SEP - 1 2005

510(k) Summary for the
Dimension® Cyclosporine CSAE Flex® reagent cartridge (DF108)

A. 510(k) Number: k052017

B. Analyte: Cyclosporine

C. Type of Test: qualitative or quantitative homogeneous enzyme immunoassay

D. Applicant: Dade Behring Inc., P.O. Box 6101, Newark, DE 19714-6101
   (302) 631-9454
   Contact: Andrea M. Tasker, Regulatory Affairs and Compliance Manager

E. Proprietary and Established Names: Dimension® Cyclosporine CSAE Flex® reagent cartridge

F. Regulatory Information:

1. Regulation section: 21CFR §862.1235

2. Classification: Class II (Special Controls)

3. Product Code: MKW

4. Panel: Clinical Toxicology Test Systems

G. Intended Use:

1. Intended for Use:
   The Cyclosporine CSAE Flex® reagent cartridge is an in vitro diagnostic test intended to quantitatively measure cyclosporine A (CSA) in human whole blood for the Dimension® clinical chemistry system.

2. Indications for Use:
   The Cyclosporine CSAE Flex® reagent cartridge is an in vitro diagnostic test intended to quantitatively measure cyclosporine A (CSA) in human whole blood for the Dimension® clinical chemistry system. Measurements of CSA are used as an aid in the management of heart, liver and kidney transplant patients.

3. Special condition for use statement(s): none
4. **Special instrument Requirements:** Dimension® clinical chemistry system with Heterogeneous Module.

**H. Device Description:**
The Dimension® CSAE Cyclosporine Flex® reagent cartridge (DF108) is an in vitro diagnostic device that consists of prepackaged reagents in a plastic eight well cartridge for use on the Dade Behring Dimension® clinical chemistry system for the quantitative determination cyclosporine A (CSA) in human whole blood.

**I. Substantial Equivalence Information:**
1. **Predicate Device:** Abbott TDx® /TDx FLx® Cyclosporine Monoclonal Whole Blood Assay

2. **Predicate K Number(s):** P890025

3. **Comparison with Predicate:**

   EP7-A  Interference Testing in Clinical Chemistry
   EP5-A  Evaluation of Precision Performance of Clinical Chemistry Devices
   CEN 13640 Stability testing of In-Vitro Diagnostic Devices

K. Test Principle:
   The automated Dimension® CSAE method uses an immunoassay technique in which
   free and CSA-bound antibody-enzyme species are separated using magnetic particles.
   The assay is performed using a method specific Flex® reagent cartridge. The calibrators
   and controls for this assay are sold separately.
L. Performance Characteristics:

1. Reproducibility
Reproducibility testing was done in accordance with the CLSI/NCCLS Approved Guideline for Evaluation of Precision Performance of Clinical Chemistry Devices (EP5-A, Feb. 1999). Specimens at each level were analyzed in duplicate, once a day, for 20 days. The within-run (repeatability) and total (within-lab) standard deviations were calculated by analysis of variance (ANOVA) method.

More Diagnostics Cyclosporine Control is a product of More Diagnostics Inc., Los Osos, CA. 93402

2. Method Comparison
A total of 140 specimens were tested with the Dimension® CSAE assay, with the Abbott TDx® /TDx FLx® Cyclosporine Monoclonal Whole Blood Assay and by LC/MS technology. Linear regression was used to calculate a slope, intercept and correlation coefficient. The model equation for regression statistics is: Result of Dimension® system = (Slope x comparative method result) + Intercept.

TDx® is the registered trademark of Abbott Diagnostics, Abbott Park, IL 60064
3. Linearity
Standard solutions were prepared by sequential mixing to create a set of eight equally spaced sample pools starting with a high and low pool of known analyte concentration. Theoretical concentrations were computed for all intermediate pools based on the initial concentrations of the high and low pools. The analysis of cyclosporine on the Dimension® RxL by the Dimension® CSAE method shows a deviation from the estimated line of less than 15 ng/mL [12.5 nmol/L] with 95% confidence at the analytical concentration of 794.5 ng/mL [662.1 nmol/L]. The lower limit of the linearity claim is 350.0 ng/mL [291.7 nmol/L].

4. Interference Testing
Interference testing was performed according to the CLSI/NCCLS Protocol EP-7A. A summary of the substances that do not interfere with the Dimension® Cyclosporine methods when present in whole blood at the concentrations indicated. Inaccuracies (biases) due to these substances are less than 10% at a CSA level equivalent to 800 ng/mL [665.6 nmol/L] can be found in the package insert.

5. Analytical Specificity
Six major metabolites were evaluated for cross-reactivity in the presence of 500 ng/mL [416 nmol/L] cyclosporine. The percent cross-reactivity was calculated as follows:

\[
\% \text{ cross reactivity} = \frac{\text{measured CSA} - \text{control CSA (500 ng/mL) [416 nmol/L]}}{\text{metabolite added}} \times 100
\]

<table>

6. Recovery
Known amounts of CSA were added to human whole blood samples with concentrations of 610.0, 1232.2, and 1861.8 ng/mL [507.5, 1025.2, 1861.8 nmol/L]. CSA concentrations on these samples were then measured and the calculated percent recovery ranged from 94.3% to 103.1% with a mean recovery of 101.0%.

\[
\text{Percent Recovery} = \frac{\text{Value obtained} - \text{Baseline}}{\text{Amount Added}} \times 100
\]
7. Functional Sensitivity
The functional sensitivity of the CSAE method was demonstrated to be less than 350ng/mL. The functional sensitivity is defined as the lowest concentration at which the intra-assay coefficient of variation is not greater than 20%.

Re: k052017

Trade/Device Name: Dimension® Cyclosporine Extended Range Assay (CSAE)  
Flex® reagent cartridge

Regulation Number: 21 CFR 862.1235  
Regulation Name: Cyclosporine test system  
Regulatory Class: Class II  
Product Code: MKW  
Dated: August 23, 2005  
Received: August 23, 2005

Dear Ms. Tasker:

We have reviewed your Section 510(k) premarket notification of intent to market the device referenced above and have determined the device is substantially equivalent (for the indications for use stated in the enclosure) to legally marketed predicate devices marketed in interstate commerce prior to May 28, 1976, the enactment date of the Medical Device Amendments, or to devices that have been reclassified in accordance with the provisions of the Federal Food, Drug, and Cosmetic Act (Act) that do not require approval of a premarket approval application (PMA). You may, therefore, market the device, subject to the general controls provisions of the Act. The general controls provisions of the Act include requirements for annual registration, listing of devices, good manufacturing practice, labeling, and prohibitions against misbranding and adulteration.

If your device is classified (see above) into either class II (Special Controls) or class III (PMA), it may be subject to such additional controls. Existing major regulations affecting your device can be found in Title 21, Code of Federal Regulations (CFR), Parts 800 to 895. In addition, FDA may publish further announcements concerning your device in the Federal Register.

Please be advised that FDA's issuance of a substantial equivalence determination does not mean that FDA has made a determination that your device complies with other requirements of the Act or any Federal statutes and regulations administered by other Federal agencies. You must comply with all the Act's requirements, including, but not limited to: registration and listing (21 CFR Part 807);
This letter will allow you to begin marketing your device as described in your Section 510(k) premarket notification. The FDA finding of substantial equivalence of your device to a legally marketed predicate device results in a classification for your device and thus, permits your device to proceed to the market.

If you desire specific information about the application of labeling requirements to your device, or questions on the promotion and advertising of your device, please contact the Office of In Vitro Diagnostic Device Evaluation and Safety at (240) 276-0484. Also, please note the regulation entitled, "Misbranding by reference to premarket notification" (21CFR Part 807.97). You may obtain other general information on your responsibilities under the Act from the Division of Small Manufacturers, International and Consumer Assistance at its toll-free number (800) 638-2041 or (301) 443-6597 or at its Internet address http://www.fda.gov/cdrh/industry/support/index.html.

Sincerely yours,

Carol C. Benson, M.A.
Acting Director
Division of Chemistry and Toxicology
Office of In Vitro Diagnostic Device Evaluation and Safety
Center for Devices and Radiological Health
