Device Description

The subject device Zimmer® Patient Specific Instruments System 6.0 is a modification to the predicate device Zimmer® Patient Specific Instruments System 4.0 (K113829) to accommodate the new compatible implant system Zimmer® Persona™ components, cleared via 510(k)s K113369, K122745 and K121771. A similar change was done for Zimmer® Patient Specific Instruments System 5.0 (K121640) where the Zimmer® Persona™ components, cleared via 510(k) K113369, were added to MRI image based system. Zimmer® Patient Specific Instruments System 6.0 is designed to assist a surgeon in the placement of total knee replacement components for Zimmer® Persona™ components. The system consists of a software device, branded as Zimmer® Patient Specific Instruments Planner (ZPSIP) and a hardware component, branded as Zimmer® Patient Specific Instruments (ZPSI).

Intended Use

Total Knee Replacement

The Zimmer® Patient Specific Instruments System is intended to be used as a surgical instrument to assist in the positioning of Total Knee Replacement components intra-operatively and in guiding the marking of bone before cutting provided that anatomic landmarks necessary for alignment and positioning of the implant are identifiable on patient imaging scans.

The Zimmer® Patient Specific Instruments System is to be used with Zimmer NexGen CR-Flex fixed bearing, Zimmer NexGen CR fixed bearing, Zimmer NexGen LPS-Flex fixed bearing, Zimmer NexGen LPS fixed bearing, Zimmer Gender Solutions Natural - Knee Flex fixed bearing, Zimmer Persona™ CR fixed bearing, Zimmer Persona™ PS fixed bearing and Zimmer Persona™ Trabecular Metal™ prostheses families only.

Unicompartmental Knee Replacement

The Zimmer® Patient Specific Instruments System is intended to be used as a surgical instrument to assist in the positioning of Unicompartmental Knee Replacement components intra-operatively and in guiding the marking of bone before cutting and to guide cutting of the bone provided that anatomic landmarks necessary for alignment and positioning of the implant are identifiable on patient imaging scans.

The Zimmer® Patient Specific Instruments System is to be used with Zimmer Unicompartmental High Flex Knee System prostheses families only.

The Zimmer® Patient Specific Instruments are intended for single use only.

Functioning of the Device

The Zimmer® Patient Specific Instruments System 6.0 generates a pre-surgical plan based on CT image data sets using the Zimmer Patient Specific Instruments Planner. The software device then is used pre-operatively by a qualified surgeon to inspect, fine-tune and approve the pre-surgical plan. Next, Zimmer Patient Specific

Materialise N.V.
Instruments are designed and manufactured based on the approved pre-surgical plan. Zimmer Patient Specific Instruments are patient specific templates which transfer the pre-operatively determined positioning of the chosen total knee replacement components to the patient intra-operatively, assisting the surgeon in positioning and aligning the actual total knee replacement components by guiding and marking drill locations.

Technological Characteristics

Device comparison showed that the subject device is substantially equivalent to the Zimmer Patient Specific Instruments System in K113829 and the Zimmer Patient Specific Instruments System in K121640 in terms of intended use, design, functionality, materials, fundamental technology and performance characteristics.

- Both subject device and predicate device are to be used as a surgical instrument to assist in the positioning of total knee replacement components intra-operatively and in guiding the marking of bone before cutting.
- The guides of the subject and predicate devices are designed and manufactured from reconstructed three-dimensional models of the patient’s anatomy.
- The guides of the subject and predicate devices are made of the same material and follow the same manufacturing process.
- The guide performance of subject and predicate device is guaranteed once the fit of the guide on the patient’s anatomy is obtained.
- The software component of the subject and predicate device are intended for use as medical device
- The software component of the subject device is the same software component of the predicate device, only updated with new implants, user interface improvements and minor functional additions.
- The software component of the subject and predicate device functions exactly the same.
- The software component of the subject and predicate device utilized the same programming language and operating system.
- The guides and software of the subject and predicate device have been developed by the same manufacturing company (Materialise NV), based on the same fundamental technology and in-house knowledge
- The guides and software of the subject and predicate device follow the same internal quality procedures and work instructions for design, development, testing and validation.

Performance Data

Results of software verification and validation testing demonstrated the device’s safety and effectiveness is substantially equivalent to the predicate device.

Summary

The characteristics that determine the functionality and performance of the subject device, the Zimmer Patient Specific Instruments System 6.0, are substantially equivalent to the devices cleared under K113829 and K121640. The Zimmer Patient Specific Instrument System will be manufactured in compliance with FDA and ISO quality system requirements.

Re: K140027
  Trade/Device Name: Zimmer Patient Specific Instruments System 6.0
  Regulation Number: 21 CFR 888.3560
  Regulation Name: Knee joint patellofemorotibial polymer/metal/polymer semi-constrained
cemented prosthesis
  Regulatory Class: Class II
  Product Code: JWH, MBH, OOG, OIY
  Dated: April 10, 2014
  Received: April 14, 2014

Dear Mr. Clemens:

We have reviewed your Section 510(k) premarket notification of intent to market the device
referenced above and have determined the device is substantially equivalent (for the indications
for use stated in the enclosure) to legally marketed predicate devices marketed in interstate
commerce prior to May 28, 1976, the enactment date of the Medical Device Amendments, or to
devices that have been reclassified in accordance with the provisions of the Federal Food, Drug,
and Cosmetic Act (Act) that do not require approval of a premarket approval application (PMA).
You may, therefore, market the device, subject to the general controls provisions of the Act. The
general controls provisions of the Act include requirements for annual registration, listing of
devices, good manufacturing practice, labeling, and prohibitions against misbranding and
adulteration. Please note: CDRH does not evaluate information related to contract liability
warranties. We remind you, however, that device labeling must be truthful and not misleading.

If your device is classified (see above) into either class II (Special Controls) or class III (PMA), it
may be subject to additional controls. Existing major regulations affecting your device can be
found in the Code of Federal Regulations, Title 21, Parts 800 to 898. In addition, FDA may
publish further announcements concerning your device in the Federal Register.

Please be advised that FDA’s issuance of a substantial equivalence determination does not mean
that FDA has made a determination that your device complies with other requirements of the Act
or any Federal statutes and regulations administered by other Federal agencies. You must
comply with all the Act’s requirements, including, but not limited to: registration and listing (21
CFR Part 807); labeling (21 CFR Part 801); medical device reporting (reporting of medical
device-related adverse events) (21 CFR 803); good manufacturing practice requirements as set
forth in the quality systems (QS) regulation (21 CFR Part 820); and if applicable, the electronic
product radiation control provisions (Sections 531-542 of the Act); 21 CFR 1000-1050.

If you desire specific advice for your device on our labeling regulation (21 CFR Part 801), please
contact the Division of Industry and Consumer Education at its toll-free number (800) 638-2041
or (301) 796-7100 or at its Internet address
http://www.fda.gov/MedicalDevices/ResourcesforYou/Industry/default.htm. Also, please note
the regulation entitled, "Misbranding by reference to premarket notification" (21 CFR Part
807.97). For questions regarding the reporting of adverse events under the MDR regulation (21
CFR Part 803), please go to
http://www.fda.gov/MedicalDevices/Safety/ReportaProblem/default.htm for the CDRH’s Office
of Surveillance and Biometrics/Division of Postmarket Surveillance.

You may obtain other general information on your responsibilities under the Act from the
Division of Industry and Consumer Education at its toll-free number (800) 638-2041 or (301)
796-7100 or at its Internet address

Sincerely yours,

Lori A. Wiggins

Indications for Use

510(k) Number (if known): K140027

Device Name: Zimmer Patient Specific Instruments System 6.0 (Zimmer Patient Specific Instruments Planner, Zimmer Patient Specific Instruments)

Indications for Use:

Total Knee Replacement
The Zimmer® Patient Specific Instruments System is intended to be used as a surgical instrument to assist in the positioning of Total Knee Replacement components intra-operatively and in guiding the marking of bone before cutting provided that anatomic landmarks necessary for alignment and positioning of the implant are identifiable on patient imaging scans.

The Zimmer® Patient Specific Instruments System is to be used with Zimmer NexGen CR-Flex fixed bearing, Zimmer NexGen CR fixed bearing, Zimmer NexGen LPS-Flex fixed bearing, Zimmer NexGen LPS fixed bearing, Zimmer Gender Solutions Natural – Knee Flex fixed bearing, Zimmer Persona™ CR fixed bearing, Zimmer Persona™ PS fixed bearing and Zimmer Persona™ Trabecular Metal™ prostheses families only.

Unicompartmental Knee Replacement
The Zimmer® Patient Specific Instruments System is intended to be used as a surgical instrument to assist in the positioning of Unicompartmental Knee Replacement components intra-operatively and in guiding the marking of bone before cutting and to guide cutting of the bone provided that anatomic landmarks necessary for alignment and positioning of the implant are identifiable on patient imaging scans.

The Zimmer® Patient Specific Instruments System is to be used with Zimmer Unicompartmental High Flex Knee System prostheses families only.

The Zimmer® Patient Specific Instruments are intended for single use only.
