To Enroll New Patient

You have indicated that this patient is a patient who cannot become pregnant. The questions that follow will assign a risk category to this patient, based on the reproductive potential according to the requirements of the iPLEDGE REMS.

Before enrolling your patient in the iPLEDGE REMS, you must determine if this is a patient who cannot become pregnant.

Please note that

1. The patient is post-menopausal
2. The patient has undergone a surgical sterilization procedure
3. The patient has had a hysterectomy
4. The patient is currently in menopause
5. The patient is post-menopausal
6. The patient is a male who cannot become pregnant
7. The patient is a female who has not yet undergone surgery to sterilize
8. The patient is a female who has undergone a surgical sterilization procedure
9. The patient is a female with a diagnosis of Androgen Insensitivity Syndrome
10. The patient is a female who has undergone a hysterectomy
11. The patient is a male who cannot become pregnant

Please select the appropriate answer:

- [ ] Yes
- [ ] No

In my judgment, the patient should be enrolled in the iPLEDGE REMS.

Please acknowledge your understanding of the qualification criteria as presented in order to proceed with enrollment.

Prescriber Portal
Dear [Patient's Name],

I am writing to discuss your options for contraception, as you have requested this information. It is important to weigh the potential side effects of each method and determine which one is best suited for you. Please read through the following information and discuss your choices with me.

1. Intrauterine Contraceptive Devices (IUDs)
   - Pros: Long-lasting, reversible, and effective even if intercourse occurs after placement.
   - Cons: Requires a medical procedure for insertion and removal, and may cause side effects such as bleeding.

2. Contraceptive Pills
   - Pros: Flexible, easy to use, and effective if taken consistently.
   - Cons: Not suitable for women with certain medical conditions or who are at risk for certain health issues.

3. Contraceptive Rings
   - Pros: Easy to use and provides consistent protection.
   - Cons: May cause side effects such as bleeding or spotting.

4. Contraceptive Shots
   - Pros: Provides consistent protection for 3 months.
   - Cons: May cause side effects such as irregular bleeding.

5. Contraceptive Implants
   - Pros: Provides consistent protection for up to 3 years.
   - Cons: May cause side effects such as irregular bleeding or spotting.

6. Barrier Methods
   - Pros: Inexpensive and widely available.
   - Cons: Requires proper use and may not be effective for everyone.

7. Coitus Interruptus
   - Pros: No side effects, easy to use.
   - Cons: Not consistently effective and may not be suitable for everyone.

8. Copper IUD
   - Pros: Long-lasting, reversible, and effective even if intercourse occurs after placement.
   - Cons: Requires a medical procedure for insertion and removal, and may cause side effects such as bleeding.

9. Male Condom
   - Pros: Inexpensive and widely available.
   - Cons: Not consistently effective and may not be suitable for everyone.

Please let me know which method you are considering, and we can discuss the pros and cons further. I will provide you with the appropriate materials to help you make an informed decision.

Sincerely,
[Your Name]
