Dear Bill Jacqmein:

We have reviewed your Section 510(k) premarket notification of intent to market the device referenced above and have determined the device is substantially equivalent (for the indications for use stated in the enclosure) to legally marketed predicate devices marketed in interstate commerce prior to May 28, 1976, the enactment date of the Medical Device Amendments, or to devices that have been reclassified in accordance with the provisions of the Federal Food, Drug, and Cosmetic Act (Act) that do not require approval of a premarket approval application (PMA). You may, therefore, market the device, subject to the general controls provisions of the Act. Although this letter refers to your product as a device, please be aware that some cleared products may instead be combination products. The 510(k) Premarket Notification Database located at https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfpmn/pmn.cfm identifies combination product submissions. The general controls provisions of the Act include requirements for annual registration, listing of devices, good manufacturing practice, labeling, and prohibitions against misbranding and adulteration. Please note: CDRH does not evaluate information related to contract liability warranties. We remind you, however, that device labeling must be truthful and not misleading.

If your device is classified (see above) into either class II (Special Controls) or class III (PMA), it may be subject to additional controls. Existing major regulations affecting your device can be found in the Code of Federal Regulations, Title 21, Parts 800 to 898. In addition, FDA may publish further announcements concerning your device in the Federal Register.
Please be advised that FDA's issuance of a substantial equivalence determination does not mean that FDA has made a determination that your device complies with other requirements of the Act or any Federal statutes and regulations administered by other Federal agencies. You must comply with all the Act's requirements, including, but not limited to: registration and listing (21 CFR Part 807); labeling (21 CFR Part 801); medical device reporting (reporting of medical device-related adverse events) (21 CFR 803) for devices or postmarketing safety reporting (21 CFR 4, Subpart B) for combination products (see https://www.fda.gov/CombinationProducts/GuidanceRegulatoryInformation/ucm597488.htm); good manufacturing practice requirements as set forth in the quality systems (QS) regulation (21 CFR Part 820) for devices or current good manufacturing practices (21 CFR 4, Subpart A) for combination products; and, if applicable, the electronic product radiation control provisions (Sections 531-542 of the Act); 21 CFR 1000-1050.

Also, please note the regulation entitled, "Misbranding by reference to premarket notification" (21 CFR Part 807.97). For questions regarding the reporting of adverse events under the MDR regulation (21 CFR Part 803), please go to http://www.fda.gov/MedicalDevices/Safety/ReportaProblem/default.htm.

For comprehensive regulatory information about medical devices and radiation-emitting products, including information about labeling regulations, please see Device Advice (https://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/) and CDRH Learn (http://www.fda.gov/Training/CDRHLearn). Additionally, you may contact the Division of Industry and Consumer Education (DICE) to ask a question about a specific regulatory topic. See the DICE website (http://www.fda.gov/DICE) for more information or contact DICE by email (DICE@fda.hhs.gov) or phone (1-800-638-2041 or 301-796-7100).

Sincerely,

Mary S. Runner -S3

Indications for Use

(Describe)

The Orchestrate 3D Orthodontic Software is indicated for use as a front-end software tool for management of orthodontic models, systematic inspection, detailed analysis, treatment simulation and virtual appliance design options, including dental casts, which may be used for sequential aligner trays or retainers. These applications are based on 3D models of the patient’s dentition before the start of an orthodontic treatment.

It can also be applied during the treatment to inspect and analyze the progress of the treatment. It can be used at the end of the treatment to evaluate if the outcome is consistent with the planned/desired treatment objectives.

The use of the Orchestrate 3D requires the user to have the necessary training and domain knowledge in the practice of orthodontics, as well as to have received a dedicated training in the use of the software.

Type of Use (Select one or both, as applicable)

- [x] Prescription Use (Part 21 CFR 801 Subpart D)
- [ ] Over-The-Counter Use (21 CFR 801 Subpart C)

CONTINUE ON A SEPARATE PAGE IF NEEDED.

This section applies only to requirements of the Paperwork Reduction Act of 1995.

Date Prepared: October 17, 2018

Proprietary Name: Orchestrate 3D Orthodontic Software

Common Name: Orthodontic Plastic Brackets (Software)

Device Classification: Class II, 21 CFR 872.5470

Primary Predicate Devices: 3Shape Ortho System (K171634)

Device Description:
The Orchestrate 3D Orthodontic Software is an orthodontic appliance design and treatment simulation software. This software is for use by Dental professionals to diagnose and design solutions for patients. Digital scans (3D) of a patient denture can be loaded into the software and the dental professional can then create treatment plans for each individual patient and their needs. The system can be used to fabricate dental casts using standard stereolithographic (STL) files for use in 3D printers. Dental casts printed can then be used to manufacture sequential aligner trays and retainers.
Indications for Use:

The Orchestrate 3D Orthodontic Software is indicated for use as a front-end software tool for management of orthodontic models, systematic inspection, detailed analysis, treatment simulation and virtual appliance design options, including dental casts, which may be used for sequential aligner trays or retainers. These applications are based on 3D models of the patient’s dentition before the start of an orthodontic treatment. It can also be applied during the treatment to inspect and analyze the progress of the treatment. It can be used at the end of the treatment to evaluate if the outcome is consistent with the planned/desired treatment objectives.

The use of the Orchestrate 3D requires the user to have the necessary training and domain knowledge in the practice of orthodontics, as well as to have received a dedicated training in the use of the software.

Comparison to Predicate Devices:

Orchestrate 3D Orthodontic Software is functionally equivalent to the following predicate device: 3Shape Ortho System (K171634) cleared January 17th, 2018).

The following table demonstrates the functional specifications of Orchestrate 3D Orthodontic Software are substantially equivalent to the predicate devices.

**Comparison of Indications for Use to Predicate Devices:**

Based on the above comparison, the indications for use of the Orchestrate 3D Orthodontic Software is similar to that of the 3Shape Software. Therefore, the Orchestrate 3D Orthodontic Software can be considered substantially equivalent to its predicate device.

**Comparison of Technological Features to Predicate Devices:**

Based on the above comparison, the design, construction, and performance characteristics of the
Orchestrate 3D Orthodontic Software is similar to that of 3Shape Software. Therefore, the Orchestrate 3D Orthodontic Software can be considered substantially equivalent to its predicate devices.

**Summary of Performance Data and Substantial Equivalence:**

Utilizing FDA Guidance document “Guidance for the Content of Premarket Submissions for Software Contained in Medical Devices” (issued May 11, 2015), the Orchestrate 3D Orthodontic Software underwent appropriate integration, verification, and validation testing. The software passed the testing and performed per its intended use.

**Conclusion:**

Based on comparison of indications for use, technological features, performance testing, and software validation testing, the Orchestrate 3D Orthodontic Software have been shown to be appropriate for its indications for use and is substantially equivalent to the legally marketed predicate device.
