ENVIRONMENTAL ASSESSMENT

NDA 208798 Addendum EA

Environmental analysis

The applicant has provided the following calculation

"The annual amount of Fp (kg/year [yr]) produced for direct use (i.e., A) was calculated based on Teva's forecasted need for the peak year of (b)(4) for the Mechanical The available doses (55 mcg, 113 mcg, and MDPI inhaler 232 mcg) for the Fp ingredient were multiplied by the annual projected number of units for the peak years. The quantities contained in each inhaler are multiplied by the annual $\begin{array}{c} projection \ number \ of \ units \ and \ converted \ from \ mg/yr \ to \ kg/yr \ as \ shown \ in \ the \ following \ equations: \ A = \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4) \\ mg/dose \ x \end{array} \right] \left[\begin{array}{c} (b) (4)$ units/yr) + mg/dose xproduced for direct use."

(b) (4)

Almost everything is incorrect in this calculation

- 1.
- The values for "mg/dose" are actually "mg/unit." The conversion factor of ^{(b) (4)}kg/mcg should be ^{(b) (4)}kg/mg 2.

(b) (4) kg/year. Therefore the calculated ppb is still However the result is still ppb.

These levels are below 1 ppb at the point of entry into the aquatic environment. Pursuant to 21 CFR 25.31(b), the applicant claims a categorical exclusion from the requirement of an Environmental Assessment.

Reviewer's Assessment: Acceptable.
