Date of This Review:	2/10/2023
Responsible OND Division:	Division of Oncology 3 (DO3)
Application Type and Number:	BLA 761198
Product Name and Strength:	Avzivi (bevacizumab-tbjn) injection 100 mg/4 mL and 400 mg/16 mL (25 mg/mL)
Product Type:	Single Ingredient Product
Applicant/Sponsor Name:	Bio-Thera Solutions Ltd. (BioThera)
Nexus NPNS ID #:	2022-154
DMAMES Biologics Suffix Specialist:	Carlos M Mena-Grillasca, BS Pharm
DMEPA 2 Director:	Danielle Harris, PharmD

1 PURPOSE OF REVIEW

This review is to reassess the proposed suffix, -tnjn, for BLA 761198, which was found conditionally acceptable on August 19, 2021^a, for inclusion in the nonproprietary name and communicates our recommendation for the nonproprietary name for BLA 761198.

1.1 Regulatory History

FDA found the proposed four-letter suffix, -tnjn, conditionally acceptable for BLA 761198 on August 19, 2021. However, BLA 761198 received a Complete Response (CR) letter on November 19, 2021^b. Thus, BioThera submitted a Class 2 Resubmission on October 28, 2022.

2 ASSESSMENT OF THE NONPROPRIETARY NAME

We reassessed the proposed suffix, -tnjn, using the principles described in the applicable guidance^c.

We determined that the proposed suffix -tnjn, is not too similar to any other products' suffix designation, does not look similar to the names of other currently marketed products, that the suffix is devoid of meaning, does not include any abbreviations that could be misinterpreted, and does not make any misrepresentations with respect to safety or efficacy of this product.

3 COMMUNICATION OF DMEPA 2 ANALYSIS

These findings were shared with OPDP. On February 8, 2023, OPDP did not identify any concerns that would render this suffix unacceptable. DMEPA 2 also communicated our findings to the Division of Oncology 3 (DO3) on February 10, 2023.

^a Mena-Grillasca, C. Nonproprietary Name Suffix Review for bevacizumab-tnjn (BLA 761198). Silver Spring (MD): FDA, CDER, OSE, OMEPRM, DMEPA (US); 2021 Aug 19. Nexus NPNS ID No.: 2020-45.

^b Lemery, S.J. Complete Response (BLA 761198). Silver Spring (MD): FDA, CDER, OND, DO3 (US); 2021 Nov 19.

^c Guidance for Industry: Nonproprietary Naming of Biological Products. 2017. Available from:

<http://www.fda.gov/downloads/Drugs/GuidanceComplianceRegulatoryInformation/Guidances/UCM459987.pdf>

4 CONCLUSION

We find the suffix -tnjn acceptable and recommend the nonproprietary name bevacizumab-tijn be used throughout the labels and labeling.

This is a representation of an electronic record that was signed electronically. Following this are manifestations of any and all electronic signatures for this electronic record.

1 INTRODUCTION

This review evaluates the proposed proprietary name, Avzivi, from a safety and misbranding perspective. The sources and methods used to evaluate the proposed proprietary name are outlined in the reference section and Appendix A, respectively. Bio-Thera submitted an external name study, conducted by (b) (4) for this proposed proprietary name.

1.1 REGULATORY HISTORY

Bio-Thera submitted BLA 761198 on November 27, 2020 and received a Complete Response letter on November 19, 2021^a. During that review cycle the applicant had been granted^b the conditionally acceptable name (b) (4) *** on April 23, 2021. On August 2, 2022 Bio-Thera submitted a proprietary name withdrawal letter^c to withdraw (b) (4) ***.

Thus, Bio-Thera submitted the name, Avzivi, for review on October 28, 2022.

1.2 PRODUCT INFORMATION

The following product information is provided in the proprietary name submission received on October 28, 2022.

- Intended Pronunciation: av zi' vee
- Nonproprietary Name: bevacizumab-ttjn
- Indication of Use:
 - For treatment of recurrent epithelial ovarian, fallopian tube or primary peritoneal cancer (rOC), persistent, recurrent or metastatic cervical cancer (CC), metastatic renal cell carcinoma (mRCC), glioblastoma (GBM), first-line non-squamous non-small cell lung cancer (NSCLC) and metastatic colorectal cancer (MCRC).
- Route of Administration: intravenous
- Dosage Form: injection
- Strength: 100 mg/4 mL (25 mg/mL) and 400 mg/16 mL (25 mg/mL)
- Dose and Frequency:

^a Lemery, S. Complete Response for BLA 761198, bevacizumab-xxxx. Silver Spring (MD): FDA, CDER, OSE (US); 2021 NOV 19.

^b Harris, D. Proprietary Name Request conditionally acceptable BLA 761198. Silver Spring (MD): FDA, CDER, OSE (US); 2021 APR 23.

^c Proprietary Name Withdrawal Request – withdraw conditionally accepted (b) (4) *** BLA 761198. Basking Ridge (NJ): Bio-Thera Solutions, Ltd.; 2022 AUG 02. Available from: EDR LINK.
<\\CDSESUB1\EVSPROD\bla761198\0023\m1\us\12-cover-letters\cover-letter-sn0023-withdrawal-of-proprietary-name-05aug2022.pdf>

- o The proposed usual dosage is 5, 10, or 15 mg/kg.
- o The proposed frequency of administration is every 2 to 3 weeks.
- o The proposed maximum daily dose is 20 mg/kg.
- How Supplied: Product will be available in single-use vials.
- Storage: Product should be refrigerated at 2°C to 8°C.
- Reference Listed Drug/Reference Product: Avastin; BLA 125085

2 RESULTS

The following sections provide information obtained and considered in the overall evaluation of the proposed proprietary name, Avzivi.

2.1 MISBRANDING ASSESSMENT

The Office of Prescription Drug Promotion (OPDP) determined that Avzivi would not misbrand the proposed product. The Division of Medication Error Prevention and Analysis 2 (DMEPA 2) concurred with the findings of OPDP's assessment for Avzivi. The Division of Oncology 3 (DO3) did not comment on the findings of OPDP's assessment for Avzivi.

2.2 SAFETY ASSESSMENT

The following aspects were considered in the safety evaluation of the proposed proprietary name, Avzivi.

2.2.1 *United States Adopted Names (USAN) Search*

There is no USAN stem present in the proposed proprietary name^d.

2.2.2 *Components of the Proposed Proprietary Name*

Bio-Thera did not provide a derivation or intended meaning for the proposed proprietary name, Avzivi, in their submission. This proprietary name is comprised of a single word that contains the letters 'iv', which is the abbreviation for the intravenous route of administration. Although we typically discourage the inclusion of medical abbreviations in proprietary names, we determined that the location of this abbreviation in the middle of the name, and the lack of prominence of this abbreviation makes it unlikely that the letters 'iv' within the proposed proprietary name, Avzivi, could lead to confusion in this case. Thus, we do not object to the proposed proprietary name Avzivi on the basis of this abbreviation.

2.2.3 *Comments from Other Review Disciplines at Initial Review*

The Division of Oncology 3 (DO3) did not forward any comments or concerns relating to Avzivi at the initial phase of the review.

^d USAN stem search conducted on November 3, 2022.

2.2.4 FDA Name Simulation Studies

Ninety (n=90) practitioners participated in DMEPA's prescription studies for Avzivi. The responses did not overlap with any currently marketed products nor did the responses sound or look similar to any currently marketed products or any products in the pipeline. Appendix B contains the results from the prescription simulation studies.

2.2.5 Phonetic and Orthographic Computer Analysis (POCA) Search Results

Our POCA search^e identified 37 names with a combined phonetic and orthographic score of $\geq 55\%$ or an individual phonetic or orthographic score $\geq 70\%$. These names are included in Table 1 below.

2.2.6 Names Retrieved for Review Organized by Name Pair Similarity

Table 1 lists the number of names retrieved from our POCA search, and (b) (4) external study. These name pairs are organized as highly similar, moderately similar or low similarity for further evaluation.

Table 1. Names Retrieved for Review Organized by Name Pair Similarity	
Similarity Category	Number of Names
Highly similar name pair: combined match percentage score $\geq 70\%$	0
Moderately similar name pair: combined match percentage score $\geq 55\%$ to $\leq 69\%$	37
Low similarity name pair: combined match percentage score $\leq 54\%$	6

2.2.7 Safety Analysis of Names with Potential Orthographic, Spelling, and Phonetic Similarities

Our analysis of the 43 names contained in Table 1 determined none of the names will pose a risk for confusion with Avzivi as described in Appendices C through H.

2.2.8 Communication of DMEPA's Determination

On January 23, 2023, DMEPA 2 communicated our determination to the Division of Oncology 3 (DO3).

3 CONCLUSION

The proposed proprietary name, Avzivi, is conditionally acceptable.

^e POCA search conducted on November 3, 2022 in version 5.1.

If you have any questions or need clarifications, please contact Latonia Ford, OSE project manager, at 301-796-4901.

3.1 COMMENTS TO BIO-THERA SOLUTIONS, LTD.

We have completed our review of the proposed proprietary name, Avzivi, and have concluded that this name is conditionally acceptable.

If any of the proposed product characteristics as stated in your submission, received on October 28, 2022 are altered prior to approval of the marketing application, the name must be resubmitted for review.

4 REFERENCES

1. **USAN Stems** (<https://www.ama-assn.org/about/united-states-adopted-names-approved-stems>)

USAN Stems List contains all the recognized USAN stems.

2. **Phonetic and Orthographic Computer Analysis (POCA)**

POCA is a system that FDA designed. As part of the name similarity assessment, POCA is used to evaluate proposed names via a phonetic and orthographic algorithm. The proposed proprietary name is converted into its phonemic representation before it runs through the phonetic algorithm. Likewise, an orthographic algorithm exists that operates in a similar fashion. POCA is publicly accessible.

Drugs@FDA

Drugs@FDA is an FDA Web site that contains most of the drug products approved in the United States since 1939. The majority of labels, approval letters, reviews, and other information are available for drug products approved from 1998 to the present. Drugs@FDA contains official information about FDA-approved *brand name* and *generic drugs*; *therapeutic biological products*, *prescription* and *over-the-counter* human drugs; and *discontinued drugs* (see Drugs @ FDA Glossary of Terms, available at http://www.fda.gov/Drugs/InformationOnDrugs/ucm079436.htm#ther_biological).

RxNorm

RxNorm contains the names of prescription and many OTC drugs available in the United States. RxNorm includes generic and branded:

- Clinical drugs – pharmaceutical products given to (or taken by) a patient with therapeutic or diagnostic intent
- Drug packs – packs that contain multiple drugs, or drugs designed to be administered in a specified sequence

Radiopharmaceuticals, contrast media, food, dietary supplements, and medical devices, such as bandages and crutches, are all out of scope for RxNorm

(<http://www.nlm.nih.gov/research/umls/rxnorm/overview.html>).

Division of Medication Errors Prevention and Analysis proprietary name consultation requests

This is a list of proposed and pending names that is generated by the Division of Medication Error Prevention and Analysis from the Access database/tracking system.

APPENDICES

Appendix A

FDA's Proprietary Name Risk Assessment evaluates proposed proprietary names for misbranding and safety concerns.

1. **Misbranding Assessment:** For prescription drug products, OPDP assesses the name for misbranding concerns. For over-the-counter (OTC) drug products, the misbranding assessment of the proposed name is conducted by DNDP. OPDP or DNDP evaluates proposed proprietary names to determine if the name is false or misleading, such as by making misrepresentations with respect to safety or efficacy. For example, a fanciful proprietary name may misbrand a product by suggesting that it has some unique effectiveness or composition when it does not (21 CFR 201.10(c)(3)). OPDP or DNDP provides their opinion to DMEPA for consideration in the overall acceptability of the proposed proprietary name.
2. **Safety Assessment:** The safety assessment is conducted by DMEPA, and includes the following:
 - a. Preliminary Assessment: We consider inclusion of USAN stems or other characteristics that when incorporated into a proprietary name may cause or contribute to medication errors (i.e., dosing interval, dosage form/route of administration, medical or product name abbreviations, names that include or suggest the composition of the drug product, etc.) See prescreening checklist below in Table 2*. DMEPA defines a medication error as any preventable event that may cause or lead to inappropriate medication use or patient harm while the medication is in the control of the health care professional, patient, or consumer.^f

^f National Coordinating Council for Medication Error Reporting and Prevention. <https://www.nccmerp.org/about-medication-errors> Last accessed 10/05/2020.

***Table 2- Prescreening Checklist for Proposed Proprietary Name**

	Answer the questions in the checklist below. Affirmative answers to any of these questions indicate a potential area of concern that should be carefully evaluated as described in this guidance.
Y/N	Is the proposed name obviously similar in spelling and pronunciation to other names?
	Proprietary names should not be similar in spelling or pronunciation to proprietary names, established names, or ingredients of other products.
Y/N	Are there inert or inactive ingredients referenced in the proprietary name?
	Proprietary names should not incorporate any reference to an inert or inactive ingredient in a way that might create an impression that the ingredient's value is greater than its true functional role in the formulation (21 CFR 201.10(c)(4)).
Y/N	Does the proprietary name include combinations of active ingredients?
	Proprietary names of fixed combination drug products should not include or suggest the name of one or more, but not all, of its active ingredients (see 21 CFR 201.6(b)).
Y/N	Is there a United States Adopted Name (USAN) stem in the proprietary name?
	Proprietary names should not incorporate a USAN stem in the position that USAN designates for the stem.
Y/N	Is this proprietary name used for another product that does not share at least one common active ingredient?
	Drug products that do not contain at least one common active ingredient should not use the same (root) proprietary name.
Y/N	Is this a proprietary name of a discontinued product?
	Proprietary names should not use the proprietary name of a discontinued product if that discontinued drug product does not contain the same active ingredients.

- b. Phonetic and Orthographic Computer Analysis (POCA): Following the preliminary screening of the proposed proprietary name, DMEPA staff evaluates the proposed name against potentially similar names. In order to identify names with potential similarity to the proposed proprietary name, DMEPA enters the proposed proprietary name in POCA and queries the name against the following drug reference databases, Drugs@fda, CernerRxNorm, and names in the review pipeline using a 55% threshold in POCA. DMEPA reviews the combined orthographic and phonetic matches and group the names into one of the following three categories:
- Highly similar pair: combined match percentage score $\geq 70\%$.
 - Moderately similar pair: combined match percentage score $\geq 55\%$ to $\leq 69\%$.

- Low similarity: combined match percentage score $\leq 54\%$.

Using the criteria outlined in the check list (Table 3-5) that corresponds to each of the three categories (highly similar pair, moderately similar pair, and low similarity), DMEPA evaluates the name pairs to determine the acceptability or non-acceptability of a proposed proprietary name. The intent of these checklists is to increase the transparency and predictability of the safety determination of whether a proposed name is vulnerable to confusion from a look-alike or sound-alike perspective. Each bullet below corresponds to the name similarity category cross-references the respective table that addresses criteria that DMEPA uses to determine whether a name presents a safety concern from a look-alike or sound-alike perspective.

- For highly similar names, differences in product characteristics often cannot mitigate the risk of a medication error, including product differences such as strength and dose. Thus, proposed proprietary names that have a combined score of ≥ 70 percent are at risk for a look-alike sound-alike confusion which is an area of concern (See Table 3).
- Moderately similar names are further evaluated to identify the presence of attributes that are known to cause name confusion.
 - Name attributes: We note that the beginning of the drug name plays a significant role in contributing to confusion. Additionally, drug name pairs that start with the same first letter and contain a shared letter string of at least 3 letters in both names are major contributing factor in the confusion of drug names⁸. We evaluate all moderately similar names retrieved from POCA to identify the above attributes. These names are further evaluated to identify overlapping or similar strengths or doses.
 - Product attributes: Moderately similar names of products that have overlapping or similar strengths or doses represent an area for concern for FDA. The dose and strength information is often located in close proximity to the drug name itself on prescriptions and medication orders, and the information can be an important factor that either increases or decreases the potential for confusion between similarly named drug pairs. The ability of other product characteristics to mitigate confusion (e.g., route, frequency, dosage form) may be limited when the strength or dose overlaps. DMEPA reviews such names further, to determine whether sufficient differences exist to prevent confusion. (See Table 4).
- Names with low similarity that have no overlap or similarity in strength and dose are generally acceptable (See Table 5) unless there are data to suggest that the name might be vulnerable to confusion (e.g., prescription simulation study suggests that the name is likely to be misinterpreted as a marketed product). In these instances, we would reassign

⁸ Shah, M, Merchant, L, Characteristics That May Help in the Identification of Potentially Confusing Proprietary Drug Names. Therapeutic Innovation & Regulatory Science, September 2016

a low similarity name to the moderate similarity category and review according to the moderately similar name pair checklist.

- c. FDA Prescription Simulation Studies: DMEPA staff also conducts a prescription simulation studies using FDA health care professionals.

Four separate studies are conducted within the Centers of the FDA for the proposed proprietary name to determine the degree of confusion of the proposed proprietary name with marketed U.S. drug names (proprietary and established) due to similarity in visual appearance with handwritten prescriptions, verbal pronunciation of the drug name or during computerized provider order entry. The studies employ healthcare professionals (pharmacists, physicians, and nurses), and attempts to simulate the prescription ordering process. The primary Safety Evaluator uses the results to identify vulnerability of the proposed name to be misinterpreted by healthcare practitioners during written, verbal, or electronic prescribing.

In order to evaluate the potential for misinterpretation of the proposed proprietary name during written, verbal, or electronic prescribing of the name, written inpatient medication orders, written outpatient prescriptions, verbal orders, and electronic orders are simulated, each consisting of a combination of marketed and unapproved drug products, including the proposed name.

- d. Comments from Other Review Disciplines: DMEPA requests the Office of New Drugs (OND) and/or Office of Generic Drugs (OGD), ONDQA or OBP for their comments or concerns with the proposed proprietary name, ask for any clinical issues that may impact the DMEPA review during the initial phase of the name review. Additionally, when applicable, at the same time DMEPA requests concurrence/non-concurrence with OPDP's decision on the name. The primary Safety Evaluator addresses any comments or concerns in the safety evaluator's assessment.

The OND/OGD Regulatory Division is contacted a second time following our analysis of the proposed proprietary name. At this point, DMEPA conveys their decision to accept or reject the name.

Additionally, other review disciplines opinions such as ONDQA or OBP may be considered depending on the proposed proprietary name.

When provided, DMEPA considers external proprietary name studies conducted by or for the Applicant/Sponsor and incorporates the findings of these studies into the overall risk assessment.

The DMEPA primary reviewer assigned to evaluate the proposed proprietary name is responsible for considering the collective findings, and provides an overall risk assessment of the proposed proprietary name.

Table 3. Highly Similar Name Pair Checklist (i.e., combined Orthographic and Phonetic score is $\geq 70\%$).

Answer the questions in the checklist below. Affirmative answers to some of these questions suggest that the pattern of orthographic or phonetic differences in the names may render the names less likely to confusion, provided that the pair does not share a common strength or dose.			
<u>Orthographic Checklist</u>		<u>Phonetic Checklist</u>	
Y/N	Do the names begin with different first letters? <i>Note that even when names begin with different first letters, certain letters may be confused with each other when scripted.</i>	Y/N	Do the names have different number of syllables?
Y/N	Are the lengths of the names dissimilar* when scripted? <i>*FDA considers the length of names different if the names differ by two or more letters.</i>	Y/N	Do the names have different syllabic stresses?
Y/N	Considering variations in scripting of some letters (such as z and f), is there a different number or placement of upstroke/downstroke letters present in the names?	Y/N	Do the syllables have different phonologic processes, such as vowel reduction, assimilation, or deletion?
Y/N	Is there different number or placement of cross-stroke or dotted letters present in the names?	Y/N	Across a range of dialects, are the names consistently pronounced differently?
Y/N	Do the infixes of the name appear dissimilar when scripted?		
Y/N	Do the suffixes of the names appear dissimilar when scripted?		

Table 4: Moderately Similar Name Pair Checklist (i.e., combined score is $\geq 55\%$ to $\leq 69\%$).

Step 1	Review the DOSAGE AND ADMINISTRATION and HOW SUPPLIED/STORAGE AND HANDLING sections of the prescribing information (or for OTC drugs refer to the Drug Facts label) to determine if strengths and doses of the name pair overlap or are very similar. Different strengths and doses for products whose names are moderately similar may decrease the risk of confusion between the moderately similar name pairs. Name pairs that have overlapping or similar strengths or doses have a higher potential for confusion and should be evaluated further (see Step 2). Because the strength or dose could be used to express an order or prescription for a particular drug product, overlap in one or both of these components would be reason for further evaluation. For single strength products, also consider circumstances where the strength may not be expressed. For any i.e. drug products comprised of more than one active ingredient, consider whether the strength or dose may be expressed using only one of the components. To determine whether the strengths or doses are similar to your proposed product, consider the following list of factors that may increase confusion: • Alternative expressions of dose: 5 mL may be listed in the prescribing information, but the dose may be expressed in metric weight (e.g., 500 mg) or in non-metric units (e.g., 1 tsp, 1 tablet/capsule). Similarly, a strength or dose of 1000 mg may be expressed, in practice, as 1 g, or vice versa. • Trailing or deleting zeros: 10 mg is similar in appearance to 100 mg which may potentiate confusion between a name pair with moderate similarity. • Similar sounding doses: 15 mg is similar in sound to 50 mg
Step 2	Answer the questions in the checklist below. Affirmative answers to some of these questions suggest that the pattern of orthographic or phonetic differences in the names may reduce the likelihood of confusion for moderately similar names <u>with</u> overlapping or similar strengths or doses.

	Orthographic Checklist (Y/N to each question) - Do the names begin with different first letters? Note that even when names begin with different first letters, certain letters may be confused with each other when scripted. - Are the lengths of the names dissimilar* when scripted? *FDA considers the length of names different if the names differ by two or more letters. - Considering variations in scripting of some letters (such as z and f), is there a different number or placement of upstroke/downstroke letters present in the names? - Is there different number or placement of cross-stroke or dotted letters present in the names? - Do the infixes of the name appear dissimilar when scripted? - Do the suffixes of the names appear dissimilar when scripted?	Phonetic Checklist (Y/N to each question) - Do the names have different number of syllables? - Do the names have different syllabic stresses? - Do the syllables have different phonologic processes, such vowel reduction, assimilation, or deletion? - Across a range of dialects, are the names consistently pronounced differently?
--	--	---

Table 5: Low Similarity Name Pair Checklist (i.e., combined score is $\leq 54\%$).

Names with low similarity are generally acceptable unless there are data to suggest that the name might be vulnerable to confusion (e.g., prescription simulation study suggests that the name is likely to be misinterpreted as a marketed product). In these instances, we would reassign a low similarity name to the moderate similarity category and review according to the moderately similar name pair checklist.

Appendix C: Highly Similar Names (e.g., combined POCA score is $\geq 70\%$)

No.	Proposed name: Avzivi Established name: bevacizumab-tjnj Dosage form: injection Strength(s): 100 mg/4 mL (25 mg/mL) and 400 mg/16 mL (25 mg/mL) Usual Dose: 5, 10, 15 or 20 mg/kg intravenous every 2 to 3 weeks.	POCA Score (%)	Orthographic and/or phonetic differences in the names sufficient to prevent confusion Other prevention of failure mode expected to minimize the risk of confusion between these two names.
1.	NA		

Appendix D: Moderately Similar Names (e.g., combined POCA score is $\geq 55\%$ to $\leq 69\%$) with no overlap or numerical similarity in Strength and/or Dose

No.	Name	POCA Score (%)
1.	Balziva	68
2.	Balziva-21	68
3.	Balziva-28	68
4.	Alvaiz	63
5.	Avinza	63
6.	Amvaz	61
7.	Evzio	61
8.	Advil	60
9.	(b) (4)***	58
10.	Avita	58
11.	Abreva	56
12.	Zovia 1/35	56
13.	Zovia 1/50	56

Appendix E: Moderately Similar Names (e.g., combined POCA score is $\geq 55\%$ to $\leq 69\%$) with overlap or numerical similarity in Strength and/or Dose

No.	Proposed name: Avzivi Established name: bevacizumab-tjnj Dosage form: injection Strength(s): 100 mg/4 mL (25 mg/mL) and 400 mg/16 mL (25 mg/mL) Usual Dose: 5, 10, 15 or 20 mg/kg intravenous every 2 to 3 weeks.	POCA Score (%)	Prevention of Failure Mode In the conditions outlined below, the following combination of factors, are expected to minimize the risk of confusion between these two names
1.	Ivizia	65	This name pair has sufficient orthographic and phonetic differences. Different starting letters ‘I’ vs. ‘A’ minimize the orthographic similarity. Additionally, Ivizia is single strength (5 mg/mL) compared to two strengths of Avzivi (100 mg/4 ml (25 mg/mL) and 400 mg/16 ml (25 mg/mL)). The differences in dose (1 to 2 eye drops vs. weight-based), frequency (daily as needed vs. every 2 to 3 weeks), dosage form (eye drops vs. injection), and route of administration (topical vs. intravenous) further minimize the risk of confusion between this name pair.
2.	Cablivi	64	This name pair has sufficient orthographic and phonetic differences.
3.	Laviv	62	This name pair has sufficient orthographic and phonetic differences. Laviv is an autologous cellular product consisting of fibroblasts harvested from the patient’s own skin. It is indicated for improvement of the appearance of moderate to severe nasolabial fold wrinkles in adults.
4.	(b) (4) ***	57	This name pair has sufficient orthographic and phonetic differences.
5.	(b) (4) ***	57	This name pair has sufficient phonetic differences.

No.	Proposed name: Avzivi Established name: bevacizumab-tbjn Dosage form: injection Strength(s): 100 mg/4 mL (25 mg/mL) and 400 mg/16 mL (25 mg/mL) Usual Dose: 5, 10, 15 or 20 mg/kg intravenous every 2 to 3 weeks.	POCA Score (%)	Prevention of Failure Mode In the conditions outlined below, the following combination of factors, are expected to minimize the risk of confusion between these two names
			(b) (4) When the above is considered in totality, we find the potential for name

No.	Proposed name: Avzivi Established name: bevacizumab-tbjn Dosage form: injection Strength(s): 100 mg/4 mL (25 mg/mL) and 400 mg/16 mL (25 mg/mL) Usual Dose: 5, 10, 15 or 20 mg/kg intravenous every 2 to 3 weeks.	POCA Score (%)	Prevention of Failure Mode In the conditions outlined below, the following combination of factors, are expected to minimize the risk of confusion between these two names
			confusion with this name pair to be minimal.
6.	Jivi	56	This name pair has sufficient orthographic and phonetic differences.
7.	Azlin	55	This name pair has sufficient orthographic and phonetic differences.

Appendix F: Low Similarity Names (e.g., combined POCA score is $\leq 54\%$)

No.	Name	POCA Score (%)
1.	Avandia	52
2.	Avastin	50
3.	Advicor	48
4.	Adzine	48
5.	Azilect	42
6.	Avaclyr	36

Appendix G: Names not likely to be confused or not used in usual practice settings for the reasons described.

No.	Name	POCA Score (%)	Failure preventions
1.	(b) (4)***	64	Name was found unacceptable by CBER's Advertising and Promotional Labeling Branch on January 25, 2016. BLA 125590 was approved on April 1, 2019 under the trade name, Asceniv.
2.	Avima	59	Name identified in RxNorm database. Unable to find product characteristics in commonly used drug databases.
3.	(b) (4) **	58	(b) (4)
4.	(b) (4)***	58	
5.	(b) (4)***	58	

Appendix H: Names not likely to be confused due to absence of attributes that are known to cause name confusion^h.

No.	Name	POCA Score (%)
1.	Vosevi	61
2.	(b) (4)***	61
3.	Vidaza	60
4.	(b) (4)***	58
5.	Evivo	58
6.	(b) (4)***	58
7.	Camcevi	57
8.	(b) (4)***	57
9.	Evkeeza	56
10.	Gazyva	56
11.	Tazverik	55
12.	Varizig	55
