510(k) Summary

510(k) summary of safety and effectiveness information for Flexitime Fast & Scan in accordance with 21 CFR 807.92.

1. **Submitter Information**

   Company Name: Heraeus Kulzer, LLC
   Company Address: 300 Heraeus Way
                    South Bend, IN 46614
   Company Phone: (574) 299-5421
   Contact Person: Jamie Mearna
   Date Summary prepared: December 28, 2011 (Revised June 29, 2012)

2. **Device Identification**

   Trade /Proprietary Name: *Flexitime Fast & Scan Impression Materials* to include
   - Flexitime Fast & Scan Light Flow
   - Flexitime Fast & Scan Medium Flow
   - Flexitime Fast & Scan Dynamix Putty
   - Flexitime Fast & Scan Easy Putty
   - Flexitime Fast & Scan Dynamix Heavy Tray

   Common Name: Material, Impression (21 CFR 872.3660)
   Classification: Class II
   FDA Code: Dental ELW

3. **Legally Market Devices to which Substantial Equivalence is claimed:**

   Heraeus Kulzer, GmbH - Flexitime Impression Material (K000629)
   Heraeus Kulzer, GmbH - Flexitime Fast & Scan Impression Material (K102770)

4. **Device Description**

   Flexitime Fast & Scan Impression Materials are addition-cross-linking polyvinyl siloxane materials. The Flexitime Fast & Scan Impression Materials family consists of Light Flow, Medium Flow, Dynamix Putty, Easy Putty and Dynamix Heavy Tray. Flexitime Light Flow, Medium Flow, Heavy Tray are delivered in 50 ml cartridges while Flexitime Fast & Scan Dynamix Putty and Dynamix Heavy Tray are delivered in 380 ml Cartridges and Flexitime Fast & Scan Easy Putty is delivered in a 300 ml container.

   The Flexitime Fast & Scan assortment is characterized by the addition of Titanium Dioxide (in order to ensure scannability) and is technically characterized by an extra-oral working time of up to 1.5 minutes and a short time in mouth of 2.0 minutes. The materials were developed to ensure hydrophilic characteristics for optimal impression
taking in the wet surroundings of the mouth combined with good mechanical properties. Also, they ensure scannability with state of the art red laser light impression scanners.

Flexitime Fast & Scan products are part of the Flexitime System.

5. Intended Use

Flexitime Fast & Scan is an addition-cross-linking polyvinyl siloxane impression material for all inlay, crown & bridges, endentulous and partial impressions.

The Flexitime Fast & Scan range of products are prepared without requiring additional surface treatment for optical scanning in dental scanners designed for scanning impression materials, such as the 3shape D700 laser scanners.

6. Technological Characteristics

The physical properties of the additional Flexitime Fast & Scan assortments: Dynamix Heavy Tray and Easy Putty are like Flexitime Fast and Scan (K102770) and Flexitime (K000629) products in the fact that they are also in compliance with ISO 4823.

The new assortment of Flexitime Fast and Scan materials (like the original Flexitime Fast & Scan K102770) can be prepared without requiring additional surface treatment for optical scanning in dental scanners designed for scanning impression materials.

7. Nonclinical Testing

In accordance with US FDA Medical Device Regulations, any medical device is required to be evaluated by the legal medical device manufacturer regarding its clinical performance and safety. This includes an evaluation of biocompatibility in accordance with FDA recognized standard, EN ISO 10993-1.

The biological compatibility of Flexitime Fast & Scan was verified in accordance with the international standards.

The biocompatibility of Flexitime Fast & Scan in the aforementioned indication was documented in a biocompatibility evaluation report and the benefit/risk relation has been judged as positive.

8. Clinical Testing

In accordance with US FDA Medical Device Regulations, any medical device is required to be evaluated by the legal medical device manufacturer regarding its clinical performance and safety. This includes a clinical evaluation, which is intended to critically evaluate the clinical benefits of the medical device in comparison to its potential risks. Therefore, any clinical evaluation is part of the compulsory risk management process according to FDA recognized standard, EN ISO 14971, and critical findings must further be considered in the current risk management process of the medical device manufacturer responsible for the evaluated device.
On this background, the clinical evaluation was performed. This critical evaluation followed
the procedures outlined in the corresponding clinical evaluation plan.

Considering the evaluated scientific data and technical results for Flextime Fast & Scan it is
concluded that the products can be expected to exhibit the claimed technical performance
and that potential undesirable clinical effects and risks seem well controlled and accepted,
when weighed against their benefit to dentistry. Therefore, a positive benefit versus risk
ratio can be stated by the experts for Flextime Fast & Scan assortment, provided that the
products are applied in accordance with the intended use as outlined in the manufacturer’s
instructions for use.

9. Summary of Conclusion

The new Flexitime Fast & Scan assortment is substantially equivalent to the original
Flexitime Fast & Scan and Flexitime. All of the products are indicated for taking impression
materials of suited techniques. In addition, the new assortment of Flexitime Fast & Scan is
scannable without prior powdering as is required with the predicate device, Flexitime Fast
and Scan.

A biocompatibility evaluation has been performed by a toxicologist for Flextime Fast & Scan,
and it was confirmed that the product meets the requirements of FDA recognized standard,
ISO 10993 Standard and it was concluded that the safety of Flexitime Fast & Scan is
equivalent to that of the predicate device.

The risk analysis was carried out for Flextime Fast & Scan and it was concluded that the
safety of the Flexitime Fast & Scan device, for the intended use, is substantially equivalent to
the predicate device. Flexitime Fast & Scan and the predicate device both have the same
indications for use, warnings and contraindications.

Re: K120914  
Trade/Device Name: Flexitime Fast & Scan  
Regulation Number: 21 CFR 872.3660  
Regulation Name: Impression Material  
Regulatory Class: II  
Product Code: ELW  
Dated: July 09, 2012  
Received: July 11, 2012

Dear Mr. Mearna:

We have reviewed your Section 510(k) premarket notification of intent to market the device referenced above and have determined the device is substantially equivalent (for the indications for use stated in the enclosure) to legally marketed predicate devices marketed in interstate commerce prior to May 28, 1976, the enactment date of the Medical Device Amendments, or to devices that have been reclassified in accordance with the provisions of the Federal Food, Drug, and Cosmetic Act (Act) that do not require approval of a premarket approval application (PMA). You may, therefore, market the device, subject to the general controls provisions of the Act. The general controls provisions of the Act include requirements for annual registration, listing of devices, good manufacturing practice, labeling, and prohibitions against misbranding and adulteration. Please note: CDRH does not evaluate information related to contract liability warranties. We remind you, however, that device labeling must be truthful and not misleading.

If your device is classified (see above) into either class II (Special Controls) or class III (PMA), it may be subject to additional controls. Existing major regulations affecting your device can be found in the Code of Federal Regulations, Title 21, Parts 800 to 898. In addition, FDA may publish further announcements concerning your device in the Federal Register.
Mr. Meamra:

Please be advised that FDA's issuance of a substantial equivalence determination does not mean that FDA has made a determination that your device complies with other requirements of the Act or any Federal statutes and regulations administered by other Federal agencies. You must comply with all the Act's requirements, including, but not limited to: registration and listing (21 CFR Part 807); labeling (21 CFR Part 801); medical device reporting (reporting of medical device-related adverse events) (21 CFR 803); good manufacturing practice requirements as set forth in the quality systems (QS) regulation (21 CFR Part 820); and if applicable, the electronic product radiation control provisions (Sections 531-542 of the Act); 21 CFR 1000-1050.

If you desire specific advice for your device on our labeling regulation (21 CFR Part 801), please go to http://www.fda.gov/AboutFDA/CentersOffices/CDRHI/CDRHOffices/ucm115809.htm for the Center for Devices and Radiological Health's (CDRH's) Office of Compliance. Also, please note the regulation entitled, "Misbranding by reference to premarket notification" (21 CFR Part 807.97). For questions regarding the reporting of adverse events under the MDR regulation (21 CFR Part 803), please go to http://www.fda.gov/MedicalDevices/Safety/ReportaProblem/default.htm for the CDRH's Office of Surveillance and Biometrics/Division of Postmarket Surveillance.

You may obtain other general information on your responsibilities under the Act from the Division of Small Manufacturers, International and Consumer Assistance at its toll-free number (800) 638-2041 or (301) 796-7100 or at its Internet address http://www.fda.gov/MedicalDevices/ResourcesforYou/Industry/default.htm.

Sincerely yours,
