What is my role in the Mycophenolate REMS? [Click step to expand details.](#)

Step 1 - Document your training in the Mycophenolate REMS

You should become familiar with the increased risks of embryofetal toxicity associated with mycophenolate and the requirements of Mycophenolate REMS:

- First-trimester pregnancy loss
- Congenital malformations, especially
 - external ear
 - cleft lip and palate abnormalities
- Anomalies of
 - the distal limbs
 - heart
 - esophagus
 - kidney
 - and nervous system

As a prescriber of mycophenolate, you should document your training in the Mycophenolate REMS by completing a *Prescriber Training Confirmation Form* to document that you understand, and will comply with Mycophenolate REMS.

You can submit a *Prescriber Training Confirmation Form* to Mycophenolate REMS by one of several ways:

- Visit www.MycophenolateREMS.com and complete the online form
- Complete a hard copy and submit it via fax to 1-800-617-5768
- Complete a hard copy and mail/email it to:

Mycophenolate REMS
 200 Pinecrest Plaza
 Morgantown, WV 26505-8065
support@mycophenolatere.ms.com

- Call 1-800-617-8191

Step 2 - Educate Females of Reproductive Potential

Step 3 - Check Pregnancy Status

Step 4 - Report any pregnancies to the Mycophenolate Pregnancy Registry

DATA INSIGHTS

In December 2006, the National Transplantation Pregnancy Registry (NTPR) published data from prospective cases where 24 female transplant patients reported 33 mycophenolate-exposed pregnancies*. Of these pregnancies, there were:

- 15 spontaneous abortions (45%)
- 18 live-born infants

Four of the 18 live-born infants had structural malformations (22%).

Of the 77 females exposed to systemic mycophenolate during pregnancy that were reported in postmarketing data†:

- 25 had spontaneous abortions
- 14 had a malformed fetus or infant, of which six had ear abnormalities

While available data are limited, structural malformations occur in approximately 20% of live-born infants exposed in utero to mycophenolate. First trimester pregnancy loss rates have been reported to be approximately 45%†.

Program Resources and Educational Materials

The Mycophenolate REMS provides the resources and educational materials you and your patients need to understand your roles and responsibilities in the program.

There are three ways to obtain REMS materials:

1. **ONLINE** – You can order the materials online. [To Order Online, click here](#)
2. **BY PHONE** – You can order materials by calling the Mycophenolate REMS call center at 1-800-617-8191.
3. **VIEW, PRINT, OR SAVE ON YOUR COMPUTER** – You can view, print, or save the materials to your computer. Select items from the list below.

Your REMS Materials:

Patient Information Brochure: What You Need To Know About Mycophenolate

- For prescribers to give to female patients of reproductive potential
- Contains the tools and materials to help patients understand the components of the Mycophenolate REMS

- 15 spontaneous abortions (45%)
- 18 live-born infants

Four of the 18 live-born infants had structural malformations (22%).

Of the 77 females exposed to systemic mycophenolate during pregnancy that were reported in postmarketing data†:

- 25 had spontaneous abortions
- 14 had a malformed fetus or infant, of which six had ear abnormalities

While available data are limited, structural malformations occur in approximately 20% of live-born infants exposed in utero to mycophenolate. First trimester pregnancy loss rates have been reported to be approximately 45%†.

What is my role in the Mycophenolate REMS? [Click step to expand details.](#)

Step 1 - Document your training in the Mycophenolate REMS

Step 2 - Educate Females of Reproductive Potential

- Educate females about the increased risks of mycophenolate exposure during pregnancy. Discuss the increased risks of miscarriage and birth defects associated with exposure to mycophenolate during pregnancy with females of reproductive potential before initiating treatment.

The information you share in this discussion will be reinforced by the *Patient Information Brochure: What You Need To Know About Mycophenolate*.

- Provide females of reproductive potential with a *Patient Information Brochure: What You Need To Know About Mycophenolate*.

Patients need to understand:

- the increased risks of miscarriage and birth defects while using mycophenolate
- their birth control options
- their role in the Mycophenolate REMS

- Provide pregnancy planning education.

Advise patients using mycophenolate to let you know if they are considering pregnancy. For a patient considering pregnancy,

Determine whether there are appropriate treatment options with less potential for embryofetal toxicity.

It is important to optimize the patient's underlying medical condition(s) and nutritional status prior to conception.

Refer patients for pre-conceptional counseling and high risk obstetrical care as needed and coordinate care among the patient's established providers.

- Provide contraception counseling.

Unless patients choose not to have sexual intercourse with a man at any time (abstinence), you must instruct them to always use acceptable contraception.

- During entire treatment with mycophenolate
- For 6 weeks after they stop taking mycophenolate

The following table lists the forms of contraception that are acceptable for use during treatment with mycophenolate. Guide your patients to choose from the following birth control options:

[Print](#)

ACCEPTABLE BIRTH CONTROL OPTIONS	
Guide your patients to choose from the following birth control options for use during treatment with mycophenolate:	
<p>Option 1 Use Method Alone</p> <ul style="list-style-type: none"> Pick one item from (A) Most effective: Less than 1 pregnancy per 100 women in one year 	<p>A</p>
<p>Option 2 Use Hormone & Barrier</p> <ul style="list-style-type: none"> Pick one item from (B) and one item from (C1) or (C2) 4-7 pregnancies per 100 women in one year 	<p>B</p>
<p>Option 3 Use Two Barriers</p> <ul style="list-style-type: none"> Pick one item from (C1) and one from (C2) Least effective: 13 or more pregnancies per 100 women in one year 	<p>C</p>

Note: Mycophenolate reduces blood levels of the hormones in the oral contraceptive pill and could theoretically reduce its effectiveness. Therefore, an additional barrier method of contraception must be used with all hormonal methods. For complete safety information, please see Prescribing Information, including boxed WARNING and Medication Guide, which can be found at [MycophenolateREMS.com](#)

*** Females of reproductive potential includes girls who have entered puberty and all women who have a uterus and ovaries and have not passed through menopause.**

Note: Mycophenolate reduces blood levels of the hormones in the oral contraceptive pill and could theoretically reduce its effectiveness. Therefore, an additional barrier method of contraception must be used with all hormonal methods.

EMERGENCY CONTRACEPTION

- Patients should also be counseled on the availability of emergency contraception in the event they have intercourse without acceptable contraception or their contraceptive method fails.

Step 3 - Check Pregnancy Status

Step 4 - Report any pregnancies to the Mycophenolate Pregnancy Registry

Do prescribers have to be trained in the Mycophenolate REMS in order to prescribe mycophenolate-containing products?
 Healthcare providers are not required to complete the *Prescriber Training Confirmation Form* in order to prescribe mycophenolate-containing medicines. However, healthcare providers who prescribe mycophenolate-containing medicines will be contacted by the Mycophenolate REMS and encouraged to become trained. This training could include reading the *Prescribing Information* and the *Healthcare Provider Brochure* or attending an accredited continuing education (CE) training program. As part of the REMS, the manufacturers of mycophenolate products have provided unrestricted grants to support CME/CE activities regarding risks associated with mycophenolate use during pregnancy. **A full list of CME/CE providers can be found on this website.**

What is my role in the Mycophenolate REMS? *Click step to expand details.*

Step 1 - Document your training in the Mycophenolate REMS

Step 2 - Educate Females of Reproductive Potential

Step 3 - Check Pregnancy Status

- You must determine if females of reproductive potential are pregnant:
- One pregnancy test with a sensitivity of at least 25 mIU/mL should be done immediately before starting mycophenolate
 - Another pregnancy test with the same sensitivity should be done 8 to 10 days later
 - Repeat pregnancy tests should be performed at routine follow-up visits
 - Results of all pregnancy tests should be discussed with the patient

In the event of a positive pregnancy test, patients should continue to take mycophenolate until a discussion can take place on the increased risks and benefits of mycophenolate treatment with the patient.

The patient should be apprised of the potential hazard of the fetus.

In certain situations, you and the patient may decide that the maternal benefits outweigh the increased risks to the fetus.

Step 4 - Report any pregnancies to the Mycophenolate Pregnancy Registry

Do prescribers have to be trained in the Mycophenolate REMS in order to prescribe mycophenolate-containing products?

Healthcare providers are not required to complete the *Prescriber Training Confirmation Form* in order to prescribe mycophenolate-containing medicines. However, healthcare providers who prescribe mycophenolate-containing medicines will be contacted by the Mycophenolate REMS and encouraged to become trained. This training could include reading the *Prescribing Information* and the *Healthcare Provider Brochure* or attending an accredited continuing education (CE) training program. As part of the REMS, the manufacturers of mycophenolate products have provided unrestricted grants to support CME/CE activities regarding risks associated with mycophenolate use during pregnancy. **A full list of CME/CE providers can be found on this website.**

- 2 **Step 2 - Educate Females of Reproductive Potential**
- 3 **Step 3 - Check Pregnancy Status**
- 4 **Step 4 - Report any pregnancies to the Mycophenolate Pregnancy Registry**

The Mycophenolate Pregnancy Registry has been established to evaluate mycophenolate-exposed pregnancies and their outcomes. These data will provide an opportunity to learn more about mycophenolate exposure in utero.

Instruct patients to tell you if they become pregnant during treatment with mycophenolate or within 6 weeks following discontinuation of treatment.

If you learn that a patient is pregnant:

- Report the pregnancy to the Mycophenolate Pregnancy Registry
 - By phone: 1-800-617-8191
 - Online by clicking this link [Report a Pregnancy](#).
 - Or by mail: UBC
200 Pinecrest Plaza,
Morgantown, WV 26505-8065

Patients should be informed that you will report any pregnancies of which you become aware to the Mycophenolate Pregnancy Registry. Provision of patient contact and medical information to the Mycophenolate Pregnancy Registry is covered by a HIPAA waiver.

- Encourage the patient to participate in the Mycophenolate Pregnancy Registry and encourage patients to read the [Mycophenolate Pregnancy Registry Frequently Asked Questions for Patients](#) on this website

INFORMATION FOR PATIENTS

I take mycophenolate, what do I need to know and do? *Click an item below to expand details.*

Understanding the increased risks of taking mycophenolate during pregnancy

If you are a girl or woman who can get pregnant, your doctor will talk with you about the increased risks of mycophenolate during pregnancy.

You need to learn about the following risks of mycophenolate in pregnancy:

- Higher risk of miscarriage during the first 3 months.
- Higher risk that the baby may be born with the birth defects:
 - Defects of the ears
 - Cleft lip or cleft palate
 - Defects of the arms, legs, heart, esophagus, kidney, and nervous system

INFORMATION FOR PATIENTS

I take mycophenolate, what do I need to know and do? *Click an item below to expand details*

Understanding the increased risks of taking mycophenolate during pregnancy

Do I need to use birth control?

You must always use acceptable birth control:

- During your entire treatment with mycophenolate
- For 6 weeks after you stop taking mycophenolate

Unless you choose not to have sexual intercourse with a man at any time (abstinence), you must always use acceptable forms of birth control.

What are my birth control options?

[Print](#)

ACCEPTABLE BIRTH CONTROL OPTIONS

Talk with your doctor and pick from the following birth control options during treatment with mycophenolate.

Option 1 Use Method Alone Pick one item from (A) ▶ Most effective: Less than 1 pregnancy per 100 women in one year	A	 Intrauterine Device (IUD)	 Tubal Sterilization	 Vasectomy		
Option 2 Use Hormone & Barrier Pick one item from (B) and one item from (C1) or (C2) shown below ▶ 4-7 pregnancies per 100 women in one year	B	 Progesterone Only Injection	 Birth Control Pill	 Birth Control (Progesterone) Patch	 Vaginal Ring	 Progesterone Only Implant
Option 3 Use Two Barriers Pick one item from (C1) and one from (C2) ▶ Least effective: 13 or more pregnancies per 100 women in one year	C	1 Female Condom	 Male Condom			
		2 Female Diaphragm with Spermicide	 Female Birth Control Sponge	 Cervical Cap with Spermicide		

To learn more about all the risks of taking mycophenolate, please see the Medication guide, which can be found at mycophenolateREMS.com

You may need to use more than one method of birth control at the same time.

- If you use an intrauterine device (IUD), had sterilization surgery (had your tubes tied or blocked), or if your partner has had a vasectomy, you do not need to use a second form of birth control.

Mycophenolate could make hormone methods of birth control not work as well.

- Studies show that mycophenolate lowers blood levels of certain hormones in the birth control pill.
- It is possible that birth control pills may not work as well when you take mycophenolate and you could become pregnant.
- It is possible that other hormone methods (like the patch, the ring, the shot, and the implant) may also not work well and you could become pregnant.
- It is important that a barrier method of birth control is also used with any hormone method of birth control.

DATA INSIGHTS

In December 2006, the National Transplantation Pregnancy Registry (NTPR) published data from prospective cases where 24 female transplant patients reported 33 mycophenolate-exposed pregnancies*. Of these pregnancies, there were:

- 15 spontaneous abortions (45%)
- 18 live-born infants

Four of the 18 live-born infants had structural malformations (22%).

Of the 77 females exposed to systemic mycophenolate during pregnancy that were reported in postmarketing data†:

- 25 had spontaneous abortions
- 14 had a malformed fetus or infant, of which six had ear abnormalities

While available data are limited, structural malformations occur in approximately 20% of live-born infants exposed in utero to mycophenolate. First trimester pregnancy loss rates have been reported to be approximately 45%*†.

➔ **Step 1 - Understand the Increased Risks of Mycophenolate Use During Pregnancy**

You should become familiar with the increased risks of embryofetal toxicity associated with mycophenolate:

- First-trimester pregnancy loss
- Congenital malformations, especially
 - external ear
 - cleft lip and palate abnormalities
- Anomalies of
 - the distal limbs
 - heart
 - esophagus
 - kidney
 - and nervous system

➔ **Step 2 - Counsel Females of Reproductive Potential**

➔ **Step 3 - Report Pregnancies**

What do I need to know about the Mycophenolate REMS? Click step to expand details.

- Step 1 - Understand the Increased Risks of Mycophenolate Use During Pregnancy**
- Step 2 - Counsel Females of Reproductive Potential**

Counsel these patients:
With your involvement, we can improve patient understanding and reduce the number of unplanned pregnancies in women taking mycophenolate.

Discuss the following with females of reproductive potential:

- The increased risks of miscarriage and birth defects while taking mycophenolate.
- Pregnancy tests should be conducted before and during mycophenolate treatment.
- Birth control needs to be used while taking mycophenolate, and for 6 weeks after stopping treatment, to avoid pregnancy.
- Pregnancy planning needs to be discussed with a healthcare provider if a patient wishes to become pregnant during mycophenolate treatment.

The following table lists the forms of contraception that are acceptable for use during treatment with mycophenolate.

[Print](#)

ACCEPTABLE BIRTH CONTROL OPTIONS

Guide your patients to choose from the following birth control options for use during treatment with mycophenolate:

Option	Requirement	Effectiveness	Methods
Option 1 Use Method Alone	Pick one item from (A)	Most effective: Less than 1 pregnancy per 100 women in one year	Intrauterine Device (IUD), Tubal Sterilization, Vasectomy
Option 2 Use Hormone & Barrier	Pick one item from (B) and one item from (C1) or (C2) shown below	4-7 pregnancies per 100 women in one year	Progesterone Only Injection, Birth Control Pill, Birth Control (Progesterone) Patch, Vaginal Ring, Progesterone Only Implant
Option 3 Use Two Barriers	Pick one item from (C1) and one from (C2)	Least effective: 13 or more pregnancies per 100 women in one year	Female Condom, Male Condom, Female Diaphragm with Spermicide, Female Birth Control Sponge, Cervical Cap with Spermicide

†††† Mycophenolate induces blood levels of the hormones in the oral contraceptive pill and could theoretically reduce its effectiveness. Therefore, an additional barrier method of contraception must be used with all hormonal methods. For complete safety information, please see Prescribing Information, including boxed WARNING and Medication Guide, which can be found at MycophenolateREMS.com

* Females of reproductive potential includes girls who have entered puberty and all women who have a uterus and ovaries and have not passed through menopause.

Note: Mycophenolate reduces blood levels of the hormones in the oral contraceptive pill and could theoretically reduce its effectiveness. Therefore, an additional barrier method of contraception must be used with all hormonal methods.

EMERGENCY CONTRACEPTION

- Patients should also be counseled on the availability of emergency contraception in the event they have intercourse without acceptable contraception or their contraceptive method fails.

Step 3 - Report Pregnancies

MYCOPHENOLATE PREGNANCY REGISTRY

What is the Mycophenolate Pregnancy Registry?

The Mycophenolate Pregnancy Registry is a way to collect information about pregnancies in female patients taking mycophenolate or within 6 weeks of stopping treatment. Females taking mycophenolate while they are pregnant have a higher risk of miscarriage in the first 3 months. There is also a higher risk that the baby will have birth defects.

Who should report a pregnancy to the Mycophenolate Pregnancy Registry?

- **Healthcare Professionals** - Report pregnancies to the Mycophenolate Pregnancy Registry using one of the 2 ways below.
- **Patients** - Tell your doctor if you get pregnant. Do not stop taking your mycophenolate medicine. Your doctor should report the pregnancy to the Mycophenolate Pregnancy Registry.

How do I report a pregnancy to the Mycophenolate Pregnancy Registry?

There are 2 ways to report a pregnancy:

1. **BY PHONE** – You can call the Mycophenolate Pregnancy Registry at 1-800-617-8191
2. **ONLINE** – You can provide your contact information online to the Mycophenolate Pregnancy Registry. Someone from the Mycophenolate Pregnancy Registry will then contact you to confirm necessary healthcare information.

What should be reported to the Mycophenolate Pregnancy Registry?

Any pregnancy, planned or unplanned, that occurs:

- While taking mycophenolate or
- Within 6 weeks after stopping treatment.

For more information about the Mycophenolate Pregnancy Registry, click one of the links below:

[Patient FAQs](#)
[Prescriber FAQs](#)

I have more questions, where can I get answers?

You can:

- Talk to someone by calling 1-800-617-8191 and selecting the Mycophenolate Pregnancy Registry menu option.

Patients

Frequently Asked Questions (FAQs) Page

Accessed from Main menu links

FREQUENTLY ASKED QUESTIONS

Patients

- What is the Mycophenolate REMS ?

The Mycophenolate REMS has been designed to tell you about the risks of taking mycophenolate during pregnancy. Females taking mycophenolate while they are pregnant have a higher risk of miscarriage in the first 3 months. There is also a higher risk that the baby will have birth defects.

- Do I have to register in the Mycophenolate REMS as a patient?

Patients do not register in the Mycophenolate REMS.

If you become pregnant during treatment with mycophenolate or within 6 weeks after stopping treatment with mycophenolate, you should inform your doctor and participate in the Mycophenolate Pregnancy Registry. Participation is voluntary; however, the information you provide is important to the success of the program.

The Mycophenolate Pregnancy Registry collects information about pregnancies that occur during treatment with mycophenolate or within 6 weeks after stopping. The information from the Registry helps doctors and patients understand the effects of mycophenolate on pregnant females and their babies.

- Do I have to go to a certain pharmacy to get my prescription filled in the Mycophenolate REMS?

You can fill your prescription in any pharmacy.

- What forms of birth control should I use while taking mycophenolate?

You should talk with your doctor about what birth control is right for you. You can also get birth control information in the *Patient Information Brochure: What You Need To Know About Mycophenolate* brochure. This brochure is available from your doctor or can be viewed on this website.

If you are taking mycophenolate, and you are able to get pregnant, you must always use acceptable birth control:

- During your entire treatment with mycophenolate
- For 6 weeks after you stop taking mycophenolate

Unless you choose not to have sexual intercourse with a man at any time (abstinence), you must always use acceptable birth control.

- Where can I find more information about birth control options?

Talk with your doctor about birth control and what is best for you. You can also get birth control information in the *Patient Information Brochure: What You Need To Know About Mycophenolate* brochure. This brochure is available from your doctor and can also be viewed on this website.

- Where can I find more information about drugs and birth defects?

It is best if you talk with your doctor about your medicines and birth defects.

- What type of data is collected by the Mycophenolate Pregnancy Registry and who will see the data?

You can find information on the Registry on this website.

The Registry collects information about pregnancies that occur during treatment with mycophenolate or within 6 weeks after stopping. The information from the Registry helps doctors and patients understand the effects of mycophenolate on pregnant females and their babies.

The Registry reports information about an individual female's pregnancy to the maker of the mycophenolate medicine she took. The maker of the drug is required by the law to report the pregnancy to the government.

Summary information (without patient identifiers) may also be shared among makers of mycophenolate medicine who support the Mycophenolate REMS. They may choose to publish it in scientific journals.

- Where can I find more information about emergency contraception?

You can also contact Planned Parenthood at 1-800-230-PLAN (1-800-230-7526), online at www.plannedparenthood.org or text "PPNOW" to 774636 (PPINFO) to get answers (standard message and data rates may apply).

- How do I get more information about the Mycophenolate REMS?

You can talk with your doctor for more information.

- What if I become pregnant while on a mycophenolate containing medicine or after I stop taking a mycophenolate containing medicine?

If you get pregnant while taking mycophenolate or within 6 weeks after you stop, call your doctor right away. **Do not** stop taking your mycophenolate. Your doctor will talk with you about taking part in the Mycophenolate Pregnancy Registry.

- What is the Mycophenolate Pregnancy Registry?

The Registry collects information about pregnancies that occur during treatment with mycophenolate or within 6 weeks after stopping. The information from the Registry helps doctors and patients understand the effects of mycophenolate on pregnant females and their babies.

- Why should I take part in the Mycophenolate Pregnancy Registry?

The information you provide to the Registry will help us better understand the effects of mycophenolate in pregnancy.

When you take part in the Registry, you provide important information that may help you and other females who took mycophenolate during their pregnancies. Females taking mycophenolate while they are pregnant have a higher risk of miscarriage in the first 3 months. There is also a higher risk that the baby will have birth defects.

- Who can take part in the Mycophenolate Pregnancy Registry?

All females who are pregnant while taking the following medicines and all females who get pregnant within 6 weeks after stopping treatment:

- CellCept® (mycophenolate mofetil)
- Myfortic® (mycophenolic acid)
- Generic mycophenolate mofetil
- Generic mycophenolic acid

Tell your doctor right away if you get pregnant. Your doctor should report your pregnancy to the Registry. We encourage you to take part in the Registry. The information you provide to the Registry will help us better understand the effects of mycophenolate in pregnancy. All the information you provide will be kept private.

- What will I need to do if I participate in the Mycophenolate Pregnancy Registry?

There are a few simple steps to take.

1. Tell your doctor if you get pregnant
 - The Registry will contact you after speaking with your doctor.
2. Complete an *Informed Consent* form
 - The *Informed Consent* form will be mailed to you with a pre-addressed postage-paid return envelope.
 - The form tells you what to expect with the Registry. It tells you what your rights are.
 - By signing, you allow the Registry to ask you questions about your health and your baby's health. The Registry will also ask for information from your doctors.
3. Answer questions about your health and your baby's health
 - After the first 3 months of pregnancy.
 - 2 more times during the next 6 months of pregnancy.
 - At the time of expected delivery.
 - When your baby is 2 months, 6 months and 1 year.
4. Let the Registry know if your contact information changes
 - The Registry relies on your information to contact you.
 - If your contact information changes, please call 1-800-617-8191.

- What are my rights as a participant in the Mycophenolate Pregnancy Registry?

- You can quit at any time.
- Your privacy is protected.

- Whom can I contact for more information?

- Call 1-800-617-8191 and choose "Mycophenolate Pregnancy Registry" from the menu

- Are there other side effects that I should know about with a mycophenolate containing medicine?

For information on side effects, you can talk with your doctor, ask your pharmacist, read the mycophenolate Medication Guide or the Prescribing Information (PI).

- How should I store a mycophenolate containing medicine?

- Store your medication at room temperature (59°F to 86°F).
- Make sure the container is tightly closed.
- Keep mycophenolate and all medicines out of the reach of children.

- In addition to pregnancy, what should I avoid while taking mycophenolate?

For information on what to avoid when taking mycophenolate, talk with your doctor, ask your pharmacist, read the mycophenolate Medication Guide or the Prescribing Information (PI).

- How do I handle internet browser issues?

If you are experiencing browser issues, your browser (i.e., Microsoft Internet Explorer, Mozilla Firefox, or Apple Safari) may be blocking the Mycophenolate REMS site, or parts of the Mycophenolate REMS site. You can resolve this by

1. Disabling the pop-up blocker completely every time you need to use the site, or
2. Adding www.MycophenolateREMS.com into your browser's list of allowed sites.

If this does not resolve the issue, it is recommended that you use Internet Explorer 8.0.

- What materials will I receive from my doctor?

- *Patient Information Brochure: What You Need To Know About Mycophenolate*
This Brochure tells you what you need to know about the Mycophenolate REMS. It explains how the program works and what your role is.
- *Mycophenolate Pregnancy Registry Frequently Asked Questions for Patients*
Provides answers to frequently asked questions about the Registry.

▪ **Prescribers**

- **Who is the Mycophenolate REMS for?**

Mycophenolate REMS is designed to help inform prescribers, nurses, pharmacists, and females of reproductive potential of the risks associated with exposure to mycophenolate during pregnancy.

- **Who can participate in the Mycophenolate Pregnancy Registry?**

- **Why is the Mycophenolate Pregnancy Registry important?**

Exposure to mycophenolate during pregnancy is associated with:

- Increased risks of pregnancy loss during the first trimester
- Higher risk of congenital malformations
 - Ear abnormalities such as microtia
 - Facial deformities, including cleft lip and palate
 - Anomalies of the distal limbs, heart, esophagus, kidney, and nervous system

The Mycophenolate Pregnancy Registry will collect data to characterize the risks associated with exposure to mycophenolate during pregnancy or within 6 weeks following discontinuation of treatment, regardless of indication. There is no limit to the number or type of physicians and/or patients who may contribute data to the Mycophenolate Pregnancy Registry. All reports of potential maternal and fetal exposure to mycophenolate will be considered for the Mycophenolate Pregnancy Registry.

The success of the Mycophenolate Pregnancy Registry depends on the participation of both patients and healthcare providers. Healthcare providers should identify patients who are currently pregnant or who may have been exposed to mycophenolate while pregnant, inform them of the Mycophenolate Pregnancy Registry, and encourage them to participate in the Mycophenolate Pregnancy Registry. Healthcare providers should report any pregnancy that may involve exposure to mycophenolate, whether or not the patient chooses to participate. Patients should be informed that you will report any pregnancies of which you become aware to the Mycophenolate Pregnancy Registry.

- **What is my role in the Mycophenolate Pregnancy Registry?**

Instruct patients to tell you if they get pregnant during treatment with mycophenolate or within 6 weeks following discontinuation of treatment. If you learn that a patient is pregnant.

- Report the pregnancy to the Mycophenolate Pregnancy Registry
- Encourage the patient to participate in the Mycophenolate Pregnancy Registry and encourage patients to read the *Mycophenolate Pregnancy Registry Frequently Asked Questions for Patients* on this website

When you report an eligible pregnancy to the Mycophenolate Pregnancy Registry, you should provide your contact information. Also provide the Mycophenolate Pregnancy Registry with information about the pregnancy and the patient's contact information so that she can be called for follow-up for this safety study. Provision of patient contact and medical information to the Mycophenolate Pregnancy Registry is covered by an HIPAA waiver.

When patients participate in the Mycophenolate Pregnancy Registry, they agree to provide information about their pregnancy, including information about prenatal drug exposure of any duration, maternal demography and history, and maternal and fetal outcomes of pregnancies exposed to mycophenolate. Patients are encouraged to participate in the Mycophenolate Pregnancy Registry as soon as their pregnancy is known, preferably in the first trimester.

- **After I report my patient's pregnancy, what will her participation involve?**

The patient will be asked in telephone interviews to answer questions regarding her health and her baby's health. These interviews will take place during each trimester of pregnancy; near the expected time of delivery or at pregnancy outcome; and when the infant reaches 2 months, 6 months, and 1 year of age. Since the Mycophenolate Pregnancy Registry relies on being able to contact the patient, it is important for you to advise her to keep the Mycophenolate Pregnancy Registry informed of any changes to her contact information throughout her participation.

- **After I enroll my patient, what is my role?**

You will be asked to provide pregnancy and outcomes data on a paper-based case report form (CRF) and submit it via mail or fax, or enter the data into an electronic data capture (EDC) system. You must keep the Mycophenolate Pregnancy Registry informed of any changes to your contact information throughout your participation.

- **How will data collected by the Mycophenolate Pregnancy Registry be analyzed and reported?**

The Mycophenolate Pregnancy Registry program administrator will report personally identifiable pregnancy data to the appropriate drug manufacturer for purposes of reporting to regulatory agencies as required by law. Aggregated de-identified data may be shared among participating applicants of Mycophenolate REMS and/or submitted for publication in peer-reviewed scientific journals.

- **Do I still report pregnancies to the National Transplantation Pregnancy Registry (NTPR)?**

All pregnancies occurring during treatment with mycophenolate or within 6 weeks following discontinuation of treatment should be reported to the Mycophenolate Pregnancy Registry, regardless of indication, for inclusion and follow-up. In addition to reporting exposed pregnancies to the Mycophenolate Pregnancy Registry, you may also report pregnancies to the NTPR.

- **How can I obtain more information?**

- Visit www.MycophenolateREMS.com
- Call 1-800-617-8191

- **What information is collected when a pregnancy is registered?**

The Mycophenolate REMS Pregnancy Registry actively collects information on all pregnancies that occur during treatment or within 6 weeks of stopping treatment with Mycophenolate. For newly reported and ongoing pregnancies, questions are asked at baseline, first, 2nd, and 3rd trimesters, at time of expected delivery and at infant ages 2, 6, and 12 months. Data elements include but are not limited to:

- Demographics
- Mycophenolate exposure including dose and timing of exposure
- Maternal and fetal outcomes
- Root cause analysis (understand the circumstances that led to the fetal exposure)
- Frequency of educational counseling
- Infant development to age 12 months

▪ **Pharmacists**

- **Do pharmacies have to register with the program?**

No. Pharmacies do not register in the Mycophenolate REMS. Pharmacies are required to provide patients with the medication guide for a particular mycophenolate product when dispensing the drug.

- **Does a pharmacy have to do anything special before filling a prescription?**

The only requirement for pharmacies in the Mycophenolate REMS is to provide the patient with a medication guide when dispensing mycophenolate.

- **How can I order more medication guides?**

Additional medication guides can be ordered over the phone (1-800-617-8191).

- **Will Mycophenolate REMS patients have a special card or ID Number?**

No. Patients in the Mycophenolate REMS do not have cards or ID numbers.

- **Can I accept mycophenolate prescriptions by phone, fax or email?**

Yes. The Mycophenolate REMS does not affect a pharmacy's policy on how a prescription is received. You can accept a mycophenolate prescription by any means you would accept any other prescriptions.

- **What information is collected when a pregnancy is registered?**

The Mycophenolate REMS Pregnancy Registry actively collects information on all pregnancies that occur during treatment or within 6 weeks of stopping treatment with Mycophenolate. For newly reported and ongoing pregnancies, questions are asked at baseline, first, 2nd, and 3rd trimesters, at time of expected delivery and at infant ages 2, 6, and 12 months. Data elements include but are not limited to:

- Demographics
- Mycophenolate exposure including dose and timing of exposure
- Maternal and fetal outcomes
- Root cause analysis (understand the circumstances that led to the fetal exposure)
- Frequency of educational counseling
- Infant development to age 12 months

For completed pregnancies, the available information on the pregnancy outcome will be captured and any infant follow-up

▪ **Email**

- **Add Mycophenolate REMS to your safe senders**

Listed below are steps to help with receiving emails from Mycophenolate REMS.

Because email clients differ, and spam filters sometimes filter legitimate email, Mycophenolate REMS suggests you add the Mycophenolate REMS domain to your Safe Senders list in your email client. This will minimize the chance that you'll miss Mycophenolate REMS emails.

For Outlook 2000 and Higher

1. Open the email from Mycophenolate REMS.
2. Click on the "Actions" menu on the top of your email window.
3. Choose "Junk Email."
4. Select "Add Senders Domain...to Safe Senders List" to add Mycophenolate REMS to your safe sender list.

Or Follow These Steps

1. Open the email from Mycophenolate REMS.
2. Right-click Mycophenolate REMS email address.
3. Click "Add to Contacts" in the short-cut menu.
4. Click "Save and Close."

Outlook Express (6+)

1. Open the email from Mycophenolate REMS.
2. Left-click Mycophenolate REMS icon, or right-click Mycophenolate REMS name.
3. Click "Add to Contacts."
4. Click "Save and Close."

AOL 9.0

1. Open the email from Mycophenolate REMS.
2. Click the "Add Address" icon.
3. Verify Mycophenolate REMS contact information.
4. Save it.

AOL WebMail

1. Open the email from Mycophenolate REMS.
2. Click on Mycophenolate REMS name and email address.
3. Click "Add to Address Book" in the window that appears.
4. Enter extra information as needed.
5. Click "Save."

Earthlink

1. Open the email from Mycophenolate REMS.
2. Click "Add to Address Book" in the email header.
3. Use the "Address Book Editor" to verify Mycophenolate REMS contact details, and click "Save."

Entourage

1. Open the email from Mycophenolate REMS.
2. Right-click Mycophenolate REMS email address.
3. Select "Add to Address Book" in the short-cut menu.
4. Verify Mycophenolate REMS contact details.
5. Click "Save."

Gmail

1. Open the email from Mycophenolate REMS.
2. Click "More Options" in the email header.
3. Click "Add Sender to Contacts List."

Hotmail

1. Open the email from Mycophenolate REMS.
2. Click "Save Address" in the toolbar.
3. Verify Mycophenolate REMS contact details.
4. Click "ok."

* Users may also white-list Mycophenolate REMS entire domain (everything behind the @ sign) using the "Safe List" feature under Options -> Mail -> Junk Email Protection.

Yahoo!

1. Open the email from Mycophenolate REMS.
2. Click "Add to Address Book" to the right, next to Mycophenolate REMS name.
3. Verify Mycophenolate REMS contact details.
4. Click "Add to Address Book."

MacMail

1. Open the email from Mycophenolate REMS.
2. Ctr-click Mycophenolate REMS email address and select "Open in Address Book."
3. Verify Mycophenolate REMS contact details.

For CME/CE Community

Accessed from Main menu links

FOR THE CME/CE COMMUNITY

Accredited REMS CME/CE Activities for Mycophenolate

The goal of the Mycophenolate REMS is to mitigate the risk of embryofetal toxicity associated with the use of mycophenolate by:

1. Educating healthcare providers on the following:
 - The increased risks of first trimester pregnancy loss and congenital malformations associated with exposure to mycophenolate during pregnancy.
 - The need to counsel females of reproductive potential on the importance of pregnancy prevention and planning when taking mycophenolate.
 - The need to report pregnancies to the Mycophenolate Pregnancy Registry.
2. Informing females of reproductive potential who are prescribed mycophenolate about:
 - The increased risks of pregnancy loss (miscarriage) and birth defects
 - The importance of pregnancy prevention and planning when taking mycophenolate.

Links

[\[Year\] Request for Application \(RFA\)](#)

As part of the Mycophenolate REMS, the Mycophenolate Applicants must provide education for healthcare providers who prescribe and/or participate in the treatment of patients taking mycophenolate products.

The FDA has developed a FDA Blueprint for the Mycophenolate REMS, which contains a high-level outline of the core educational messages that must be addressed in the educational programs developed under the Mycophenolate REMS. The core messages, which are directed to healthcare providers who prescribe and/or participate in the treatment of patients taking mycophenolate products, include:

- The increased risks of miscarriage and birth defects associated with mycophenolate.
- Importance of educating females of reproductive potential about the increased risk of miscarriage and birth defects associated with exposure to mycophenolate during pregnancy.
- Importance of prescribers providing or facilitating patient education about pregnancy prevention and planning, including acceptable methods of contraception during mycophenolate treatment.
- When treating a pregnant patient or a patient who is considering pregnancy, consider alternative immunosuppressants with less potential for embryofetal toxicity
- Importance of reporting to the Mycophenolate Pregnancy Registry any pregnancies that occur during mycophenolate treatment or within 6 weeks following discontinuation of treatment.
- Importance of encouraging pregnant patients to participate in the Mycophenolate Pregnancy Registry.
- Importance of obtaining a signed Patient-Prescriber Acknowledgement Form from each female of reproductive potential.

In order to expand the educational reach of training on the Mycophenolate REMS, the Mycophenolate Applicants will make available Request for Applications (RFA) for independent commercially-supported educational grants. If the submission window for a given grant cycle is open, the RFA will be available in the right column of this webpage, which includes additional details related to the submission of a grant application. Additionally, a list of Mycophenolate Applicants-supported accredited CME/CE activities and the accredited CME/CE Providers offering the activity can be referenced below:

Program Title	Accredited CME/CE Provider

The Mycophenolate Applicants attest that this table will be populated once grants are approved.

PRESCRIBER TRAINING

Prescriber Training Confirmation

Read and acknowledge the following statements:

The FDA determined that a REMS (Risk Evaluation and Mitigation Strategy) is necessary to ensure that the benefits of mycophenolate outweigh the increased risks of first trimester pregnancy loss and congenital malformations associated with mycophenolate use during pregnancy.

Mycophenolate is available by prescription as

- CellCept® (mycophenolate mofetil)
- Myfortic® (mycophenolic acid)
- Generic mycophenolate mofetil
- Generic mycophenolic acid

As a prescriber of mycophenolate to female patients of reproductive potential,* I understand that I complete this Training Confirmation Form to document my training in the Mycophenolate REMS. This training could include reading the *Prescribing Information* and the *Healthcare Provider Brochure* or attending an accredited continuing education (CE) training program. As part of the REMS, the manufacturers of mycophenolate products have provided independent commercially-supported educational grants to support CME/CE activities regarding risks associated with mycophenolate use during pregnancy. A full list of CME/CE providers can be found on www.MycophenolateREMS.com.

*A female of reproductive potential includes girls who have entered puberty and all females who have a uterus and have not passed through menopause.

I have agreed to do the following:

1. Read and understand the *Prescribing Information* for mycophenolate and the *Healthcare Provider Brochure*. Consider enrolling in an accredited CME/CE activity to further understand your role in the treatment of patients taking mycophenolate products. A full list of CME/CE providers can be found on www.MycophenolateREMS.com.
2. Understand the increased risks of first trimester pregnancy loss and congenital malformations associated with mycophenolate.
3. Educate females of reproductive potential on the risks associated with exposure to mycophenolate during pregnancy.
4. Provide the *Patient Information Brochure: What You Need To Know About Mycophenolate* booklet to females of reproductive potential.
5. Provide contraceptive counseling to patients directly or by partnering with an OB/GYN.
6. Only prescribe mycophenolate to a pregnant patient if the benefits of initiating or continuing mycophenolate treatment outweigh the risk of fetal harm.
7. Discuss alternative treatments to mycophenolate with females of reproductive potential who are pregnant or considering pregnancy.
8. Follow the pregnancy testing recommendations as outlined in the *Prescribing Information* for mycophenolate and the *Healthcare Provider Brochure*.
9. Report to the Mycophenolate Pregnancy Registry any pregnancies that occur during mycophenolate treatment or within 6 weeks following discontinuation of treatment. Encourage pregnant patients to participate in the Mycophenolate Pregnancy Registry.

I understand that I may be contacted in the future for items pertaining to the administration of the Mycophenolate REMS.

I acknowledge that by completing this Prescriber Training Confirmation Form I attest to follow the Mycophenolate REMS requirements outlined above.

DATA INSIGHTS

In December 2006, the National Transplantation Pregnancy Registry (NTPR) published data from prospective cases where 24 female transplant patients reported 33 mycophenolate-exposed pregnancies*. Of these pregnancies, there were:

- 15 spontaneous abortions (45%)
- 18 live-born infants

Four of the 18 live-born infants had

MYCOPHENOLATE REMS

RISKS OF FIRST TRIMESTER PREGNANCY LOSS
AND CONGENITAL DEFECTS

[Prescriber
Overview](#)

[Patient
Overview](#)

[FAQs](#)

WELCOME

What is the Mycophenolate REMS?

The Mycophenolate REMS is designed to help reduce the risk of miscarriage and birth defects associated with the use of mycophenolate during pregnancy. It is a risk reduction strategy.

What are the risks of mycophenolate during pregnancy?

- Higher risk of miscarriage
- Higher risk that the baby will have birth defects.

Who should be informed about the Mycophenolate REMS?

Prescribers

For Prescriber Overview,

Patients

For Patient Overview,
[click here](#)

Other Healthcare Professionals

For Other Healthcare
Professionals, [click here](#)

What is the goal of the Mycophenolate REMS?

The goal of the Mycophenolate REMS is to mitigate the risk of embryofetal toxicity associated with the use of mycophenolate during pregnancy by:

- Educating healthcare providers on the following:
 - The increased risks of miscarriage and birth defects associated with exposure to mycophenolate during pregnancy
 - The need to counsel females of reproductive potential on the importance of pregnancy prevention and planning when taking mycophenolate
 - The need to report pregnancies to the Mycophenolate Pregnancy Registry.
- Informing females of reproductive potential who are prescribed mycophenolate about:
 - The increased risks of pregnancy loss (miscarriage) and birth defects
 - The importance of pregnancy prevention and planning when taking mycophenolate

What medications contain mycophenolate?

Mycophenolate Mofetil
CellCept® by Cellego USA, Inc.

Mycophenolic Acid
Myfortic® by Novartis Pharmaceuticals

[FAQs](#)

WELCOME TO THE MYCOPHENOLATE REMS (Risk Evaluation and Mitigation Strategy)

What is the Mycophenolate REMS?

The Mycophenolate REMS is a program to tell doctors, nurses, pharmacists, and patients about the increased risks of taking mycophenolate during pregnancy. It was required by the Food and Drug Administration (FDA).

What are the risks of mycophenolate during pregnancy?

- Higher risk of miscarriage in the first 3 months.
- Higher risk that the baby will have birth defects.

Who should be informed about the Mycophenolate REMS?

Prescribers

INFORMATION FOR PRESCRIBERS

What is my role in the Mycophenolate REMS? *Click step to expand details.*

Step 1 - Document your training in the Mycophenolate REMS

You should become familiar with the increased risks of embryofetal toxicity associated with mycophenolate and the requirements of Mycophenolate REMS:

- First-trimester pregnancy loss
- Congenital malformations, especially
 - external ear
 - cleft lip and palate abnormalities
- Anomalies of
 - the distal limbs
 - heart
 - esophagus
 - kidney
 - and nervous system

As a prescriber of mycophenolate, you should document your training in the Mycophenolate REMS by completing a *Prescriber Training Confirmation Form* to document that you understand, and will comply with Mycophenolate REMS.

You can submit a *Prescriber Training Confirmation Form* to Mycophenolate REMS by one of several ways:

- Visit www.MycophenolateREMS.com and complete the online form
- Complete a hard copy and submit it via fax to 1-800-617-5768
- Complete a hard copy and mail/email it to:

Mycophenolate REMS
200 Pinecrest Plaza
Morgantown, WV 26505-8065
support@mycophenolateREMS.com

- Call 1-800-617-8191

Step 2 - Educate Females of Reproductive Potential

Step 3 - Check Pregnancy Status

Step 4 - Report any pregnancies to the Mycophenolate Pregnancy Registry

Prescriber Training

To view the Healthcare Provider Brochure, and document your training, [click here](#).

DATA INSIGHTS

In December 2006, the National Transplantation Pregnancy Registry (NTPR) published data from prospective cases where 24 female transplant patients reported 33 mycophenolate-exposed pregnancies*. Of these pregnancies, there were:

- 15 spontaneous abortions (45%)
- 18 live-born infants

Four of the 18 live-born infants had structural malformations (22%).

Of the 77 females exposed to systemic mycophenolate during pregnancy that were reported in postmarketing data†:

- 25 had spontaneous abortions
- 14 had a malformed fetus or infant, of which six had ear abnormalities

While available data are limited, structural malformations occur in approximately 20% of live-born infants exposed in utero to mycophenolate. First trimester pregnancy loss rates have been reported to be approximately 45%†.

Do prescribers have to be trained in the Mycophenolate REMS in order to prescribe mycophenolate-containing products?

Healthcare providers are not required to complete the *Prescriber Training Confirmation Form* in order to prescribe mycophenolate-containing medicines. However, healthcare providers who prescribe mycophenolate-containing medicines will be contacted by the Mycophenolate REMS and encouraged to become trained. This training could include reading the *Prescribing Information* and the *Healthcare Provider Brochure*.

Program Resources and Educational Materials

The Mycophenolate REMS provides the resources and educational materials you and your patients need to understand your roles and responsibilities in the program.

There are three ways to obtain REMS materials:

1. ONLINE – You can order the materials online. [To Order Online, click here](#)
2. BY PHONE – You can order materials by calling the Mycophenolate REMS call center at 1-800-617-8191.
3. VIEW, PRINT, OR SAVE ON YOUR COMPUTER – You can view, print, or save the materials to your computer. Select items from the list below.

Your REMS Materials:

Patient Information Brochure: What You Need To Know About Mycophenolate

- For prescribers to give to female patients of reproductive potential
- Contains the tools and materials to help patients understand the components of the Mycophenolate REMS

[View to Print or Save](#) | [Order](#)

Healthcare Provider Brochure

- For prescribers
- Contains information on the risks associated with exposure to mycophenolate during pregnancy, the components of the Mycophenolate REMS, and what you can do to help ensure the successful implementation of the program

[View to Print or Save](#) | [Order](#)

Dear Healthcare Provider (DHCP) Letter

- For prescribers
- Contains important information about the Mycophenolate REMS

†Prescribing Information for mycophenolate.

INFORMATION FOR PRESCRIBERS

What is my role in the Mycophenolate REMS? [Click step to expand details.](#)

Step 1 - Document your training in the Mycophenolate REMS

Step 2 - Educate Females of Reproductive Potential

- Educate females about the increased risks of mycophenolate exposure during pregnancy. Discuss the increased risks of miscarriage and birth defects associated with exposure to mycophenolate during pregnancy with females of reproductive potential before initiating treatment.

The information you share in this discussion will be reinforced by the *Patient Information Brochure: What You Need To Know About Mycophenolate*.

- Provide females of reproductive potential with a *Patient Information Brochure: What You Need To Know About Mycophenolate*.

Patients need to understand:

- the increased risks of miscarriage and birth defects while using mycophenolate
- their birth control options
- their role in the Mycophenolate REMS

- Provide pregnancy planning education.

Advise patients using mycophenolate to let you know if they are considering pregnancy. For a patient considering pregnancy,

Determine whether there are appropriate treatment options with less potential for embryofetal toxicity.

It is important to optimize the patient's underlying medical condition(s) and nutritional status prior to conception.

Refer patients for pre-conceptional counseling and high risk obstetrical care as needed and coordinate care among the patient's established providers.

- Provide contraception counseling.

Unless patients choose not to have sexual intercourse with a man at any time (abstinence), you must instruct them to always use acceptable contraception.

- During entire treatment with mycophenolate
- For 6 weeks after they stop taking mycophenolate

The following table lists the forms of contraception that are acceptable for use during treatment with mycophenolate. Guide your patients to choose from the following birth control options:

[Print](#)

ACCEPTABLE BIRTH CONTROL OPTIONS

Guide your patients to choose from the following birth control options for use during treatment with mycophenolate:

<p>Option 1 Use Method Alone</p> <ul style="list-style-type: none"> Pick one item from (A) Most effective: Less than 1 pregnancy per 100 women in one year 	<p>A</p>
<p>Option 2 Use Hormone & Barrier</p> <ul style="list-style-type: none"> Pick one item from (B) and one item from (C1) or (C2) shown below 4-7 pregnancies per 100 women in one year 	<p>B</p>
<p>Option 3 Use Two Barriers</p> <ul style="list-style-type: none"> Pick one item from (C1) and one from (C2) Least effective: 13 or more pregnancies per 100 women in one year 	<p>C</p>

Note: Mycophenolate reduces blood levels of the hormones in the oral contraceptive pill and could theoretically reduce its effectiveness. Therefore, an additional barrier method of contraception must be used with all hormonal methods. For complete details regarding acceptable birth control options, please see Prescribing Information, including Section 10.0 (2) and the Medication Guide, which can be found at [MycophenolateREMS.com](#)

* Females of reproductive potential includes girls who have entered puberty and all women who have a uterus and ovaries and have not passed through menopause.

Note: Mycophenolate reduces blood levels of the hormones in the oral contraceptive pill and could theoretically reduce its effectiveness. Therefore, an additional barrier method of contraception must be used with all hormonal methods.

EMERGENCY CONTRACEPTION

- Patients should also be counseled on the availability of emergency contraception in the event they have intercourse without acceptable contraception or their contraceptive method fails.

Step 3 - Check Pregnancy Status

Step 4 - Report any pregnancies to the Mycophenolate Pregnancy Registry

Do prescribers have to be trained in the Mycophenolate REMS in order to prescribe mycophenolate-containing products?

Healthcare providers are not required to complete the *Prescriber Training Confirmation Form* in order to prescribe mycophenolate-containing medicines. However, healthcare providers who prescribe mycophenolate-containing medicines will be contacted by the Mycophenolate REMS and encouraged to become trained. This training could include reading the *Prescribing Information* and the *Healthcare Provider Brochure*.

Program Resources and Educational Materials

†Prescribing Information for mycophenolate.

INFORMATION FOR PRESCRIBERS

What is my role in the Mycophenolate REMS? [Click step to expand details.](#)

Step 1 - Document your training in the Mycophenolate REMS

Step 2 - Educate Females of Reproductive Potential

Step 3 - Check Pregnancy Status

You must determine if females of reproductive potential are pregnant:

- One pregnancy test with a sensitivity of at least 25 mIU/mL should be done immediately before starting mycophenolate
- Another pregnancy test with the same sensitivity should be done 8 to 10 days later
- Repeat pregnancy tests should be performed at routine follow-up visits
- Results of all pregnancy tests should be discussed with the patient

In the event of a positive pregnancy test, patients should continue to take mycophenolate until a discussion can take place on the increased risks and benefits of mycophenolate treatment with the patient.

The patient should be apprised of the potential hazard of the fetus.

In certain situations, you and the patient may decide that the maternal benefits outweigh the increased risks to the fetus.

Step 4 - Report any pregnancies to the Mycophenolate Pregnancy Registry

INFORMATION FOR PRESCRIBERS

What is my role in the Mycophenolate REMS? *Click step to expand details.*

- ➔ **Step 1 - Document your training in the Mycophenolate REMS**
- ➔ **Step 2 - Educate Females of Reproductive Potential**
- ➔ **Step 3 - Check Pregnancy Status**
- ➔ **Step 4 - Report any pregnancies to the Mycophenolate Pregnancy Registry**

The Mycophenolate Pregnancy Registry has been established to evaluate mycophenolate-exposed pregnancies and their outcomes. These data will provide an opportunity to learn more about mycophenolate exposure in utero.

Instruct patients to tell you if they become pregnant during treatment with mycophenolate or within 6 weeks following discontinuation of treatment.

If you learn that a patient is pregnant:

- Report the pregnancy to the Mycophenolate Pregnancy Registry
 - By phone: 1-800-617-8191
 - Online by clicking this link [Report a Pregnancy](#).
 - Or by mail: UBC
200 Pinecrest Plaza,
Morgantown, WV 26505-8065

Patients should be informed that you will report any pregnancies of which you become aware to the Mycophenolate Pregnancy Registry. Provision of patient contact and medical information to the Mycophenolate Pregnancy Registry is covered by a HIPAA waiver.

- Encourage the patient to participate in the Mycophenolate Pregnancy Registry and encourage patients to read the [Mycophenolate Pregnancy Registry Frequently Asked Questions for Patients](#) on this website

INFORMATION FOR PATIENTS

I take mycophenolate, what do I need to know and do? *Click an item below to expand details.*

Understanding the increased risks of taking mycophenolate during pregnancy

If you are a girl or woman who can get pregnant, your doctor will talk with you about the increased risks of mycophenolate during pregnancy.

You need to learn about the following risks of mycophenolate in pregnancy:

- Higher risk of miscarriage during the first 3 months.
- Higher risk that the baby may be born with the birth defects:
 - Defects of the ears
 - Cleft lip or cleft palate
 - Defects of the arms, legs, heart, esophagus, kidney, and nervous system

INFORMATION FOR PATIENTS

I take mycophenolate, what do I need to know and do? *Click an item below to expand details.*

Understanding the increased risks of taking mycophenolate during pregnancy

Do I need to use birth control?

You must always use acceptable birth control:

- During your entire treatment with mycophenolate
- For 6 weeks after you stop taking mycophenolate

Unless you choose not to have sexual intercourse with a man at any time (abstinence), you must always use acceptable forms of birth control.

What are my birth control options?

[Print](#)

ACCEPTABLE BIRTH CONTROL OPTIONS

Talk with your doctor and pick from the following birth control options during treatment with mycophenolate.

Option 1 Use Method Alone Pick one item from (A) Most effective: Less than 1 pregnancy per 100 women in one year	A Intrauterine Device (IUD) Tubal Sterilization Vasectomy
Option 2 Use Hormone & Barrier Pick one item from (B) and one item from (C1) or (C2) shown below 4-7 pregnancies per 100 women in one year	B Progesterone Only Injection Birth Control Pill Birth Control (Progesterone) Patch Vaginal Ring Progesterone Only Implant
Option 3 Use Two Barriers Pick one item from (C1) and one from (C2) Least effective: 13 or more pregnancies per 100 women in one year	C 1 Female Condom Male Condom 2 Female Diaphragm with Spermicide Female Birth Control Sponge Cervical Cap with Spermicide

To learn more about all the risks of taking mycophenolate, please see the Medication guide, which can be found at MycophenolateREMS.com

You may need to use more than one method of birth control at the same time.

- If you use an intrauterine device (IUD), had sterilization surgery (had your tubes tied or blocked), or if your partner has had a vasectomy, you do not need to use a second form of birth control.

Mycophenolate could make hormone methods of birth control not work as well.

- Studies show that mycophenolate lowers blood levels of certain hormones in the birth control pill.
- It is possible that birth control pills may not work as well when you take mycophenolate and you could become pregnant.
- It is possible that other hormone methods (like the patch, the ring, the shot, and the implant) may also not work well and you could become pregnant.
- It is important that a barrier method of birth control is also used with any hormone method of birth control.

DATA INSIGHTS

In December 2006, the National Transplantation Pregnancy Registry (NTPR) published data from prospective cases where 24 female transplant patients reported 33 mycophenolate-exposed pregnancies*. Of these pregnancies, there were:

- 15 spontaneous abortions (45%)
- 18 live-born infants

Four of the 18 live-born infants had structural malformations (22%).

Of the 77 females exposed to systemic mycophenolate during pregnancy that were reported in postmarketing data†:

- 25 had spontaneous abortions
- 14 had a malformed fetus or infant, of which six had ear abnormalities

While available data are limited, structural malformations occur in approximately 20% of live-born infants exposed in utero to mycophenolate. First trimester pregnancy loss rates have been reported to be approximately 45%*†.

INFORMATION FOR OTHER HEALTHCARE PROFESSIONALS

What do I need to know about the Mycophenolate REMS? [Click step to expand details.](#)

Step 1 - Understand the Increased Risks of Mycophenolate Use During Pregnancy

You should become familiar with the increased risks of embryofetal toxicity associated with mycophenolate:

- First-trimester pregnancy loss
- Congenital malformations, especially
 - external ear
 - cleft lip and palate abnormalities
- Anomalies of
 - the distal limbs
 - heart
 - esophagus
 - kidney
 - and nervous system

Step 2 - Counsel Females of Reproductive Potential

Step 3 - Report Pregnancies

DATA INSIGHTS

In December 2006, the National Transplantation Pregnancy Registry (NTPR) published data from prospective cases where 24 female transplant patients reported 33 mycophenolate-exposed pregnancies*. Of these pregnancies, there were:

- 15 spontaneous abortions (45%)
- 18 live-born infants

Four of the 18 live-born infants had structural malformations (22%).

†Prescribing Information for mycophenolate.

INFORMATION FOR OTHER HEALTHCARE PROFESSIONALS

What do I need to know about the Mycophenolate REMS? [Click step to expand details.](#)

Step 1 - Understand the Increased Risks of Mycophenolate Use During Pregnancy

Step 2 - Counsel Females of Reproductive Potential

Counsel these patients:

With your involvement, we can improve patient understanding and reduce the number of unplanned pregnancies in women taking mycophenolate.

Discuss the following with females of reproductive potential:

- The increased risks of miscarriage and birth defects while taking mycophenolate.
- Pregnancy tests should be conducted before and during mycophenolate treatment.
- Birth control needs to be used while taking mycophenolate, and for 6 weeks after stopping treatment, to avoid pregnancy.
- Pregnancy planning needs to be discussed with a healthcare provider if a patient wishes to become pregnant during mycophenolate treatment.

The following table lists the forms of contraception that are acceptable for use during treatment with mycophenolate.

[Print](#)

ACCEPTABLE BIRTH CONTROL OPTIONS

Guide your patients to choose from the following birth control options for use during treatment with mycophenolate:

Option 1 Use Method Alone Pick one item from (A) ▶ Most effective: Less than 1 pregnancy per 100 women in one year	A	 Intrauterine Device (IUD)	 Tubal Sterilization	 Vasectomy		
Option 2 Use Hormone & Barrier Pick one item from (B) and one item from (C1) or (C2) shown below ▶ 4-7 pregnancies per 100 women in one year	B	 Progesterone Only Injection	 Birth Control Pill	 Birth Control (Progesterone) Patch	 Vaginal Ring	 Progesterone Only Implant
Option 3 Use Two Barriers Pick one item from (C1) and one from (C2) ▶ Least effective: 13 or more pregnancies per 100 women in one year	C	1 Female Condom	2 Male Condom	1 Female Diaphragm with Spermicide	2 Female Birth Control Sponge	3 Cervical Cap with Spermicide

Note: Mycophenolate reduces blood levels of the hormones in the oral contraceptive pill and could theoretically reduce its effectiveness. Therefore, an additional barrier method of contraception must be used with all hormonal methods. For complete safety information, please see Prescribing Information, including Revised WARNING and Medication Guide, which can be found at [MycophenolateREMS.com](#)

* Females of reproductive potential includes girls who have entered puberty and all women who have a uterus and ovaries and have not passed through menopause.

Note: Mycophenolate reduces blood levels of the hormones in the oral contraceptive pill and could theoretically reduce its effectiveness. Therefore, an additional barrier method of contraception must be used with all hormonal methods.

EMERGENCY CONTRACEPTION

- Patients should also be counseled on the availability of emergency contraception in the event they have intercourse without acceptable contraception or their contraceptive method fails.

Step 3 - Report Pregnancies

DATA INSIGHTS

In December 2006, the National Transplantation Pregnancy Registry (NTPR) published data from prospective cases where 24 female transplant patients reported 33 mycophenolate-exposed pregnancies*. Of these pregnancies, there were:

- 15 spontaneous abortions (45%)
- 18 live-born infants

Four of the 18 live-born infants had structural malformations (22%).

Of the 77 females exposed to systemic mycophenolate during pregnancy that were reported in postmarketing data†:

- 25 had spontaneous abortions
- 14 had a malformed fetus or infant, of which six had ear abnormalities

While available data are limited, structural malformations occur in approximately 20% of live-born infants exposed in utero to mycophenolate. First trimester pregnancy loss rates have been reported to be approximately 45%*†.

MYCOPHENOLATE PREGNANCY REGISTRY

What is the Mycophenolate Pregnancy Registry?

The Mycophenolate Pregnancy Registry is a way to collect information about pregnancies in female patients taking mycophenolate or within 6 weeks of stopping treatment. Females taking mycophenolate while they are pregnant have a higher risk of miscarriage in the first 3 months. There is also a higher risk that the baby will have birth defects.

Patients

I am a pregnant patient, please contact me.

Healthcare Professionals

I am a healthcare professional, please contact me.

Who should report a pregnancy to the Mycophenolate Pregnancy Registry?

- **Healthcare Professionals** - Report pregnancies to the Mycophenolate Pregnancy Registry using one of the 2 ways below.
- **Patients** - Tell your doctor if you get pregnant. Do not stop taking your mycophenolate medicine. Your doctor should report the pregnancy to the Mycophenolate Pregnancy Registry.

How do I report a pregnancy to the Mycophenolate Pregnancy Registry?

There are 2 ways to report a pregnancy:

1. **BY PHONE** – You can call the Mycophenolate Pregnancy Registry at 1-800-617-8191
2. **ONLINE** – You can provide your contact information online to the Mycophenolate Pregnancy Registry. Someone from the Mycophenolate Pregnancy Registry will then contact you to confirm necessary healthcare information.

What should be reported to the Mycophenolate Pregnancy Registry?

Any pregnancy, planned or unplanned, that occurs:

- While taking mycophenolate or
- Within 6 weeks after stopping treatment.

For more information about the Mycophenolate Pregnancy Registry, click one of the links below:

[Patient FAQs](#)

[Prescriber FAQs](#)

I have more questions, where can I get answers?

You can:

- Talk to someone by calling 1-800-617-8191 and selecting the Mycophenolate Pregnancy Registry menu option.

Frequently Asked Questions (FAQs) Page

Accessed from Main menu links

FREQUENTLY ASKED QUESTIONS

Patients

- What is the Mycophenolate REMS ?

The Mycophenolate REMS has been designed to tell you about the risks of taking mycophenolate during pregnancy. Females taking mycophenolate while they are pregnant have a higher risk of miscarriage in the first 3 months. There is also a higher risk that the baby will have birth defects.

- Do I have to register in the Mycophenolate REMS as a patient?

Patients do not register in the Mycophenolate REMS.

If you become pregnant during treatment with mycophenolate or within 6 weeks after stopping treatment with mycophenolate, you should inform your doctor and participate in the Mycophenolate Pregnancy Registry. Participation is voluntary; however, the information you provide is important to the success of the program.

The Mycophenolate Pregnancy Registry collects information about pregnancies that occur during treatment with mycophenolate or within 6 weeks after stopping. The information from the Registry helps doctors and patients understand the effects of mycophenolate on pregnant females and their babies.

- Do I have to go to a certain pharmacy to get my prescription filled in the Mycophenolate REMS?

You can fill your prescription in any pharmacy.

- What forms of birth control should I use while taking mycophenolate?

You should talk with your doctor about what birth control is right for you. You can also get birth control information in the *Patient Information Brochure: What You Need To Know About Mycophenolate* brochure. This brochure is available from your doctor or can be viewed on this website.

If you are taking mycophenolate, and you are able to get pregnant, you must always use acceptable birth control:

- During your entire treatment with mycophenolate
- For 6 weeks after you stop taking mycophenolate

Unless you choose not to have sexual intercourse with a man at any time (abstinence), you must always use acceptable birth control.

- Where can I find more information about birth control options?

Talk with your doctor about birth control and what is best for you. You can also get birth control information in the *Patient Information Brochure: What You Need To Know About Mycophenolate* brochure. This brochure is available from your doctor and can also be viewed on this website.

- Where can I find more information about drugs and birth defects?

It is best if you talk with your doctor about your medicines and birth defects.

- What type of data is collected by the Mycophenolate Pregnancy Registry and who will see the data?

You can find information on the Registry on this website.

The Registry collects information about pregnancies that occur during treatment with mycophenolate or within 6 weeks after stopping. The information from the Registry helps doctors and patients understand the effects of mycophenolate on pregnant females and their babies.

The Registry reports information about an individual female's pregnancy to the maker of the mycophenolate medicine she took. The maker of the drug is required by the law to report the pregnancy to the government.

Summary information (without patient identifiers) may also be shared among makers of mycophenolate medicine who support the Mycophenolate REMS. They may choose to publish it in scientific journals.

- Where can I find more information about emergency contraception?

You can also contact Planned Parenthood at 1-800-230-PLAN (1-800-230-7526), online at www.plannedparenthood.org or text "PPNOW" to 774636 (PPINFO) to get answers (standard message and data rates may apply).

- How do I get more information about the Mycophenolate REMS?

You can talk with your doctor for more information.

- What if I become pregnant while on a mycophenolate containing medicine or after I stop taking a mycophenolate containing medicine?

If you get pregnant while taking mycophenolate or within 6 weeks after you stop, call your doctor right away. **Do not** stop taking your mycophenolate. Your doctor will talk with you about taking part in the Mycophenolate Pregnancy Registry.

- What is the Mycophenolate Pregnancy Registry?

The Registry collects information about pregnancies that occur during treatment with mycophenolate or within 6 weeks after stopping. The information from the Registry helps doctors and patients understand the effects of mycophenolate on pregnant females and their babies.

- Why should I take part in the Mycophenolate Pregnancy Registry?

The information you provide to the Registry will help us better understand the effects of mycophenolate in pregnancy.

When you take part in the Registry, you provide important information that may help you and other females who took mycophenolate during their pregnancies. Females taking mycophenolate while they are pregnant have a higher risk of miscarriage in the first 3 months. There is also a higher risk that the baby will have birth defects.

- Who can take part in the Mycophenolate Pregnancy Registry?

All females who are pregnant while taking the following medicines and all females who get pregnant within 6 weeks after stopping treatment:

- CellCept® (mycophenolate mofetil)
- Myfortic® (mycophenolic acid)
- Generic mycophenolate mofetil
- Generic mycophenolic acid

Tell your doctor right away if you get pregnant. Your doctor should report your pregnancy to the Registry. We encourage you to take part in the Registry. The information you provide to the Registry will help us better understand the effects of mycophenolate in pregnancy. All the information you provide will be kept private.

- What will I need to do if I participate in the Mycophenolate Pregnancy Registry?

There are a few simple steps to take.

1. Tell your doctor if you get pregnant
 - The Registry will contact you after speaking with your doctor.
2. Complete an *Informed Consent* form
 - The *Informed Consent* form will be mailed to you with a pre-addressed postage-paid return envelope.
 - The form tells you what to expect with the Registry. It tells you what your rights are.
 - By signing, you allow the Registry to ask you questions about your health and your baby's health. The Registry will also ask for information from your doctors.
3. Answer questions about your health and your baby's health
 - After the first 3 months of pregnancy.
 - 2 more times during the next 6 months of pregnancy.
 - At the time of expected delivery.
 - When your baby is 2 months, 6 months and 1 year.
4. Let the Registry know if your contact information changes
 - The Registry relies on your information to contact you.
 - If your contact information changes, please call 1-800-617-8191.

- What are my rights as a participant in the Mycophenolate Pregnancy Registry?

- You can quit at any time.
- Your privacy is protected.

- Whom can I contact for more information?

- Call 1-800-617-8191 and choose "Mycophenolate Pregnancy Registry" from the menu

- Are there other side effects that I should know about with a mycophenolate containing medicine?

For information on side effects, you can talk with your doctor, ask your pharmacist, read the mycophenolate Medication Guide or the Prescribing Information (PI).

- How should I store a mycophenolate containing medicine?

- Store your medication at room temperature (59°F to 86°F).
- Make sure the container is tightly closed.
- Keep mycophenolate and all medicines out of the reach of children.

- In addition to pregnancy, what should I avoid while taking mycophenolate?

For information on what to avoid when taking mycophenolate, talk with your doctor, ask your pharmacist, read the mycophenolate Medication Guide or the Prescribing Information (PI).

- How do I handle internet browser issues?

If you are experiencing browser issues, your browser (i.e., Microsoft Internet Explorer, Mozilla Firefox, or Apple Safari) may be disabling the Mycophenolate REMS site, or parts of the Mycophenolate REMS site. You can resolve this by

1. Disabling the pop-up blocker completely every time you need to use the site, or
2. Adding www.MycophenolateREMS.com into your browser's list of allowed sites.

If this does not resolve the issue, it is recommended that you use Internet Explorer 8.0.

- What materials will I receive from my doctor?

- *Patient Information Brochure: What You Need To Know About Mycophenolate*
This Brochure tells you what you need to know about the Mycophenolate REMS. It explains how the program works and what your role is.
- *Mycophenolate Pregnancy Registry Frequently Asked Questions for Patients*
Provides answers to frequently asked questions about the Registry.

• Prescribers

- Who is the Mycophenolate REMS for?

Mycophenolate REMS is designed to help inform prescribers, nurses, pharmacists, and females of reproductive potential of the risks associated with exposure to mycophenolate during pregnancy.

- Who can participate in the Mycophenolate Pregnancy Registry?

A female patient is considered eligible if she meets either of the following criteria:

- A patient who is or was pregnant and was exposed to at least 1 dose of mycophenolate during pregnancy
- A patient who got pregnant within 6 weeks following discontinuation of treatment

Patients who meet either of these criteria, regardless of indication, can participate. Patients whose pregnancy does not meet these criteria may not participate in the Mycophenolate Pregnancy Registry.

- Why is the Mycophenolate Pregnancy Registry important?

Exposure to mycophenolate during pregnancy is associated with:

- Increased risks of pregnancy loss during the first trimester
- Higher risk of congenital malformations
 - Ear abnormalities such as microtia
 - Facial deformities, including cleft lip and palate
 - Anomalies of the distal limbs, heart, esophagus, kidney, and nervous system

The Mycophenolate Pregnancy Registry will collect data to characterize the risks associated with exposure to mycophenolate during pregnancy or within 6 weeks following discontinuation of treatment, regardless of indication. There is no limit to the number or type of physicians and/or patients who may contribute data to the Mycophenolate Pregnancy Registry. All reports of potential maternal and fetal exposure to mycophenolate will be considered for the Mycophenolate Pregnancy Registry.

The success of the Mycophenolate Pregnancy Registry depends on the participation of both patients and healthcare providers. Healthcare providers should identify patients who are currently pregnant or who may have been exposed to mycophenolate while pregnant, inform them of the Mycophenolate Pregnancy Registry, and encourage them to participate in the Mycophenolate Pregnancy Registry. Healthcare providers should report any pregnancy that may involve exposure to mycophenolate, whether or not the patient chooses to participate. Patients should be informed that you will report any pregnancies of which you become aware to the Mycophenolate Pregnancy Registry.

- What is my role in the Mycophenolate Pregnancy Registry?

Instruct patients to tell you if they get pregnant during treatment with mycophenolate or within 6 weeks following discontinuation of treatment. If you learn that a patient is pregnant.

- Report the pregnancy to the Mycophenolate Pregnancy Registry
- Encourage the patient to participate in the Mycophenolate Pregnancy Registry and encourage patients to read the *Mycophenolate Pregnancy Registry Frequently Asked Questions for Patients* on this website

When you report an eligible pregnancy to the Mycophenolate Pregnancy Registry, you should provide your contact information. Also provide the Mycophenolate Pregnancy Registry with information about the pregnancy and the patient's contact information so that she can be called for follow-up for this safety study. Provision of patient contact and medical information to the Mycophenolate Pregnancy Registry is covered by an HIPAA waiver.

When patients participate in the Mycophenolate Pregnancy Registry, they agree to provide information about their pregnancy, including information about prenatal drug exposure of any duration, maternal demography and history, and maternal and fetal outcomes of pregnancies exposed to mycophenolate. Patients are encouraged to participate in the Mycophenolate Pregnancy Registry as soon as their pregnancy is known, preferably in the first trimester.

- After I report my patient's pregnancy, what will her participation involve?

The patient will be asked in telephone interviews to answer questions regarding her health and her baby's health. These interviews will take place during each trimester of pregnancy, near the expected time of delivery or at pregnancy outcome; and when the infant reaches 2 months, 6 months, and 1 year of age. Since the Mycophenolate Pregnancy Registry relies on being able to contact the patient, it is important for you to advise her to keep the Mycophenolate Pregnancy Registry informed of any changes to her contact information throughout her participation.

- After I enroll my patient, what is my role?

You will be asked to provide pregnancy and outcomes data on a paper-based case report form (CRF) and submit it via mail or fax, or enter the data into an electronic data capture (EDC) system. You must keep the Mycophenolate Pregnancy Registry informed of any changes to your contact information throughout your participation.

- How will data collected by the Mycophenolate Pregnancy Registry be analyzed and reported?

The Mycophenolate Pregnancy Registry program administrator will report personally identifiable pregnancy data to the appropriate drug manufacturer for purposes of reporting to regulatory agencies as required by law. Aggregated de-identified data may be shared among participating applicants of Mycophenolate REMS and/or submitted for publication in peer-reviewed scientific journals.

- Do I still report pregnancies to the National Transplantation Pregnancy Registry (NTPR)?

All pregnancies occurring during treatment with mycophenolate or within 6 weeks following discontinuation of treatment should be reported to the Mycophenolate Pregnancy Registry, regardless of indication, for inclusion and follow-up. In addition to reporting exposed pregnancies to the Mycophenolate Pregnancy Registry, you may also report pregnancies to the NTPR.

- How can I obtain more information?

- Visit www.MycophenolateREMS.com
- Call 1-800-617-8191

- What information is collected when a pregnancy is registered?

The Mycophenolate REMS Pregnancy Registry actively collects information on all pregnancies that occur during treatment or within 6 weeks of stopping treatment with Mycophenolate. For newly reported and ongoing pregnancies, questions are asked at baseline, first, 2nd, and 3rd trimesters, at time of expected delivery and at infant ages 2, 6, and 12 months. Data elements include but are not limited to:

- Demographics
- Mycophenolate exposure including dose and timing of exposure
- Maternal and fetal outcomes
- Root cause analysis (understand the circumstances that led to the fetal exposure)
- Frequency of educational counseling
- Infant development to age 12 months

▪ Pharmacists

- Do pharmacies have to register with the program?

No. Pharmacies do not register in the Mycophenolate REMS. Pharmacies are required to provide patients with the medication guide for a particular mycophenolate product when dispensing the drug.

- Does a pharmacy have to do anything special before filling a prescription?

The only requirement for pharmacies in the Mycophenolate REMS is to provide the patient with a medication guide when dispensing mycophenolate.

- How can I order more medication guides?

Additional medication guides can be ordered over the phone (1-800-617-8191).

- Will Mycophenolate REMS patients have a special card or ID Number?

No. Patients in the Mycophenolate REMS do not have cards or ID numbers.

- Can I accept mycophenolate prescriptions by phone, fax or email?

Yes. The Mycophenolate REMS does not affect a pharmacy's policy on how a prescription is received. You can accept a mycophenolate prescription by any means you would accept any other prescriptions.

- What information is collected when a pregnancy is registered?

The Mycophenolate REMS Pregnancy Registry actively collects information on all pregnancies that occur during treatment or within 6 weeks of stopping treatment with Mycophenolate. For newly reported and ongoing pregnancies, questions are asked at baseline, first, 2nd, and 3rd trimesters, at time of expected delivery and at infant ages 2, 6, and 12 months. Data elements include but are not limited to:

- Demographics
- Mycophenolate exposure including dose and timing of exposure
- Maternal and fetal outcomes
- Root cause analysis (understand the circumstances that led to the fetal exposure)
- Frequency of educational counseling
- Infant development to age 12 months

For completed pregnancies, the available information on the pregnancy outcome will be captured and any infant follow-up.

▪ Email

- Add Mycophenolate REMS to your safe senders

Listed below are steps to help with receiving emails from Mycophenolate REMS.

Because email clients differ, and spam filters sometimes filter legitimate email, Mycophenolate REMS suggests you add the Mycophenolate REMS domain to your Safe Senders list in your email client. This will minimize the chance that you'll miss Mycophenolate REMS emails.

For Outlook 2000 and Higher

1. Open the email from Mycophenolate REMS.
2. Click on the "Actions" menu on the top of your email window.
3. Choose "Junk Email."
4. Select "Add Senders Domain...to Safe Senders List" to add Mycophenolate REMS to your safe sender list.

Or Follow These Steps

1. Open the email from Mycophenolate REMS.
2. Right-click Mycophenolate REMS email address.
3. Click "Add to Contacts" in the short-cut menu.
4. Click "Save and Close."

Outlook Express (6+)

1. Open the email from Mycophenolate REMS.
2. Left-click Mycophenolate REMS icon, or right-click Mycophenolate REMS name.
3. Click "Add to Contacts."
4. Click "Save and Close."

AOL 9.0

1. Open the email from Mycophenolate REMS.
2. Click the "Add Address" icon.
3. Verify Mycophenolate REMS contact information.
4. Save it.

AOL WebMail

1. Open the email from Mycophenolate REMS.
2. Click on Mycophenolate REMS name and email address.
3. Click "Add to Address Book" in the window that appears.
4. Enter extra information as needed.
5. Click "Save."

Earthlink

1. Open the email from Mycophenolate REMS.
2. Click "Add to Address Book" in the email header.
3. Use the "Address Book Editor" to verify Mycophenolate REMS contact details, and click "Save."

Entourage

1. Open the email from Mycophenolate REMS.
2. Right-click Mycophenolate REMS email address.
3. Select "Add to Address Book" in the short-cut menu.
4. Verify Mycophenolate REMS contact details.
5. Click "Save."

Gmail

1. Open the email from Mycophenolate REMS.
2. Click "More Options" in the email header.
3. Click "Add Sender to Contacts List."

Hotmail

1. Open the email from Mycophenolate REMS.
2. Click "Save Address" in the toolbar.
3. Verify Mycophenolate REMS contact details.
4. Click "ok."

* Users may also white-list Mycophenolate REMS entire domain (everything behind the @ sign) using the "Safe List" feature under Options -> Mail -> Junk Email Protection.

Yahoo!

1. Open the email from Mycophenolate REMS.
2. Click "Add to Address Book" to the right, next to Mycophenolate REMS name.
3. Verify Mycophenolate REMS contact details.
4. Click "Add to Address Book."

MacMail

1. Open the email from Mycophenolate REMS.
2. Ctr-click Mycophenolate REMS email address and select "Open in Address Book."
3. Verify Mycophenolate REMS contact details.

PRESCRIBER TRAINING

Prescriber Training Confirmation

Read and acknowledge the following statements:

The FDA determined that a REMS (Risk Evaluation and Mitigation Strategy) is necessary to ensure that the benefits of mycophenolate outweigh the increased risks of first trimester pregnancy loss and congenital malformations associated with mycophenolate use during pregnancy.

Mycophenolate is available by prescription as

- CellCept® (mycophenolate mofetil)
- Myfortic® (mycophenolic acid)
- Generic mycophenolate mofetil
- Generic mycophenolic acid

As a prescriber of mycophenolate to female patients of reproductive potential,* I understand that I complete this Training Confirmation Form to document my training in the Mycophenolate REMS.

*A female of reproductive potential includes girls who have entered puberty and all females who have a uterus and have not passed through menopause.

I have agreed to do the following:

1. Read and understand the *Prescribing Information* for mycophenolate and the *Healthcare Provider Brochure*.
2. Understand the increased risks of first trimester pregnancy loss and congenital malformations associated with mycophenolate.
3. Educate females of reproductive potential on the risks associated with exposure to mycophenolate during pregnancy.
4. Provide the *Patient Information Brochure: What You Need To Know About Mycophenolate* booklet to females of reproductive potential.
5. Provide contraceptive counseling to patients directly or by partnering with an OB/GYN.
6. Only prescribe mycophenolate to a pregnant patient if the benefits of initiating or continuing mycophenolate treatment outweigh the risk of fetal harm.
7. Discuss alternative treatments to mycophenolate with females of reproductive potential who are pregnant or considering pregnancy.
8. Follow the pregnancy testing recommendations as outlined in the *Prescribing Information* for mycophenolate and the *Healthcare Provider Brochure*.
9. Report to the Mycophenolate Pregnancy Registry any pregnancies that occur during mycophenolate treatment or within 6 weeks following discontinuation of treatment. Encourage pregnant patients to participate in the Mycophenolate Pregnancy Registry.

I understand that I may be contacted in the future for items pertaining to the administration of the Mycophenolate REMS.

I acknowledge that by completing this Prescriber Training Confirmation Form I attest to follow the Mycophenolate REMS requirements outlined above.
