, subject to the general controls provisions of the Act. The general controls provisions of the Act include requirements for annual registration, listing of devices, good manufacturing practice, labeling, and prohibitions against misbranding and adulteration. Please note: CDRH does not evaluate information related to contract liability warranties. We remind you, however, that device labeling must be truthful and not misleading.

If your device is classified (see above) into either class II (Special Controls) or class III (PMA), it may be subject to additional controls. Existing major regulations affecting your device can be found in the Code of Federal Regulations, Title 21, Parts 800 to 898. In addition, FDA may publish further announcements concerning your device in the Federal Register.

Please be advised that FDA’s issuance of a substantial equivalence determination does not mean that FDA has made a determination that your device complies with other requirements of the Act or any Federal statutes and regulations administered by other Federal agencies. You must comply with all the Act’s requirements, including, but not limited to: registration and listing (21 CFR Part 807); labeling (21 CFR Part 801); medical device reporting (reporting of medical device-related adverse events) (21 CFR 803); good manufacturing practice requirements as set
forth in the quality systems (QS) regulation (21 CFR Part 820); and if applicable, the electronic product radiation control provisions (Sections 531-542 of the Act); 21 CFR 1000-1050.

If you desire specific advice for your device on our labeling regulation (21 CFR Part 801), please go to http://www.fda.gov/AboutFDA/CentersOffices/CDRH/CDRHOffices/ucm115809.htm for the Center for Devices and Radiological Health’s (CDRH’s) Office of Compliance. Also, please note the regulation entitled, "Misbranding by reference to premarket notification" (21 CFR Part 807.97). For questions regarding the reporting of adverse events under the MDR regulation (21 CFR Part 803), please go to http://www.fda.gov/MedicalDevices/Safety/ReportaProblem/default.htm for the CDRH’s Office of Surveillance and Biometrics/Division of Postmarket Surveillance.

You may obtain other general information on your responsibilities under the Act from the Division of Small Manufacturers, International and Consumer Assistance at its toll-free number (800) 638-2041 or (301) 796-7100 or at its Internet address http://www.fda.gov/MedicalDevices/ResourcesforYou/Industry/default.htm.

Sincerely yours,

Mark N. Melkerson  
Director  
Division of Surgical, Orthopedic and Restorative Devices  
Office of Device Evaluation  
Center for Devices and Radiological Health

5 Indications for Use Statement

510(k) Number: K120275
(if known)

Device Name: Synthes ACIS

Indications for Use: The Synthes ACIS is an anterior cervical interbody fusion device indicated for use in skeletally mature patients with degenerative disc disease (DDD) with accompanying radicular symptoms at one level from C2-T1. DDD is defined as discogenic pain with degeneration of the disc confirmed by history and radiographic studies. These patients should have had six weeks of non-operative treatment. The interior of the spacer of the Synthes ACIS should be packed with autogenous bone graft and implanted via an anterior approach. The Synthes ACIS is intended to be used with supplemental fixation.
