Dear Kalyna Snylyk:

We have reviewed your Section 510(k) premarket notification of intent to market the device referenced above and have determined the device is substantially equivalent (for the indications for use stated in the enclosure) to legally marketed predicate devices marketed in interstate commerce prior to May 28, 1976, the enactment date of the Medical Device Amendments, or to devices that have been reclassified in accordance with the provisions of the Federal Food, Drug, and Cosmetic Act (Act) that do not require approval of a premarket approval application (PMA). You may, therefore, market the device, subject to the general controls provisions of the Act. The general controls provisions of the Act include requirements for annual registration, listing of devices, good manufacturing practice, labeling, and prohibitions against misbranding and adulteration. Please note: CDRH does not evaluate information related to contract liability warranties. We remind you, however, that device labeling must be truthful and not misleading.

If your device is classified (see above) into either class II (Special Controls) or class III (PMA), it may be subject to additional controls. Existing major regulations affecting your device can be found in the Code of Federal Regulations, Title 21, Parts 800 to 898. In addition, FDA may publish further announcements concerning your device in the Federal Register.

Please be advised that FDA’s issuance of a substantial equivalence determination does not mean that FDA has made a determination that your device complies with other requirements of the Act or any Federal statutes and regulations administered by other Federal agencies. You must comply with all the Act’s requirements, including, but not limited to: registration and listing (21 CFR Part 807); labeling (21 CFR Parts 801 and 809); medical device reporting (reporting of medical device-related adverse events) (21 CFR 803); good manufacturing practice requirements as set forth in the quality systems (QS) regulation (21 CFR Part 820); and if applicable, the electronic product radiation control provisions (Sections 531-542 of the Act); 21 CFR 1000-1050.
If you desire specific advice for your device on our labeling regulations (21 CFR Parts 801 and 809), please contact the Division of Industry and Consumer Education at its toll-free number (800) 638 2041 or (301) 796-7100 or at its Internet address

You may obtain other general information on your responsibilities under the Act from the Division of Industry and Consumer Education at its toll-free number (800) 638-2041 or (301) 796-7100 or at its Internet address [http://www.fda.gov/MedicalDevices/ResourcesforYou/Industry/default.htm](http://www.fda.gov/MedicalDevices/ResourcesforYou/Industry/default.htm).

Sincerely yours,

Katherine Serrano -S

Indications for Use

510(k) Number (if known)

k152117

Device Name
Dropper hsCRP High Sensivity CRP Control

Indications for Use (Describe)
The Quantimetrix Dropper hsCRP High Sensitivity CRP Control is intended for the quality control of laboratory testing procedures of high sensitivity C-Reactive protein (CRP). It is intended for professional in vitro diagnostic use only.

Type of Use (Select one or both, as applicable)

☑ Prescription Use (Part 21 CFR 801 Subpart D) ☐ Over-The-Counter Use (21 CFR 801 Subpart C)

510(k) Summary
Dropper® hsCRP High Sensitivity CRP Control

Submitter:
Quantimetrix Corporation
2005 Manhattan Beach Blvd.
Redondo Beach, CA  90278

Contact person:
Kalyna Snylyk
Director Regulatory Affairs and Quality Assurance
Telephone:  (310) 536-0006
Fax:   (310) 536-9977

Date Summary prepared:
April 15, 2016

Regulatory Information:
Product Trade name:  Dropper® hsCRP High Sensitivity CRP Control
Common name: Assayed CRP Control
Review Panel: Clinical Chemistry
Classifications: Class I, reserved
Product code: JJX
Regulation number: 21 CFR 862.1660

Device to which substantial equivalence is claimed
Liquicheck Cardiac Markers Plus Control LT
Bio-Rad Laboratories
Irvine, CA 92618-2017

510(k) number  K123663

Indications For Use
The Quantimetrix  Dropper® hsCRP High Sensitivity CRP Control is intended for the quality control of laboratory testing procedures of high sensitivity C-Reactive protein (CRP). It is intended for prescription in vitro diagnostic use only.
Description of Device
The Dropper® hsCRP Control is a ready-to-use liquid control that does not require reconstitution nor frozen storage. The product is supplied in three clinically significant levels filled to 1mL in convenient plastic dropper bottles. The controls are formulated in a human serum derived matrix fortified with preservatives and stabilizers to maintain product integrity and inhibit microbial growth. Each control level is formulated with human CRP antigen to clinically significant targets that are ideal to monitor high sensitivity CRP test methods.

The blood donor units comprising the serum pool serum are screened for HBs and HBe antigen, HCV, HIV1, and HIV2, and found to be nonreactive by US FDA accepted methods.

Value Assignment
The value assignment testing is performed by submitting samples of a specific lot to be tested to multiple laboratories and Quantimetrix laboratory to be tested across different analyzer platforms. Expected values are established from interlaboratory and intralaboratory data using instrument manufacturer’s reagents. Data derived from replicate analyses and are specific to each lot of product. Individual laboratory means should fall within the ranges listed. Value assignment ranges are established based on evaluation of data, calculating a mean value and applying a +/- 3SD range around the mean value. These values should be used as a guide in evaluating the performance of test methods. Each laboratory should establish its own ranges and specifications for the methods used to measure hsCRP. Variations from the published insert values may occur due to laboratory technique, changes in instrumentation and reagents, or to manufacturer’s test methods.

Intended use
The Quantimetrix Dropper® hsCRP Control is an assayed quality control material used to monitor the performance of high sensitivity C-Reactive Protein (CRP) test methods.

Comparison of the New Device with the Predicate Device
The Dropper hsCRP Control claims substantial equivalence to the Liquicheck Cardiac markers Plus LT Control currently in commercial distribution (K123663). Table 1 (below) contains comparison information of similarities and differences between the new and predicate device to which substantial equivalence is claimed.
Table 1: Similarities and Differences between new and predicate device:

Statement of Supporting Data:

Accelerated stability studies were conducted to establish the open and unopened stability claims. Accelerated stability studies were conducted to establish the shelf-life stability claim. Acceptance criteria were met to support the product claims as follows:

Open vial Stability: 90 days at 2 to 8°C
Open vial stability: 30 days at room temp. (18-25°C)
Shelf life Stability: 36 months at 2 to 8°C

Real time stability studies are ongoing and performed for every lot.

Conclusion:

Based on the performance characteristics indicated above, the Dropper hsCRP High Sensitivity CRP Control is substantially equivalent to the predicate device Liquicheck Cardiac Markers Plus Control LT reference 510(k) K123663

All supporting data is retained on file at Quantimetrix Corporation.
