510(k) Summary of Safety and Effectiveness (in accordance to 21 CFR 807.87(h))

Device Name
Proprietary Device Name: Discovery PET/CT 710 Clarity Edition
Date prepared: November 27, 2013,

Establishment Name and Registration Number of Submitter
Name: GE Medical Systems LLC
Registration Number: 2126677
Corresponding Official: David Duersteler
GE Healthcare
P.O. Box 414
Milwaukee, WI 53201
Phone: 262-312-7029
Email: david.duersteler@med.ge.com

Device Classification
Classification Code: 90 KPS
Panel Identification: Radiology
Classification Name: Emission Computed Tomography System
(Common Name: PET/CT Imaging System
(Per 21 CFR 892.1200)
Classification Class: Class II Product
Reason for 510(k) Submission: Modified device

Device Description
The Discovery™ PET/CT 710 Clarity Edition consists of a fully integrated 3D Positron Emission Tomography and multi-slice Computed Tomography scanner with all available CT diagnostic applications, except gantry tilt. Due to the overall length of the PET/CT, the patient table sits on a special base that drives the table between the PET and CT portions of the gantry. The PET/CT table is rated for a patient weight of 227 Kg (500 pounds) and the cradle travels up to 1700mm on standard systems, or up 2 meters on systems with the 2m scan range option.

Discovery™ PET/CT 710 Clarity Edition systems have a quantitation reconstruction method option called Q.Clear. This method iteratively reconstructs PET images to full convergence (Regularized Reconstruction) while maintaining acceptable image quality.

Identification of Legally Marketed Equivalent Devices
Discovery PET/CT 690 GE Medical Systems LLC K081496
Comparison with Predicate Devices
Both systems are PET/CT systems employ the same design, construction, materials, energy source, operating principles, and technology. Further, the regularized reconstruction (Q.clear) method is similar to existing iterative reconstruction methods except it is able to continue iterations to full convergence while maintaining image quality by using noise reduction.
Both systems consist of a fully integrated 3D Positron Emission Tomography and multi-slice Computed Tomography scanner with all available CT diagnostic applications, except gantry tilt. Due to the overall length of the PET/CT, the patient tables sit on a special base that drives the table between the PET and CT portions of the gantry. The PET/CT table is rated for a patient weight of 227 Kg (500 pounds) and the cradle travels up to 1700mm on standard systems, or up 2 meters on systems with the 2m scan range option.
Both systems are compliant with the same IEC, NEMA and related safety and performance standards.
Both systems use the same acquisition methods and attenuation correction methods. All major functions and features have been previously marketed, and intended uses are the same. Discovery Clarity Edition performs as well as currently marketed devices, introduces no significant change in safety or effectiveness as compared to the predicate devices, and is therefore substantially equivalent in terms of safety and effectiveness to the currently marketed GE Healthcare Discovery PET/CT 690 product.

Indications for Use of Device
GE PET/CT systems are intended for head and whole body attenuation corrected Positron Emission Tomography (PET) imaging and localization of emission activity in patient anatomy by means of integrated PET and CT images.
The systems are to be used by trained health care professionals for imaging the distribution of radiopharmaceuticals in the body for the assessment of metabolic (molecular) and physiologic functions in patients of all ages. This can assist in the evaluation, diagnosis, staging, restaging, and follow up of lesions, disease and organ function such as (but not limited to) cancer, cardiovascular disease, and brain dysfunction. These devices can also assist in radiotherapy planning.
The systems can also be used as a stand-alone head and whole body multi-slice computed tomography (CT) diagnostic imaging systems.

Conclusion
In the opinion of General Electric Medical Systems, the GE Discovery PET/CT 710 Clarity Edition system is substantially the same in design, materials, energy sources, and technology, does not introduce new safety concerns, performs as well as currently marketed devices, and is therefore substantially equivalent in terms of safety and effectiveness to the currently marketed Discovery PET/CT 690 device. (K081496).

Re: K133657
Trade/Device Name: Discovery PET/CT 710 Clarity Edition
Regulation Number: 21 CFR 892.1200
Regulation Name: Emission computed tomography
Regulatory Class: II
Product Code: KPS and JAK
Dated: March 14, 2014
Received: March 18, 2014

Dear Mr. Duersteler:

We have reviewed your Section 510(k) premarket notification of intent to market the device referenced above and have determined the device is substantially equivalent (for the indications for use stated in the enclosure) to legally marketed predicate devices marketed in interstate commerce prior to May 28, 1976, the enactment date of the Medical Device Amendments, or to devices that have been reclassified in accordance with the provisions of the Federal Food, Drug, and Cosmetic Act (Act) that do not require approval of a premarket approval application (PMA). You may, therefore, market the device, subject to the general controls provisions of the Act. The general controls provisions of the Act include requirements for annual registration, listing of devices, good manufacturing practice, labeling, and prohibitions against misbranding and adulteration. Please note: CDRH does not evaluate information related to contract liability warranties. We remind you, however, that device labeling must be truthful and not misleading.

If your device is classified (see above) into either class II (Special Controls) or class III (PMA), it may be subject to additional controls. Existing major regulations affecting your device can be found in the Code of Federal Regulations, Title 21, Parts 800 to 898. In addition, FDA may publish further announcements concerning your device in the Federal Register.

Please be advised that FDA’s issuance of a substantial equivalence determination does not mean that FDA has made a determination that your device complies with other requirements of the Act or any Federal statutes and regulations administered by other Federal agencies. You must comply with all the Act’s requirements, including, but not limited to: registration and listing (21 CFR Part 807); labeling (21 CFR Part 801); medical device reporting (reporting of medical device-related adverse events) (21 CFR 803); good manufacturing practice requirements as set forth in the quality systems (QS) regulation (21 CFR Part 820); and if applicable, the electronic product radiation control provisions (Sections 531-542 of the Act); 21 CFR 1000-1050.
If you desire specific advice for your device on our labeling regulation (21 CFR Part 801), please contact the Division of Small Manufacturers, International and Consumer Assistance at its toll-free number (800) 638-2041 or (301) 796-7100 or at its Internet address http://www.fda.gov/MedicalDevices/ResourcesforYou/Industry/default.htm. Also, please note the regulation entitled, "Misbranding by reference to premarket notification" (21 CFR Part 807.97). For questions regarding the reporting of adverse events under the MDR regulation (21 CFR Part 803), please go to http://www.fda.gov/MedicalDevices/Safety/ReportaProblem/default.htm for the CDRH's Office of Surveillance and Biometrics/Division of Postmarket Surveillance.

You may obtain other general information on your responsibilities under the Act from the Division of Small Manufacturers, International and Consumer Assistance at its toll-free number (800) 638-2041 or (301) 796-7100 or at its Internet address http://www.fda.gov/MedicalDevices/ResourcesforYou/Industry/default.htm.

Sincerely yours.
