**PHARMACOLOGY/TOXICOLOGY NDA REVIEW AND EVALUATION**

Application number: 212020  
Supporting document/s: 1  
Applicant's letter date: July 6, 2018  
CDER stamp date: July 6, 2018  
Product: Tranexamic Acid in Sodium Chloride Injection  
Indication: Patients with hemophilia for short-term use (two to eight days)  
to reduce or prevent hemorrhage and reduce the need for  
replacement therapy during and following tooth extraction.  
Applicant: Exela Pharma Sciences, LLC  
PO Box 818 1245 Blowing Rock Blvd  
Lenoir, NC 28645  
Review Division: Division of Hematology Oncology Toxicology  
(for Division of Hematology Products)  
Reviewer: Matthew D Thompson, PhD, MPH  
Supervisor/Team Leader: Christopher M Sheth, PhD  
Division Director: John Leighton, PhD, DABT  
Ann Farrell, MD (DHP)  
Project Manager: Kris Kolibab, PhD

# 1 Executive Summary

## 1.1 Introduction

Tranexamic acid is a synthetic lysine amino acid derivative, which diminishes the dissolution of hemostatic fibrin by plasmin. In the presence of tranexamic acid, the lysine receptor binding sites of plasmin for fibrin are occupied, preventing binding to fibrin monomers, thus preserving and stabilizing fibrin's matrix structure.

The Applicant, Exela Pharma Sciences, LLC, has submitted this 505(b)(2) NDA to support the use of Tranexamic Acid in Sodium Chloride Injection (10 mg per mL) in patients with hemophilia for short-term use (two to eight days) to reduce or prevent hemorrhage and reduce the need for replacement therapy during and following tooth extraction. This 505(b)(2) application is relying on FDA's finding of safety and effectiveness for the listed drug CYKLOKAPRON (NDA # 019281, Pharmacia and Upjohn Co.). Cyklokapon was initially approved in 1986.

The Applicant's formulation differs from the Cyklokapon formulation in the strength (concentration), [REDACTED] <sup>(b) (4)</sup> and the unit dose volume. Therefore, the Applicant is not pursuing a 505(j) ANDA pathway.

Exela Pharma Sciences submitted a statement that as of July 06, 2018, there are no unexpired exclusivities associated with NDA # 019281 and no relevant patent claims.

## 1.2 Brief Discussion of Nonclinical Findings

The Applicant is relying on the FDA's previous findings of safety and effectiveness for Cyklokapon. There is no nonclinical section in the submission.

## 1.3 Recommendations

### 1.3.1 Approvability

From the Pharmacology/Toxicology perspective, TRANEXAMIC ACID IN SODIUM CHLORIDE Injection may be approved for the proposed indication.

### 1.3.2 Additional Nonclinical Recommendations

None

### 1.3.3 Labeling

At the time of this review, the labeling negotiations with the Applicant are ongoing. The nonclinical sections of the label will be based on the label of Cyklokapon, the listed drug. The label will be updated based on the Physician Labeling Rule (PLR) and the Pregnancy and Lactation Labeling Rule (PLLR). Under section 12.1 of the label, the general mechanism of action for tranexamic acid is described; text used in the Cyklokapon label comparing tranexamic acid to other products has been removed based on 21 CFR 201.56(a)(2) whereby suggestions of therapeutic advantages based upon mechanism of action may be false or misleading, and therefore, must be avoided

(see *Guidance for Industry - Clinical Pharmacology Section of Labeling for Human Prescription Drug and Biological Products-Content and Format*).

## 2 Drug Information

### 2.1 Drug

**CAS Registry Number**

1197-18-8

**Generic Name**

Tranexamic acid

**Chemical Name**

trans-4-aminomethylcyclohexanecarboxylic acid

**Molecular Formula/Molecular Weight**C<sub>8</sub>H<sub>15</sub>NO<sub>2</sub>, 157.21 g/mol**Structure**

(Excerpted from Applicant's submission)

**Pharmacologic Class**

Antifibrinolytic

### 2.3 Drug Formulation

Tranexamic Acid in Sodium Chloride Injection is a clear to colorless sterile, nonpyrogenic injectable solution for intravenous administration. Each IV bag contains 1000 mg tranexamic acid, USP, 700 mg of sodium chloride, USP, and Water for Injection, USP. The aqueous solution has a pH of 6.5 to 8.0.

**Table 1: Formulation of Tranexamic Acid in Sodium Chloride Injection**

| Component           | Quality Standard | Function       | Amount      |             |                |
|---------------------|------------------|----------------|-------------|-------------|----------------|
|                     |                  |                | % w/v       | mg/mL       | Per Unit       |
| Tranexamic Acid     | USP              | Drug Substance | 1.0%        | 10 mg/mL    | 1000 mg/100mL  |
| Sodium Chloride     | USP              | (b) (4)        | 0.7%        | 7.0 mg/mL   | 700 mg/mL      |

| Route of Administration  | Intravenous Infusion | Route of Administration  | Intravenous Injection/Infusion |

<sup>1</sup>Information regarding RLD, CYKLOKAPRON (tranexamic acid) Injection formulation was obtained from its approved labeling.

(Excerpted from Applicant's submission)

## 2.4 Comments on Novel Excipients

None

## 2.5 Comments on Impurities/Degradants of Concern

None

## 2.6 Proposed Clinical Population and Dosing Regimen

The recommended dose of Tranexamic Acid in Sodium Chloride Injection is 10 mg per kg body weight intravenously administered as a single dose, immediately before tooth extractions. Following tooth extraction, Tranexamic Acid in Sodium Chloride Injection may be administered for 2 to 8 days at a dose of 10 mg per kg body weight three to four times daily, intravenously. This dosing is consistent with the listed drug Cyklokapron.

## 2.7 Regulatory Background

In correspondence with the Applicant on June 8, 2015 under IND # 126242, regarding the need for nonclinical studies, the Agency stated: "With regard to nonclinical studies: We agree that additional nonclinical pharmacology and toxicology studies are not needed for Exela's tranexamic acid (b) (4) injection."

In Type C WRO correspondence under IND # 126242, the Agency indicated a 505(b)(2) application appeared to be an acceptable approach based on the information provided.
