510 K Summary

according to 21 CFR 807.92

A1 Address
SCHILLER AG
Altgasse 68
CH-6341 Baar
Switzerland

Contact Name: Mr. Markus Buetler
Tel: 001 41 41 766 4252
Date: 21th November 2003

A2 Device Name
1. Trade Name: ARGUS PB-2200
2. Common Name: Monitoring System

A3 Legally Marketed Device
Legally Marketed Device to which this submitted device is compared:

ARGUS PB-1000 System K 012226

A4 Intended Use

The Monitoring System ARGUS PB-2200 is for the monitoring of vital parameters such as:
- Invasive Blood Pressure: systolic, diastolic and mean pressure
- CO₂, eCO₂ and CO₂ ins, main and/or sidestream
- FIO₂

It will extend the functionality of the existing Argus PB –1000 System (K012226).
The system comprises the Parameter Box PB-1000 and the Visualisation Unit ARGUS PRO. The two units are connected via a serial interface.
All vital parameters and evaluations are registered and calculated in the PB-1000.
This data is then transmitted to the visualisation unit ARGUS PRO or another generally used PC via the serial interface. All data can be shown and monitored on the ARGUS PRO.
The PB-1000 operated using an internal battery and an external power input (RS 232/12V), which is, like the data transmission, completely separate from the visualisation unit. The ARGUS PRO is powered via the normal mains connection 230V/110V.
The system is intended for use in the Intensive Care Unit, in the Recovery Room, in the Operation Room and during hospital internal transport.

**Discussion of Differences:**

None of the above differences (1 or 2) can be considered as safety relevant differences.

We consider the submitted device to be as safe and effective as the Predicate ARGUS PB-1000 System (K012226) device.
B1 Non-Clinical Tests

1. Electrical Safety and Reliability
   The device has been tested to be in accordance with the following standards:
   EN 60601-1:1990: Safety of Medical Electrical Equipment part 1, General requirements.
   EN 60601-1-1:1993 Safety requirements for medical electrical systems.
   EN 60601-2-34:1995 Particular requirements for the safety of the blood pressure monitoring equipment.

   All tests are passed.

4) Data related to software quality
   SCHILLER has reviewed its software development process following the guideline "reviewer guidance for computer controlled medical devices undergoing 510 (k) review". Device software requirements, software structure chart, software development, software revision/modification, software identification, software verification, validation and testing are described in the data attached.

B2 Clinical Tests

n.a.

B3 Conclusions from Tests

The fulfilling of the above standards ensures the safety and effectiveness of the submitted device. We consider the submitted device to be as safe and effective as the Predicate ARGUS PB-1000 System Device. (K 012226)

Re: K033738
  Trade Name: ARGUS PB-2200 Patient Monitoring System
  Regulation Number: 21 CFR 870.1110
  Regulation Name: Blood Pressure Computer
  Regulatory Class: Class II (two)
  Product Code: DSK
  Dated: August 2, 2004
  Received: August 4, 2004

Dear Mr. Buetler:

We have reviewed your Section 510(k) premarket notification of intent to market the device referenced above and have determined the device is substantially equivalent (for the indications for use stated in the enclosure) to legally marketed predicate devices marketed in interstate commerce prior to May 28, 1976, the enactment date of the Medical Device Amendments, or to devices that have been reclassified in accordance with the provisions of the Federal Food, Drug, and Cosmetic Act (Act) that do not require approval of a premarket approval application (PMA). You may, therefore, market the device, subject to the general controls provisions of the Act. The general controls provisions of the Act include requirements for annual registration, listing of devices, good manufacturing practice, labeling, and prohibitions against misbranding and adulteration.

If your device is classified (see above) into either class II (Special Controls) or class III (PMA), it may be subject to such additional controls. Existing major regulations affecting your device can be found in the Code of Federal Regulations, Title 21, Parts 800 to 898. In addition, FDA may publish further announcements concerning your device in the Federal Register.
Please be advised that FDA’s issuance of a substantial equivalence determination does not mean that FDA has made a determination that your device complies with other requirements of the Act or any Federal statutes and regulations administered by other Federal agencies. You must comply with all the Act’s requirements, including, but not limited to: registration and listing (21 CFR Part 807); labeling (21 CFR Part 801); good manufacturing practice requirements as set forth in the quality systems (QS) regulation (21 CFR Part 820); and if applicable, the electronic product radiation control provisions (Sections 531-542 of the Act); 21 CFR 1000-1050. This letter will allow you to begin marketing your device as described in your Section 510(k) premarket notification. The FDA finding of substantial equivalence of your device to a legally marketed predicate device results in a classification for your device and thus, permits your device to proceed to the market.

If you desire specific advice for your device on our labeling regulation (21 CFR Part 801), please contact the Office of Compliance at (301) 594-4646. Also, please note the regulation entitled, "Misbranding by reference to premarket notification" (21 CFR Part 807.97) you may obtain. Other general information on your responsibilities under the Act may be obtained from the Division of Small Manufacturers, International and Consumer Assistance at its toll-free number (800) 638-2041 or (301) 443-6597 or at its Internet address http://www.fda.gov/cdrh/dsma/dsmamain.html

Sincerely yours,

Indications for Use

510(k) Number (if known): K033738

Device Name: Monitoring System ARGUS PB-2200

Indications For Use:
The monitoring system ARGUS PB-2200 is for the monitoring of vital parameters such as:

- Invasive blood pressure: systolic, diastolic and mean pressure
- CO₂, etCO₂ and CO₂ins, main and/or sidestream
- FIO2

It will extend the functionality of the existing Argus PB-1000 system (K012226). The system comprises the parameter box PB-1000 and the visualisation unit ARGUS PRO. The two units are connected via a serial interface. All vital parameters and evaluations are registered and calculated in the PB-2200. This data is then transmitted to the visualisation unit ARGUS PRO or another generally used PC via the serial interface. All data can be shown and monitored on the ARGUS PRO. The PB-2200 is operated using an internal battery and an external power input (RS 232/12V), which is, like the data transmission, completely separate from the visualisation unit. The ARGUS PRO is powered via the normal mains connection 230V/110V.

The system is intended for use in the intensive care unit, in the recovery room, in the operating theatre and during hospital internal transports.
