Re: K173138

Trade/Device Name: Biim™ Diagnostic Ultrasound System
Regulation Number: 21 CFR 892.1560
Regulation Name: Ultrasonic pulsed echo imaging system
Regulatory Class: II
Product Code: IYO, ITX, LLZ
Dated: September 27, 2017
Received: September 29, 2017

Dear Mr. Job:

We have reviewed your Section 510(k) premarket notification of intent to market the device referenced above and have determined the device is substantially equivalent (for the indications for use stated in the enclosure) to legally marketed predicate devices marketed in interstate commerce prior to May 28, 1976, the enactment date of the Medical Device Amendments, or to devices that have been reclassified in accordance with the provisions of the Federal Food, Drug, and Cosmetic Act (Act) that do not require approval of a premarket approval application (PMA). You may, therefore, market the device, subject to the general controls provisions of the Act. The general controls provisions of the Act include requirements for annual registration, listing of devices, good manufacturing practice, labeling, and prohibitions against misbranding and adulteration. Please note: CDRH does not evaluate information related to contract liability warranties. We remind you, however, that device labeling must be truthful and not misleading.

If your device is classified (see above) into either class II (Special Controls) or class III (PMA), it may be subject to additional controls. Existing major regulations affecting your device can be found in the Code of Federal Regulations, Title 21, Parts 800 to 898. In addition, FDA may publish further announcements concerning your device in the Federal Register.

Please be advised that FDA’s issuance of a substantial equivalence determination does not mean that FDA has made a determination that your device complies with other requirements of the Act or any Federal statutes and regulations administered by other Federal agencies. You must comply with all the Act’s requirements, including, but not limited to: registration and listing (21 CFR Part 807); labeling (21 CFR Part 801); medical device reporting (reporting of medical device-related adverse events) (21 CFR 803); good manufacturing practice requirements as set forth in the quality systems (QS) regulation (21 CFR Part 820); and if applicable, the electronic product radiation control provisions (Sections 531-542 of the Act); 21 CFR 1000-1050.
If you desire specific advice for your device on our labeling regulation (21 CFR Part 801), please contact the Division of Industry and Consumer Education at its toll-free number (800) 638 2041 or (301) 796-7100 or at its Internet address http://www.fda.gov/MedicalDevices/ResourcesforYou/Industry/default.htm. Also, please note the regulation entitled, “Misbranding by reference to premarket notification” (21 CFR Part 807.97). For questions regarding the reporting of adverse events under the MDR regulation (21 CFR Part 803), please go to http://www.fda.gov/MedicalDevices/Safety/ReportaProblem/default.htm for the CDRH’s Office of Surveillance and Biometrics/Division of Postmarket Surveillance.

You may obtain other general information on your responsibilities under the Act from the Division of Industry and Consumer Education at its toll-free number (800) 638-2041 or (301) 796-7100 or at its Internet address http://www.fda.gov/MedicalDevices/ResourcesforYou/Industry/default.htm.

Sincerely,

Robert Ochs, Ph.D.
Director
Division of Radiological Health
Office of In Vitro Diagnostics and Radiological Health
Center for Devices and Radiological Health

Indications for Use

510(k) Number *(if known)*
K173138

Device Name
Biim™ Diagnostic Ultrasound System

Indications for Use *(Describe)*
The Biim™ Diagnostic Ultrasound System is intended for diagnostic ultrasound imaging of the human body. Specific clinical applications include:

- Musculo-skeletal (conventional and superficial)
- Needle guidance
- Pediatric
- Peripheral Vessel
- Small Organ (breast, thyroid, parathyroid, testicles)

Type of Use *(Select one or both, as applicable)*

- [X] Prescription Use (Part 21 CFR 801 Subpart D)
- [ ] Over-The-Counter Use (21 CFR 801 Subpart C)

CONTINUE ON A SEPARATE PAGE IF NEEDED.

This section applies only to requirements of the Paperwork Reduction Act of 1995.

*DO NOT SEND YOUR COMPLETED FORM TO THE PRA STAFF EMAIL ADDRESS BELOW.*

The burden time for this collection of information is estimated to average 79 hours per response, including the time to review instructions, search existing data sources, gather and maintain the data needed and complete and review the collection of information. Send comments regarding this burden estimate or any other aspect of this information collection, including suggestions for reducing this burden, to:

Department of Health and Human Services  
Food and Drug Administration  
Office of Chief Information Officer  
Paperwork Reduction Act (PRA) Staff  
PRASTAFF@fda.hhs.gov

*An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB number.*

Prescription Use (Per 21 CFR 801.109)  
N= new indication; P= previously cleared by FDA; E= added under Appendix E

### Additional Comments:

*Examples of other modes of operation may include: A-mode, Amplitude Doppler, 3-D Imaging, Harmonic Imaging, Tissue Motion Doppler, and Color Velocity Imaging

1. Supported transducer models are: Biim L12-4 Linear Array Transducer See the corresponding table.
2. Includes imaging to assist in the placement of needles and catheters in vascular or other anatomical structures and imaging guidance for nerve block procedures.

                      Narvik, Norway 8516 |
| **Contact Person:** | Christopher Hartzog  
                      CHRQ Consulting, LLC |
| **Telephone:**      | 425.954.6312 |
| **FR Numbers/Product Codes:** | 892.1560/IYO, Ultrasonic Pulsed Echo Imaging System  
                               892.1570/ITX, Diagnostic Ultrasound Transducer |
| **Common Name:**    | Diagnostic Ultrasound System with Accessories |
| **Trade Name:**     | Biim™ Diagnostic Ultrasound System |
| **Regulatory Class:** | Class II |
| **Classification Panel:** | Radiology |
| **Predicate Device:** | (K163138) Clarius Mobile Health Corp., Clarius Ultrasound System (Primary Predicate)  
                         (K162549) Philips Healthcare, Inc. Lumify Diagnostic Ultrasound System (Reference Device) |
| **Intended Use/Indications For Use:** | The Biim Ultrasound System is intended for diagnostic ultrasound imaging of the human body. Specific clinical applications include:  
  • Musculo-skeletal (conventional and superficial)  
  • Needle guidance  
  • Pediatric  
  • Peripheral Vessel  
  • Small Organ (breast, thyroid, parathyroid, testicles) |
| Device Description: | The Biim Diagnostic Ultrasound System is a portable, general-purpose, software-controlled sonography system based on a digital architecture used to acquire and display high-resolution, real-time ultrasound data through a commercial off-the-shelf iOS or Android device. The Biim Diagnostic Ultrasound System supports wireless transducer connectivity of the ultrasound images to the display device.

The Biim Diagnostic Ultrasound System consists of:
- A commercial off-the-shelf iOS or Android display device
- Biim Ultrasound software running as an app on the display device
- The wireless Biim linear array transducer with Biim Ultrasound firmware.
- Lithium-ion rechargeable battery
- Battery charger |

| Comparison of the Design and Technological Characteristics | The Biim Diagnostic Ultrasound System has similar indications for use, construction, manufacturing materials, operating principals and specifications as the predicate device.

The Biim Diagnostic Ultrasound System is similar to the Clarius Ultrasound System in that it is also a portable, general-purpose, software-controlled, diagnostic ultrasound system used to acquire and display high-resolution, real-time ultrasound data through a commercial off-the-shelf (COTS) iOS or Android display device. Comparable to the Clarius Ultrasound System, the Biim Diagnostic Ultrasound System employs wireless transducers employing Wi-Fi-based technology to communicate with tablet devices. This allows the user to export ultrasound images and display them upon Apple iOS or Android portable personal devices.

The principle difference between the Biim Diagnostic Ultrasound System and its predicate Clarius device is that the Biim Diagnostic Ultrasound System includes DICOM 3.0 storage and echo service class user features while the Clarius device does not.

The Philips Lumify device is provided as a reference device due to its comparable technology to the Biim Diagnostic Ultrasound System specifically its use of DICOM 3.0 services and an L12-4 linear array transducer.

A comparison of the clinical, design and technological characteristics of the Biim Diagnostic Ultrasound System to the currently marketed, primary predicate device and reference device is provided in Table 1 and Table 2 below. |

### Determination of Substantial Equivalence

They Biim Diagnostic Ultrasound System is a Track 3 system that employs the same fundamental scientific technology as that cleared with the Clarius Ultrasound System (K163138). All indications for use introduced by Biim Ultrasound are indications used by the predicate device.

### Summary of Non-Clinical Tests:

The Biim Diagnostic Ultrasound System has been found to conform to the system specifications, thermal, electrical, electromagnetic and mechanical safety, and to FDA consensus, medical device safety standards, and international harmonized standards. The Biim Diagnostic Ultrasound System and its applications comply with the following standards:

3. IEC 60601-2-37 Medical electrical equipment - Part 2-37: Particular requirements for the basic safety and essential performance of ultrasonic medical diagnostic and monitoring equipment

The following quality assurance measures were applied to the development of the system:

- Risk Analysis
- Requirements Reviews
- Design Reviews
- Testing on unit level (Module verification)
- Integration testing (System verification)
- Final Acceptance Testing (Validation)
- Performance testing (Verification)
- Safety testing (Verification)
- Usability validation

Patient contact materials are biocompatible.

---

**Summary of Clinical Tests**

The Biim Diagnostic Ultrasound System introduces no new indications for use, modes, features, or technologies as compared to the currently marketed and predicate device that require clinical testing. The clinical safety and effectiveness of ultrasound systems with these characteristics are well accepted for both the currently marketed predicate and subject device.

**Conclusions:**

The Biim Diagnostic Ultrasound System has similar indications for use, construction, manufacturing materials, operating principals and specifications as the predicate device. Therefore, Biim Ultrasound AS considers the Biim Diagnostic Ultrasound System substantially equivalent to the predicate device.

**514 Performance Standards:**

There are no Sec. 514 performance standards for this device.

**Prescription Status:**

This is a prescription device. The prescription device statement appears in the labeling.

**Sterilization Sites:**

Not applicable. No components supplied sterile.

**Track:**

This is a Track 3 device.
