Indications, contraindications, warnings and instructions for use can be found in the labeling supplied with each product. CAUTION: Federal (U.S.A.) law restricts these products to sale by or on the order of a physician.

REBEL™ Platinum Chromium Coronary Stent System is a product of Boston Scientific Corporation.
Coronary Artery Disease
Coronary artery disease (CAD) is the narrowing of the arteries in the heart. This narrowing can also be called atherosclerosis. It is usually caused by the build up of fat or calcium deposits called a plaque. Over time, this plaque can build to a total blockage of the artery, which is called a heart attack.

Coronary Artery Stenting
During this procedure the REBEL stent is delivered into your coronary arteries. The stent is made of a special metal called Platinum Chromium. The stent is left in the artery to keep it open and allow blood to flow through.

Clinical Data Summary
The principal safety and effectiveness for the REBEL Stent System is derived from the global OMEGA Clinical Trial, a clinical trial conducted on the OMEGA™ Stent System. The OMEGA and OMEGA stents utilize the same platinum chromium alloy. The REBEL Stent System has supplementary proximal stent connectors for increased seal strength, a short flexible stent delivery system tip, and a PTFE coated proximal segment improved for stent delivery. The stent deliverability and extension radiographic and stent deliverability testing were conducted. All the specifications between the OMEGA and REBEL Stent Systems and support documents and animal study data, the findings of the OMEGA Clinical Trial are applicable to the REBEL Stent System. The OMEGA Clinical Trial included 256 patients with planned follow-up 20 days, 30 days, 6 months, and 12 months after the procedure. The composite occurrence of death, heart attack, bypass surgery and repeat angioplasty was 0.01% for the OMEGA stent implant. These results showed that the OMEGA Stent was safe and effective as after approved bare metal coronary stents.

MEDICATIONS
Your cardiologist has prescribed a number of medications to help you heal and prevent future heart attacks. These medications include medications and blood-thinning drugs such as aspirin, clopidogrel, ticagrelor, prasugrel (Effient), or warfarin (Coumadin). It is extremely important to follow your medication regimen. You should be sure to take these medicines before being instructed to do so by your cardiologist. You can’t save the life you just saved.

Your doctor may need to change your diet to help reduce the levels of fat in your blood and lower your risk.

MORE INFORMATION
For more information about the REBEL Stent System, please go to the Stent Implant Card or call Coronary Stent Support at: 1-877-829-8741

www.stent.com or call Coronary Stent Support at: 1-877-829-8741

For questions regarding your Coronary Stent System please call your doctor or MR technologist. For patients with a REBEL Stent, MR image quality will be compromised if the area of interest is in the same area or relatively near the implantation of a REBEL Stent(s). Prior to undergoing an MRI scan, inform your doctor or MR technologist that you have a REBEL Stent. Special precautions may be required.

Can I undergo MRI or scanner testing with a stent?
If surgery or dental work is recommended which would require you to stop taking these medications permanently, you and your doctors should carefully consider the risks and benefits of any additional surgical or dental work versus the possible risk from early discontinuation of these medications.

If you need emergency procedures that discontinue these medications because of significant bleeding, then your cardiologist will be carefully monitoring you for possible complications. Once your condition has stabilized, your cardiologist will probably put you back on these medications.

Can I play sports?
If surgery or dental work is recommended which would require you to stop taking these medications permanently, you and your doctors should carefully consider the risks and benefits of any additional surgical or dental work versus the possible risk from early discontinuation of these medications.

If you need emergency procedures that discontinue these medications because of significant bleeding, then your cardiologist will be carefully monitoring you for possible complications. Once your condition has stabilized, your cardiologist will probably put you back on these medications.

What if I still have pain?
Inform your doctor or MRI technologist that you have a REBEL Stent. Special precautions may be required.

Your doctor will tell you what sports you can play and when you can start them.
