Date Prepared
June 26, 2014

Proprietary Name
Vessix™ Guide Sheath

Common Name
Guide Sheath

Product Code
DYE

Classification
Class II, 21 CFR Part 870.1340

Predicate Device
Terumo Destination Renal Guiding Sheath K081045 May 28, 2008

Device Description
Vessix™ Guide Sheath is a 7F guide sheath designed to perform as an introducer sheath and guide catheter for the introduction of interventional and diagnostic devices through the vasculature to the renal arteries. The Vessix Guide Sheath has been optimized for torque to allow access to both renal arteries during procedures. The guide sheath has an effective length of 45 cm and is available in two curve shapes: RDC (renal double curve) and LIMA (left internal mammary artery).

The guide sheath has a braided shaft design to maximize torque response, and a pre-formed tip shape (either RDC or LIMA) to enable access. It is equipped with a Tuohy-Borst valve (hemostatic valve) to prevent bleeding and a sidearm with a three-way stopcock to allow for flushing and introduction of contrast media. It is also packaged with a dilator to help with delivery over a guidewire. The guide sheath can accommodate guidewires with diameters less than or equal to 0.038 in (0.97 mm). The distal 15 cm of the outer surface of the guide sheath has a hydrophilic coating (Bioslide™). The distal tip is radiopaque to help with placement.

A polycarbonate hub is adhesively bonded to the proximal section of the guide sheath. It incorporates a luer fitting which serves as a junction to the hemostatic valve.

Intended Use / Indications for Use
The Vessix™ Guide Sheath is designed to be used for the introduction of interventional and diagnostic devices through the vasculature to the renal arteries.
Comparison of Technological Characteristics

The Vessix™ Guide Sheath incorporates substantially equivalent device materials and design, packaging materials and design, fundamental technology, manufacturing processes, sterilization process and intended use as those featured in the Terumo Destination Renal Guiding Sheath K081045 cleared May 28, 2008. Similarities and differences in technological characteristics between the predicate and subject device are listed below.

Similarities:
- Polymer material construction
- PTFE inner liner material
- Hydrophilic coating
- Sheath dimensions and shapes
- Dilator and Tuohy-Borst valve accessories
- Ethylene Oxide sterilization
- Packaging design with same function

Differences:
- Radiopaque extrusion (Vessix) versus radiopaque marker (predicate) for visibility
- Stainless steel braid (Vessix) versus stainless steel coil (predicate) to provide wall support

Performance Data

The Vessix™ Guide Sheath was subjected to testing according to the requirements of Guidance for Industry and FDA Staff – Class II Special Controls for Certain Percutaneous Transluminal Coronary Angioplasty (PTCA) Catheters, September 8, 2010. Bench testing and biocompatibility testing were performed to support a determination of substantial equivalence. The results of these tests provide reasonable assurance that the proposed device has been designed and tested to assure conformance to the requirements for its intended use. No new safety or performance issues were raised during the testing and, therefore, this device may be considered substantially equivalent to the predicate device.

The following biocompatibility and chemical characterization tests were completed on the Vessix™ Guide Sheath and its accessories:

- Cytotoxicity
- Sensitization
- Intracutaneous Reactivity
- Acute Systemic Toxicity
- Materials Mediated Pyrogenicity
- Hemolysis (Direct Contact)
- Hemolysis (Extract Method)
- Partial Thromboplastin Time
- In Vitro Hemocompatibility
- Complement Activation
- In Vivo Thromboresistance*
- USP <661> Physicochemical

*This test was performed only on the Dilator accessory.
The following in-vitro performance tests were completed on the Vessix™ Guide Sheath:

**Conclusion**

Based on the indications for use, technological characteristics, and safety and performance testing, the Vessix™ Guide Sheath has been shown to be appropriate for its intended use and is considered to be substantially equivalent to the Terumo Destination Renal Guiding Sheath.

Re: K140641
Trade/Device Name: Vessix™ Guide Sheath
Regulation Number: 21 CFR 870.1340
Regulation Name: Catheter Introducer
Regulatory Class: Class II
Product Code: DYB
Dated: June 5, 2014
Received: June 6, 2014

Dear Mr. Hunsberger:

We have reviewed your Section 510(k) premarket notification of intent to market the device referenced above and have determined the device is substantially equivalent (for the indications for use stated in the enclosure) to legally marketed predicate devices marketed in interstate commerce prior to May 28, 1976, the enactment date of the Medical Device Amendments, or to devices that have been reclassified in accordance with the provisions of the Federal Food, Drug, and Cosmetic Act (Act) that do not require approval of a premarket approval application (PMA).

You may, therefore, market the device, subject to the general controls provisions of the Act. The general controls provisions of the Act include requirements for annual registration, listing of devices, good manufacturing practice, labeling, and prohibitions against misbranding and adulteration. Please note: CDRH does not evaluate information related to contract liability warranties. We remind you, however, that device labeling must be truthful and not misleading.

If your device is classified (see above) into either class II (Special Controls) or class III (PMA), it may be subject to additional controls. Existing major regulations affecting your device can be found in the Code of Federal Regulations, Title 21, Parts 800 to 898. In addition, FDA may publish further announcements concerning your device in the Federal Register.

Please be advised that FDA’s issuance of a substantial equivalence determination does not mean that FDA has made a determination that your device complies with other requirements of the Act or any Federal statutes and regulations administered by other Federal agencies. You must comply with all the Act’s requirements, including, but not limited to: registration and listing (21 CFR Part 807); labeling (21 CFR Part 801); medical device reporting (reporting of medical device-related adverse events) (21 CFR 803); good manufacturing practice requirements as set forth in the quality systems (QS) regulation (21 CFR Part 820); and if applicable, the electronic product radiation control provisions (Sections 531-542 of the Act); 21 CFR 1000-1050.
If you desire specific advice for your device on our labeling regulation (21 CFR Part 801), please contact the Division of Industry and Consumer Education at its toll-free number (800) 638-2041 or (301) 796-7100 or at its Internet address http://www.fda.gov/MedicalDevices/ResourcesforYou/Industry/default.htm. Also, please note the regulation entitled, "Misbranding by reference to premarket notification" (21CFR Part 807.97). For questions regarding the reporting of adverse events under the MDR regulation (21 CFR Part 803), please go to http://www.fda.gov/MedicalDevices/Safety/ReportaProblem/default.htm for the CDRH’s Office of Surveillance and Biometrics/Division of Postmarket Surveillance.

You may obtain other general information on your responsibilities under the Act from the Division of Industry and Consumer Education at its toll-free number (800) 638-2041 or (301) 796-7100 or at its Internet address http://www.fda.gov/MedicalDevices/ResourcesforYou/Industry/default.htm.

Sincerely yours,
