Active ingredient: Potassium Chloride

Form/Route: Extended Release Tablets/Oral

Recommended studies: 1 study

Type of study: Fasting
Design: Single-dose, two-way crossover in-vivo
Strength: 20 mEq X 4 tablets (80 mEq dose)
Subjects: Healthy males and nonpregnant females, general population.
Additional Comments: Please see specific recommendations regarding the fasting study in the guidance on Potassium Chloride Extended-Release Capsules.

Analytes to measure (in appropriate biological fluid): Potassium in Urine

Bioequivalence based on (90% CI): Baseline-adjusted potassium

Waiver request of in-vivo testing: 10 mEq and 15 mEq based on (i) acceptable bioequivalence study on the 20 mEq strength, (ii) acceptable in-vitro dissolution testing of all strengths, and (iii) proportional similarity of the formulations across all strengths.

Dissolution test method and sampling times:
Please note that a Dissolution Methods Database is available to the public at the OGD website at http://www.accessdata.fda.gov/scripts/cder/dissolution/. Please find the dissolution information for this product at this website. Please conduct comparative dissolution testing on 12 dosage units each of all strengths of the test and reference products. For scored tablets, please also conduct comparative dissolution testing on 12 half tablets each of all strengths of the test and reference products. Specifications will be determined upon review of the application.

In addition to the method above, for modified release products, dissolution profiles on 12 dosage units each of test and reference products generated using USP Apparatus I at 100 rpm and/or Apparatus II at 50 rpm in at least three dissolution media (pH 1.2, 4.5 and 6.8 buffer) should be submitted in the application. Agitation speeds may have to be increased if appropriate. It is acceptable to add a small amount of surfactant, if necessary. Please include early sampling times of 1, 2, and 4 hours and continue every 2 hours until at least 80% of the drug is released, to provide assurance against premature release of drug (dose dumping) from the formulation. Specifications will be determined upon review of the data submitted in the application.
