Enturia recommends all users participate in a product in-service training prior to use. In-servicing is available from your Enturia sales representative.

ChloraPrep is a fast-acting, broad spectrum, persistent antiseptic that significantly reduces the number of microorganisms on intact skin.

To Reduce Risk of Fire:
- Do not use ignition source (e.g., cautery, laser) until product is completely dry (minimum of 3 minutes on hairless skin)

Allow preparation to completely dry:
- if the preparation area is to be extended, or
- if prepping for an additional procedure, or
- if re-application of skin preparation is required.
- drying time for dry surgical sites is approximately three (3) minutes.
- drying time for moist surgical sites is approximately three (3) minutes.

Whenever prepping the neck area, place towels under each side to absorb excess solution.
- do not allow the solution to pool.
- remove wet towels, drapes, and gowns before draping.
- avoid getting solution into hairy areas.
- Solution may take much longer to dry or may not dry completely.

How to remove ChloraPrep with Tint:
- It is recommended that ChloraPrep with Tint remain on the skin, especially at the incision site; post procedure, to provide continued antimicrobial activity. The tint will slowly fade from the skin.
- If removal is necessary for surgical site cleansing after stitching, remove with soap and water, alcohol, or a ChloraPrep untinted applicator.

<tr>
<td>Chlorhexidine Gluconate 2% w/v</td>
<td>Antiseptic</td>
</tr>
<tr>
<td>Isopropyl Alcohol 70% v/v</td>
<td>Antiseptic</td>
</tr>
</tbody>
</table>

**Use**

For the preparation of the patient’s skin prior to surgery.

**Warnings**

- For single use only. Flammable, keep away from fire or flame. To reduce risk of fire:
  - do not use 26-mL applicator for head and neck surgery
  - do not use 26-mL applicator if head and neck surgery

**Directions**

- Minimal treatment area for one applicator is approximately 1126 cm² (approx. 13.2 in. x 13.2 in.).
  - the end of prep, discard any portion of the solution which is not required to cover the prep area.
  - Use a small applicator instead.
  - Store surgical areas in dry areas. If this occurs, gently remove any portion of the solution and then release the antiseptic. Do not touch the sponge.
  - Treatment area with antiseptic. Allow the area to air dry for approximately 30 seconds. Completely wet the treatment area with antiseptic. Allow the area to air dry for approximately three (3) minutes.

**Other Information**

- Keep out of reach of children. A dressing or medical wrap may be applied in the treatment area.
