Zarontin® (Esmolol Hydrochloride)

**DESCRIPTION**
Zarontin® (esmolol hydrochloride) is an antihypertensive, chemically designated as 1-(5-aminophenyl)-2-(1-naphtyl)ethanol-ethanesulfonic acid. The following structural formula represents:

CH₃

\[\text{CH}_3\text{CH}=\text{CHCH}_2\text{CH}_2\text{CH}=\text{CHCH}_2\text{OH}\]

Zarontin® (Esmolol Hydrochloride)

**Effects on Liver and Kidneys**
Esmolol hydrochloride is not metabolized by the liver and is excreted in urine. The drug is essentially unaffected by liver function. The drug is not excreted in the urine of patients with renal failure.

**Indications**
- 1. Therapy for the control of the onset of apoplexy (partial or total)
- 2. Preoperative treatment of patients who are scheduled for surgery
- 3. To control hypertension in patients with hypertension
- 4. To control hypertension in patients with hypertension

**CONTRAINDICATIONS**
Esmolol hydrochloride should not be used in patients with a history of hypersensitivity to esmolol or succinylcholine.

**Pregnancy**
Esmolol hydrochloride should not be used in patients who are pregnant or breast feeding.

**Drug Interactions**
Any drug that is metabolized by the liver or that is excreted in the urine may be affected by the administration of esmolol. In particular, drugs that are metabolized by the liver or that are excreted in the urine may be affected by the administration of esmolol.

**ADVERSE REACTIONS**
The most common adverse reactions are:
- 1. Bradycardia
- 2. Hypotension
- 3. Hypotension
- 4. Bradycardia
- 5. Bradycardia

**PRECAUTIONS**
Esmolol hydrochloride should be administered cautiously to patients who are known to have a history of hypertension or who are taking medication for hypertension.

**Dosage and Administration**
- 1. Initial dose: 50 mg
- 2. Maintenance dose: 50 mg
- 3. Maintenance dose: 50 mg
- 4. Maintenance dose: 50 mg

**ADDITIONAL INFORMATION**
Esmolol hydrochloride is available in 50 mg/mL, 100 mg/mL, and 150 mg/mL strengths. The drug should be administered by intravenous injection into a large vein or into a central vein. The drug should be administered slowly, over a period of 10 seconds to 1 minute.

**PATIENTS IN THE AGES OF 65 YEARS OR OLDER**
Esmolol hydrochloride is generally well tolerated in patients in the ages of 65 years or older. However, elderly patients may be particularly sensitive to the antihypertensive effects of esmolol.

**EDUCATIONAL INFORMATION**
- 1. The drug should be used with caution in patients who are taking medication for hypertension or who are taking medication for hypertension.
- 2. The drug should be used with caution in patients who are taking medication for hypertension or who are taking medication for hypertension.
- 3. The drug should be used with caution in patients who are taking medication for hypertension or who are taking medication for hypertension.

**MEDICATION GUIDE**
Zarontin® (Zarontin®) is a prescription medicine that is used to treat hypertension and hypertension.

**PRECAUTIONS**

Zarontin® (ethosuximide) Capsules, Oral Solution

When you get a new medicine

How should I store ZARONTIN?
• Store ZARONTIN capsules at room temperature, between 59°F to 86°F (15°C to 30°C).
• Store ZARONTIN oral solution in a tightly closed container at room temperature, between 59°F to 86°F (15°C to 30°C).

Tell your doctor for medical advice without first talking to your healthcare provider, you may ask your healthcare provider or pharmacist for information about ZARONTIN that is written for healthcare professionals. For more information, go to www.Pfizer.com or call 1-800-438-1985.

How should I take ZARONTIN?
• Take ZARONTIN exactly as prescribed. Your healthcare provider will tell you how much ZARONTIN to take and how often.
• Your healthcare provider may change your dose if your condition changes or if side effects occur. Do not change your dose except under the directions of your healthcare provider.

Tell your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

What should I avoid while taking ZARONTIN?
• Do not drink alcohol or take other medicines that may cause sleepiness or dizziness while taking ZARONTIN without first talking to your healthcare provider. ZARONTIN taken with alcohol or other drugs that cause sleepiness or dizziness may make your sleepiness or dizziness worse.
• Do not drive, operate heavy machinery, or do other dangerous activities until you know how ZARONTIN affects you and your thinking and motor skills.

What are the possible side effects of ZARONTIN?
• Serious allergic reactions. Call your healthcare provider right away if you have any of these symptoms: rash; hives; fever; swelling of your face, lips, tongue, or mouth; itching or peeling skin. Some patients may get an allergic reaction called angioedema, which causes swelling of your face, lips, tongue, or throat (false or swollen) or hives, and can happen more often or become worse.

Call your healthcare provider right away if you have any of the symptoms listed above. The most common side effects of ZARONTIN include:
• Indigestion, stomach pain
• Diarrhea
• Weight loss
• Flatulence
• Dizziness or lightheadedness
• Fatigue
• Headache
• Loss of concentration

Tell your healthcare provider about any side effects that bother you or that do not go away.

What are the possible side effects with ZARONTIN? With any medicine, call your healthcare provider for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.
