Re: K183433
Trade/Device Name: FUJIFILM Ultrasonic Endoscopes EG-580UT and EG-580UR
Regulation Number: 21 CFR 876.1500
Regulation Name: Endoscope and Accessories
Regulatory Class: II
Product Code: ODG, ITX, FDS
Dated: July 26, 2019
Received: July 29, 2019

Dear Jeffrey Wan:

We have reviewed your Section 510(k) premarket notification of intent to market the device referenced above and have determined the device is substantially equivalent (for the indications for use stated in the enclosure) to legally marketed predicate devices marketed in interstate commerce prior to May 28, 1976, the enactment date of the Medical Device Amendments, or to devices that have been reclassified in accordance with the provisions of the Federal Food, Drug, and Cosmetic Act (Act) that do not require approval of a premarket approval application (PMA). You may, therefore, market the device, subject to the general controls provisions of the Act. Although this letter refers to your product as a device, please be aware that some cleared products may instead be combination products. The 510(k) Premarket Notification Database located at https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfpmm/pmn.cfm identifies combination product submissions. The general controls provisions of the Act include requirements for annual registration, listing of devices, good manufacturing practice, labeling, and prohibitions against misbranding and adulteration. Please note: CDRH does not evaluate information related to contract liability warranties. We remind you, however, that device labeling must be truthful and not misleading.

If your device is classified (see above) into either class II (Special Controls) or class III (PMA), it may be subject to additional controls. Existing major regulations affecting your device can be found in the Code of Federal Regulations, Title 21, Parts 800 to 898. In addition, FDA may publish further announcements concerning your device in the Federal Register.
Please be advised that FDA's issuance of a substantial equivalence determination does not mean that FDA has made a determination that your device complies with other requirements of the Act or any Federal statutes and regulations administered by other Federal agencies. You must comply with all the Act's requirements, including, but not limited to: registration and listing (21 CFR Part 807); labeling (21 CFR Part 801); medical device reporting (reporting of medical device-related adverse events) (21 CFR 803) for devices or postmarketing safety reporting (21 CFR 4, Subpart B) for combination products (see https://www.fda.gov/comparison-products/guidance-regulatory-information/postmarketing-safety-reporting-combination-products); good manufacturing practice requirements as set forth in the quality systems (QS) regulation (21 CFR Part 820) for devices or current good manufacturing practices (21 CFR 4, Subpart A) for combination products; and, if applicable, the electronic product radiation control provisions (Sections 531-542 of the Act); 21 CFR 1000-1050.

For comprehensive regulatory information about medical devices and radiation-emitting products, including information about labeling regulations, please see Device Advice (https://www.fda.gov/medical-devices/device-advice-comprehensive-regulatory-assistance) and CDRH Learn (https://www.fda.gov/training-and-continuing-education/cdrh-learn). Additionally, you may contact the Division of Industry and Consumer Education (DICE) to ask a question about a specific regulatory topic. See the DICE website (https://www.fda.gov/medical-devices/device-advice-comprehensive-regulatory-assistance/contact-us-division-industry-and-consumer-education-dice) for more information or contact DICE by email (DICE@fda.hhs.gov) or phone (1-800-638-2041 or 301-796-7100).

Sincerely,

Mark J. Antonino -S

Indications for Use

FUJIFILM Ultrasonic Endoscopes EG-580UT and EG-580UR are intended to provide ultrasonic images of submucosal and peripheral organs of the upper gastrointestinal tract for observation, diagnosis, and endoscopic treatment. These products are intended to be used with a FUJIFILM ultrasonic processor. These products are not intended for use on children and infants.

Type of Use (Select one or both, as applicable)

☑ Prescription Use (Part 21 CFR 801 Subpart D)  ☐ Over-The-Counter Use (21 CFR 801 Subpart C)

CONTINUE ON A SEPARATE PAGE IF NEEDED.

Predicate Devices:

- FUJIFILM Ultrasonic Endoscopes EG-530UT2 and EG-530UR2 (K181763)

Reference Devices:

- FUJIFILM Endoscope Model EG-760R (K172916)
Intended Use / Indications for Use

FUJIFILM Ultrasonic Endoscopes EG-580UT and EG-580UR are intended to provide ultrasonic images of submucosal and peripheral organs of the upper gastrointestinal tract for observation, diagnosis, and endoscopic treatment. These products are intended to be used with a FUJIFILM ultrasonic processor. These products are not intended for use on children and infants.

Device Description

FUJIFILM Ultrasonic Endoscopes EG-580UT and EG-580UR are comprised of three general sections: a control portion, an insertion portion and an umbilicus. The control portion controls the angulation of the endoscope. This portion also controls the flexibility of the distal end in the endoscope. The insertion portion contains glass fiber bundles, several channels and a charge-coupled device (CCD) image sensor in its distal end. The channels in the insertion portion assist in delivering air/suction as well as endoscope accessories, such as forceps. The glass fiber bundles allow light to travel through the endoscope and emit light from the tip of the insertion portion to illuminate the body cavity. This provides enough light to the CCD image sensor to capture an image and display it on the monitor. The umbilicus consists of electronic components needed to operate the endoscope when plugged into the video processor, light source, and ultrasonic processor. The endoscopes are used in combination with FUJIFILM’s video processors, light sources, ultrasonic processors and peripheral devices such as monitor, printer, foot switch, and cart. All of these combinations were previously cleared in K181763.

Comparison of Technological Characteristics

FUJIFILM Ultrasonic Endoscopes EG-580UT and EG-580UR differ from the predicate devices EG-530UT2 and EG-530UR2 in terms of technological characteristics and materials. The subject and predicate devices share the same mode of operation and intended use.

A summary of major differences between the subject devices EG-580UT and EG-580UR and the predicate devices EG-530UT2 and EG-530UR2 is provided as follows:

- The subject device uses a G7 control portion, whereas the primary predicate device contains a G5 control portion.
- Compatibility with different accessories
- Minor material changes to the insertion portion

Performance Data

Biocompatibility of the subject device was evaluated using the following consensus standards: ISO 10993-1:2009, ISO 10993-5:2009, and ISO 10993-10:2010. Biocompatibility testing was conducted in accordance with the FDA guidance, *Use of International Standard ISO 10993-1, “Biological...*

Cleaning, high-level disinfection, and sterilization of the subject device were evaluated according to the following consensus standards: AAMI TIR12:2010, AAMI TIR30:2011. Validation of the cleaning, disinfection, and sterilization instructions was performed in accordance with FDA’s guidance, “Reprocessing Medical Devices in Health Care Settings: Validation Methods and Labeling,” published March 17, 2015.

The subject device met performance specifications in the following additional testing:

**Substantial Equivalence**

The subject devices FUJIFILM Ultrasonic Endoscopes EG-580UT and EG-580UR are substantially equivalent to the predicate devices, FUJIFILM Ultrasonic Endoscopes EG-530UT2 and EG-530UR2 (K181763). The subject devices have the same intended use/indications for use and substantially similar technological characteristics and principles of operation as that of the predicate devices. Material changes to the predicate devices have been validated through biocompatibility testing. Thus, the subject devices FUJIFILM Ultrasonic Endoscopes EG-580UT and EG-580UR are substantially equivalent to the predicate devices.

**Conclusions**

The subject devices FUJIFILM Ultrasonic Endoscopes EG-580UT and EG-580UR are substantially equivalent to the predicate devices based on the same intended use, indications for use, similar technological characteristics and materials. The differences in technological characteristics and materials between the subject and predicate devices raise no new issues of safety or effectiveness. Bench testing data demonstrated that the subject devices are substantially equivalent in performance to the predicate devices. The difference in materials between subject and predicate devices has been validated through biocompatibility testing. Thus, the subject devices FUJIFILM Ultrasonic Endoscopes EG-580UT and EG-580UR are substantially equivalent to the predicate devices, FUJIFILM Ultrasonic Endoscopes EG-530UT2 and EG-530UR2 (K181763).
