510(k) Summary of Safety and Effectiveness Information

This summary of 510(k) safety and effectiveness information is being submitted in accordance with the requirements of SMDA 1990 and 21 CFR 807.92.

Submitter's Name: Lorraine H Piestrak
Dade Behring Inc.
P.O. Box 6101
Newark, DE 19714-6101

Date of Preparation: June 12, 2005

Name of Products:
Dimension Vista™ Acetaminophen (ACTM) Flex® reagent cartridge
Dimension Vista™ Amylase (AMY) Flex® reagent cartridge
Dimension Vista™ Creatine Kinase (CK) Flex® reagent cartridge
Dimension Vista™ Cholesterol (CHOL) Flex® reagent cartridge
Dimension Vista™ Gamma-glutamyl transferase (GGT) Flex® reagent cartridge
Dimension Vista™ Glucose (GLU) Flex® reagent cartridge
Dimension Vista™ High Density Lipoprotein Cholesterol (HDLC) Flex® reagent cartridge
Dimension Vista™ Low Density Lipoprotein Cholesterol (LDLC) Flex® reagent cartridge
Dimension Vista™ Lidocaine (LIDO) Flex® reagent cartridge
Dimension Vista™ Magnesium (MG) Flex® reagent cartridge
Dimension Vista™ Pseudocholinesterase (PCHE) Flex® reagent cartridge
Dimension Vista™ Phosphorus (PHOS) Flex® reagent cartridge
Dimension Vista™ Procainamide (PROC) Flex® reagent cartridge
Dimension Vista™ Salicylate (SAL) Flex® reagent cartridge
Dimension Vista™ Thyroxine (T4) Flex® reagent cartridge
Dimension Vista™ Tobramycin (TOBR) Flex® reagent cartridge
Dimension Vista™ Triglyceride (TRIG) Flex® reagent cartridge
Dimension Vista™ Uric Acid (URCA) Flex® reagent cartridge
Dimension Vista™ Valproic Acid (VALP) Flex® reagent cartridge
Dimension Vista™ Vancomycin (VANC) Flex® reagent cartridge

* Not exempt from premarket notification per 862.9 or per Reserved Medical Devices list

**Device Description:**
Dade Behring Dimension Vista™ Flex® reagent cartridges are prepackaged in-vitro diagnostic test methods (assays) that are specifically designed to be used on the Dade Behring Dimension Vista™ Integrated system, a floor model, fully automated, microprocessor-controlled, integrated instrument system. The Dimension Vista™ system
was previously cleared with seven associated test methods (K 051087). This Special 510(k) is submitted for a packaging modification to in-vitro diagnostic devices that have been cleared under the 510(k) process for use on Dimension® clinical chemistry systems. The packaging change is to allow use on the Dimension Vista™ system.

The reagents contained in the Dimension Vista™ Flex® reagent cartridges are the same as those contained in the Flex® reagent cartridges manufactured for the Dimension® clinical chemistry systems, another family of Dade Behring analyzers. The packaging modification, does not affect the intended use of the devices, nor does it alter the fundamental scientific technology of the devices.

Intended Use:

Acetaminophen
The ACTM method is an in vitro diagnostic test for the quantitative measurement of acetaminophen, an analgesic and antipyretic, in human serum and plasma on the Dimension Vista™ System. Acetaminophen measurements may be used in the diagnosis and treatment of acetaminophen overdose.

Amylase
The AMY method is an in vitro diagnostic test for the quantitative measurement of amylase in human serum, plasma, and urine on the Dimension Vista™ System.

Creatine Kinase
The CK method is an in vitro diagnostic test for the quantitative measurement of creatine kinase in human serum and plasma on the Dimension Vista™ System.

Cholesterol
The CHOL method is an in vitro diagnostic test for the quantitative measurement of cholesterol in human serum and plasma on the Dimension Vista™ System.

Gamma-glutamyl transferase
The GGT method is an in vitro diagnostic test for the quantitative measurement of gamma-glutamyl transferase in human serum and plasma on the Dimension Vista™ System.

Glucose
The GLU method is an in vitro diagnostic test for the quantitative measurement of glucose in human serum, plasma, urine and cerebrospinal fluid on the Dimension Vista™ System.

High-Density Lipoprotein Cholesterol
The HDLC method is an in vitro diagnostic test for the quantitative measurement of high-density lipoprotein cholesterol in human serum and plasma on the Dimension
Vista™ System. Measurements of high-density lipoprotein cholesterol are used as an aid to diagnose lipid disorders.

**Low-Density Lipoprotein Cholesterol**
The LDLC method is an *in vitro* diagnostic test for the quantitative measurement of low-density lipoprotein cholesterol in human serum and plasma on the Dimension Vista™ System. Measurements of low-density lipoprotein cholesterol are used in the diagnosis and treatment of lipid disorders such as diabetes mellitus, atherosclerosis and various liver and renal diseases.

**Lidocaine**
The LIDO method is an *in vitro* diagnostic test for the quantitative measurement of lidocaine in human serum and plasma on the Dimension Vista™ System. Lidocaine measurements may be used in the diagnosis and treatment of lidocaine overdose, and in therapeutic drug monitoring.

**Magnesium**
The MG method is an *in vitro* diagnostic test for the quantitative measurement of magnesium in human serum, plasma, and urine on the Dimension Vista™ System.

**Pseudocholinesterase**
The PCHE method is an *in vitro* diagnostic test for the quantitative measurement of pseudocholinesterase activity in human serum and plasma on the Dimension Vista™ System. PCHE measurements may be used in the diagnosis and treatment of cholinesterase inhibition disorders.

**Phosphorus**
The PHOS method is an *in vitro* diagnostic test for the quantitative measurement of phosphorus in human serum, plasma, and urine on the Dimension Vista™ System.

**Procainamide**
The PROC method is an *in vitro* diagnostic test for the quantitative measurement of procainamide in human serum and plasma on the Dimension Vista™ System. Procainamide measurements may be used in the diagnosis and treatment of procainamide overdose, and in therapeutic drug monitoring.

**Salicylate**
The SAL method is an *in vitro* diagnostic test for the quantitative measurement of salicylate in human serum on the Dimension Vista™ System. Salicylate test results may be used in the diagnosis and treatment of salicylate overdose and for monitoring salicylate levels during therapy.

**Thyroxine**
The T4 method is an *in vitro* diagnostic test for the quantitative measurement of total thyroxine in human serum and plasma on the Dimension Vista™ System.
**Tobramycin**
The TOBR method is an *in vitro* diagnostic test for the quantitative measurement of tobramycin, an aminoglycoside antibiotic, in human serum and plasma on the Dimension Vista™ System. Tobramycin measurements may be used in the diagnosis and treatment of tobramycin overdose and in monitoring levels of tobramycin to ensure appropriate therapy.

**Triglyceride**
The TRIG method is an *in vitro* diagnostic test for the quantitative measurement of triglycerides in human serum and plasma on the Dimension Vista™ System. Measurements obtained are used in the diagnosis and treatment of patients with diabetes mellitus, nephrosis, liver obstruction, other diseases involving lipid metabolism or various endocrine disorders.

**Uric Acid**
The URCA method is an *in vitro* diagnostic test for the quantitative measurement of uric acid in human serum, plasma, and urine on the Dimension Vista™ System.

**Valproic Acid**
The VALP method is an *in vitro* diagnostic test for the quantitative measurement of valproic acid in human serum and plasma on the Dimension Vista™ System. Valproic acid measurements may be used in the diagnosis and treatment of valproic acid overdose and in monitoring levels of valproic acid to ensure appropriate therapy.

**Vancomycin**
The VANC method is an *in vitro* diagnostic test for the quantitative measurement of vancomycin, a glycopeptide antibiotic, in human serum and plasma on the Dimension Vista™ System. Vancomycin measurements may be used in the diagnosis and treatment of vancomycin overdose and in monitoring levels of vancomycin to ensure appropriate therapy.
Comparison to Predicate Device:
Both the Dimension Vista™ Flex® reagent cartridges and the predicate Dimension® Flex® reagent cartridges contain prepackaged reagents in flexible plastic, cartridges. A comparison of the important similarities and differences between the two Flex® cartridges is provided in the following table:

Comments on Substantial Equivalence:

The Dade Behring Dimension Vista™ Flex® reagent cartridges and the Dimension® Flex® reagent cartridges are designed similarly for the same purpose. Both contain prepackaged reagents for in-vitro diagnostic tests that are processed on microprocessor-controlled, integrated instrument systems to analyze a variety of analytes in human specimens.

The reagents contained in the Dimension Vista™ Flex® reagent cartridges are the same as those contained in the Flex® reagent cartridges manufactured for the Dimension® clinical chemistry systems, another family of Dade Behring analyzers. The packaging modifications, do not affect the intended use of the devices, nor do they alter the fundamental scientific technology of the devices.

Comparative testing described in the protocol included in this submission demonstrates substantially equivalent performance.
Conclusion:
The Flex® reagent cartridges, containing reagents for testing ACTM, AMY, CK, CHOL, GGT, GLU, HDLC, LDLC, LIDO, MG, PCHE, PHOS, PROC, SAL, T4, TOBR, TRIG, URCA, VALP, and VANC on the Dimension® Vista™ Integrated system are substantially equivalent in design, principle, and performance to the Dimension® system Flex® reagent cartridges. They have the same intended use and indications for use. Comparative testing also demonstrates substantially equivalent performance.

Ms. Lorraine H. Piestrak  
Regulatory Affairs & Compliance Manager  
Dade Behring, Inc.  
500 GBC Drive  
PO Box 6101, M/S 514  
Newark, DE 19714-6101  

JUL 10 2006

Dear Ms. Piestrak:

We have reviewed your Section 510(k) premarket notification of intent to market the device referenced above and have determined the device is substantially equivalent (for the indications for use stated in the enclosure) to legally marketed predicate devices marketed in interstate commerce prior to May 28, 1976, the enactment date of the Medical Device Amendments, or to devices that have been reclassified in accordance with the provisions of the Federal Food, Drug, and Cosmetic Act (Act) that do not require approval of a premarket approval application (PMA). You may, therefore, market the device, subject to the general controls provisions of the Act. The general controls provisions of the Act include requirements for annual registration, listing of devices, good manufacturing practice, labeling, and prohibitions against misbranding and adulteration.

If your device is classified (see above) into either class II (Special Controls) or class III (PMA), it may be subject to such additional controls. Existing major regulations affecting your device can be found in Title 21, Code of Federal Regulations (CFR), Parts 800 to 895. In addition, FDA may publish further announcements concerning your device in the Federal Register.

Please be advised that FDA's issuance of a substantial equivalence determination does not mean that FDA has made a determination that your device complies with other requirements of the Act or any Federal statutes and regulations administered by other Federal agencies. You must comply with all the Act's requirements, including, but not limited to: registration and listing (21 CFR Part 807); labeling (21 CFR Parts 801 and 809); and good manufacturing practice requirements as set forth in the quality systems (QS) regulation (21 CFR Part 820).
This letter will allow you to begin marketing your device as described in your Section 510(k) premarket notification. The FDA finding of substantial equivalence of your device to a legally marketed predicate device results in a classification for your device and thus, permits your device to proceed to the market.

If you desire specific information about the application of labeling requirements to your device, or questions on the promotion and advertising of your device, please contact the Office of In Vitro Diagnostic Device Evaluation and Safety at (240) 276-0484. Also, please note the regulation entitled, "Misbranding by reference to premarket notification" (21CFR Part 807.97). You may obtain other general information on your responsibilities under the Act from the Division of Small Manufacturers, International and Consumer Assistance at its toll-free number (800) 638-2041 or (301) 443-6597 or at its Internet address http://www.fda.gov/cdrh/industry/support/index.html.

Sincerely yours,

Alberto Gutierrez, Ph.D.

Indications for Use

510(k) Number (if known):

Device Name: Dimension Vista™ Acetaminophen (ACTM) Flex® reagent cartridge

Indications For Use:

The Dimension Vista™ Acetaminophen (ACTM) Flex® reagent cartridge is a device intended to measure acetaminophen, an analgesic and antipyretic (fever reducing) drug, in serum and plasma. Measurements obtained by this device are used in the diagnosis and treatment of acetaminophen overdose.
Indications for Use

510(k) Number (if known):

Device Name: Dimension Vista™ Amylase (AMY) Flex® reagent cartridge

Indications For Use:

The Dimension Vista™ Amylase (AMY) Flex® reagent cartridge is a device intended to measure the activity of the enzyme amylase in serum, plasma and urine. Amylase measurements are used primarily for the diagnosis and treatment of pancreatitis (inflammation of the pancreas).
Indications for Use

510(k) Number (if known):

Device Name: Dimension Vista™ Creatine Kinase (CK) Flex® reagent cartridge

Indications For Use:

The Dimension Vista™ Creatine Kinase (CK) Flex® reagent cartridge is a device intended to measure the activity of the enzyme creatine kinase in serum and plasma. Measurements of creatine kinase are used in the diagnosis and treatment of myocardial infarction and muscle diseases such as progressive Duchenne-type muscular dystrophy.

Indications for Use

510(k) Number (if known):

Device Name: Dimension Vista™ Thyroxine (T4) Flex® reagent cartridge

Indications For Use:

The Dimension Vista™ Thyroxine (T4) Flex® reagent cartridge is a device intended to measure total (free and protein bound) thyroxine (thyroid hormone) in serum and plasma. Measurements obtained by this device are used in the diagnosis and treatment of thyroid diseases.

Prescription Use __X__ AND/OR Over-The-Counter Use ______
(Part 21 CFR 801 Subpart D) (21 CFR 801)

(PLEASE DO NOT WRITE BELOW THIS LINE-CONTINUE ON ANOTHER PAGE IF NEEDED)

Indications for Use

510(k) Number (if known): 

Device Name: Dimension Vista™ Tobramycin (TOBR) Flex® reagent cartridge

Indications For Use:

The Dimension Vista™ Tobramycin (TOBR) Flex® reagent cartridge is a device intended to measure tobramycin, an aminoglycoside antibiotic drug, in plasma and serum. Measurements obtained by this device are used in the diagnosis and treatment of tobramycin overdose and in monitoring levels of tobramycin to ensure appropriate therapy.

Prescription Use X AND/OR Over-The-Counter Use _______
(Part 21 CFR 801 Subpart D) (21 CFR 801)

Indications for Use

510(k) Number (if known):

Device Name: Dimension Vista™ Triglyceride (TRIG) Flex® reagent cartridge

Indications For Use:

The Dimension Vista™ Triglyceride (TRIG) Flex® reagent cartridge is a device intended to measure triglyceride (neutral fat) in serum and plasma. Measurements obtained by this device are used in the diagnosis and treatment of patients with diabetes mellitus, nephrosis, liver obstruction, other diseases involving lipid metabolism, or various endocrine disorders.

Prescription Use X AND/OR Over-The-Counter Use
(Part 21 CFR 801 Subpart D) (21 CFR 801)

510(k) Number (if known):

Device Name: Dimension Vista™ Uric Acid (URCA) Flex® reagent cartridge

Indications For Use:

The Dimension Vista™ Uric Acid (URCA) Flex® reagent cartridge is a device intended to measure uric acid in serum, plasma, and urine. Measurements obtained by this device are used in the diagnosis and treatment of numerous renal and metabolic disorders, including renal failure, gout, leukemia, psoriasis, starvation or other wasting conditions, and of patients receiving cytotoxic drugs.

Prescription Use X AND/OR Over-The-Counter Use _____
(Part 21 CFR 801 Subpart D) (21 CFR 801)

Indications for Use

510(k) Number (if known):

Device Name: Dimension Vista™ Valproic Acid (VALP) Flex® reagent cartridge

Indications For Use:

The Dimension Vista™ Valproic Acid (VALP) Flex® reagent cartridge is a device intended to measure valproic acid, an anti-convulsant drug in serum and plasma. Measurements obtained may be used in the diagnosis and treatment of valproic acid overdose and in monitoring levels of valproic acid to ensure appropriate therapy.

Prescription Use _____ X _____ AND/OR Over-The-Counter Use _____
(Part 21 CFR 801 Subpart D) (21 CFR 801)

Indications for Use

510(k) Number (if known):

Device Name: Dimension Vista™ Vancomycin (VANC) Flex® reagent cartridge

Indications For Use:

The Dimension Vista™ Vancomycin (VANC) Flex® reagent cartridge is a device intended to measure vancomycin, an antibiotic drug, in serum and plasma. Measurements obtained by this device are used in the diagnosis and treatment of vancomycin overdose and in monitoring the level of vancomycin to ensure appropriate therapy.
