APPROVAL LETTER
NDA 19-430/S-001

Survival Technology, Inc.
8101 Glenbrook Road
Bethesda, MD 20814

Attention: Ianthana Peterson
Senior Regulatory Specialist

Gentlemen:

The supplemental application provides for a change in the WARNINGS section of the package insert to alert the patient and physician to possible accidental injection into digits (S-001).

We have completed our review of the supplemental application and it is approved. We remind you that you must comply with the requirements set forth under 21 CFR 314.80 and 314.81 for approved new drugs.

Sincerely yours,

Philip G. Walters, M.D.

APPROVAL
Medical Officer's Review

Product- EpiPen and EpiPen Jr. (epinephrine)
Route of Administration- IM
Category of Drug- adrenergic agonist
Sponsor - Survival Technology, Inc.

Previous Medical Review- see MOR of 24 August 1988
Material Reviewed- Submission of 13 February 1989

I. In the MOR of 24 August 1988, we stated that: ".......an Emergency Physician in regard to a potential hazard associated with EpiPen.......reports two patients who developed loss of blood supply to the finger after an accidental injection into the finger." The reporter recommends that this "dangerous medical device" be taken off the market.

It is unlikely that individuals will accidentally inject this medication into the digits, despite these 2 case reports. Moreover, this is a life-saving medication for many patients with severe allergies and a history of anaphylaxis, and offers an advantage over injectable epinephrine which is not packaged in an auto-injectable form, because of the ease of its use. Some patients have difficulty administering themselves epinephrine from a syringe which is not auto-injectable during an anaphylactic reaction. On the other hand, the labeling should be changed to warn physicians administering and patients using this device that injections into the digits should be avoided, and what to do if such an event accidentally occurs.

We recommend that the Warnings Section be changed to include the following statement, "Accidental injection into the hands or feet may result in loss of blood flow to the affected area and should be avoided. If there is accidental injection into these areas go immediately to the nearest emergency room for treatment. EpiPen should only be injected into the thigh or upper arm at the sites indicated in the drawing. The sponsor should then prepare a drawing of the areas where it is appropriate to inject EpiPen."

II. As a result, in the letter of 6 September 1988 to the sponsor we stated that, "We have received two (2) reports of accidental injection of Epi-Pen into the fingers with potential loss of these digits due to decreased blood supply from vasoconstriction. Therefore, we are requesting that the labeling be changed to alert the patient and physician to this possible adverse event. In this regard, an addition to the Warnings Section should read "Accidental injection into the hands or feet may result in loss of blood flow to the affected area and should be avoided. If there is an accidental injection into these areas, go immediately to the nearest emergency room for treatment. Epi-Pen should only be injected into the thigh or upper arm at the sites indicated in the drawing below." You should prepare a drawing of the areas where it should be appropriate for Epi-Pen to be injected."
III. The sponsor has made the changes requested by us and the labeling is acceptable at this time.

IV. Proposed Draft of Clinical Portion of Letter to Sponsor:

We have reviewed the labeling changes submitted by you on 13 February 1989 and they are acceptable.

Previous Medical Review- see MOR of 3 Nov 1987

Material Reviewed- Letter to FDA from outside physician of 23 May 1988

I. This letter was sent by an Emergency Physician in regard to a potential hazard associated with EpiPen. He reports two patients who developed loss of blood supply to the finger after an accidental injection into the finger. The reporter recommends that this "dangerous medical device" be taken off the market.

II. It is unlikely that individuals will accidentally inject this medication into the digits, despite these 2 case reports. Moreover, this is a life-saving medication for many patients with severe allergies and a history of anaphylaxis, and offers an advantage over injectable epinephrine which is not packaged in an auto-injectable form, because of the ease of its use. Some patients have difficulty administering themselves epinephrine from a syringe which is not auto-injectable during an anaphylactic reaction. On the other hand, the labeling should be changed to warn physicians administering and patients using this device that injections into the digits should be avoided, and what to do if such an event accidentally occurs.

III. We recommend that the Warnings Section be changed to include the following statement, "Accidental injection into the hands or feet may result in loss of blood flow to the affected area and should be avoided. If there is accidental injection into these areas go immediately to the nearest emergency room for treatment. EpiPen should only be injected into the thigh or upper arm at the sites indicated in the drawing." The sponsor should then prepare a drawing of the areas where it is appropriate to inject EpiPen.

IV. Proposed Draft of Medical Portion of Letter to Sponsor:

We have received two (2) reports of accidental injection of EpiPen into the fingers with potential loss of these digits due to decreased blood supply from vasoconstriction. Therefore, we are requesting that the
labeling be changed to alert the patient and physician to this possible adverse event. In this regard, an addition to the Warnings Section should read, "Accidental injection into the hands or feet may result in loss of blood flow to the affected area and should be avoided. If there is accidental injection into these areas go immediately to the nearest emergency room for treatment. EpiPen should only be injected into the thigh or upper arm at the sites indicated in the drawing below." You should prepare a drawing of the areas where it would be appropriate for EpiPen to be injected.

Attention: Gary W. Leyland
Director
Regulatory Affairs

Gentlemen:

Please refer to your approved new drug application for Epi-Pen and Epi-Pen Jr. Auto-Injector (epinephrine injection).

We have received two (2) reports of accidental injection of Epi-Pen into the fingers with potential loss of these digits due to decreased blood supply from vasoconstriction. Therefore, we are requesting that the labeling be changed to alert the patient and physician to this possible adverse event. In this regard, an addition to the WARNINGS section should read, "Accidental injection into the hands or feet may result in loss of blood flow to the affected area and should be avoided. If there is an accidental injection into these areas, go immediately to the nearest emergency room for treatment. Epi-Pen should only be injected into the thigh or upper arm at the sites indicated in the drawing below." You should prepare a drawing of the areas where it would be appropriate for Epi-Pen to be injected.

This labeling change should be implemented during the next printing and submitted as a supplemental application to this NDA.

Sincerely yours,

Philip G. Walters, M.D.
